Select Dissertations from the Amoenitates Academicæ Carl von Linné, 1781 *Select Dissertations from the Amoenitates Academicæ* Carl von Linné, 1781 **Select Dissertations From the Amoenitates Academicæ** Benjamin Stillingfleet, Carl Von Linné, 2018-10-10 This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public To ensure a quality reading experience this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy to read typeface We appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant *Foundations for Advancing Animal Ecology* Michael L. Morrison, Leonard A. Brennan, Bruce G. Marcot, William M. Block, Kevin S. McKelvey, 2020-10-13 A look at how wildlife professionals can modernize their approaches to habitat and population management with a fresh take on animal ecology How can we maximize the probability that a species of wild animal will persist into the future This audacious book proposes that advancing animal ecology and conservation itself demands that we reenvision our basic understanding of how animals interact with their environments and with each other Synthesizing where we are and where we need to go with our studies of animals and their environs Foundations for Advancing Animal Ecology asserts that studies of animal ecology should begin with a focus on the behaviors and characteristics of individual organisms The book examines the limitations of classic approaches to the study of animal ecology how organisms organize into collections such as breeding pairs flocks and herds how the broader biotic and abiotic environment shapes animal populations communities and ecosystems factors underlying the distribution and abundance of species through space and time the links between habitat and population why communication between researchers and managers is key specific strategies for managing wild animal populations and habitats in an evolutionary and ecosystem context Throughout the authors stress the importance of speaking a common and well defined language Avoiding vague and misleading terminology they argue will help ecologists translate science into meaningful and lasting actions in the environment Taking the perspective of the organism of interest in developing concepts and applications the authors always keep the potentially biased human perspective in focus A major advancement in understanding the factors underlying wildlife habitat relationships Foundations for Advancing Animal Ecology will be an invaluable resource to professionals and practitioners in natural resource management in public and private sectors including state and federal agencies non governmental organizations and environmental consultants *Utopia's Garden* E. C. Spary, 2010-12-15 The royal Parisian botanical garden the Jardin du Roi was a jewel in the crown of the French Old Regime praised by both rulers and scientific

practitioners Yet unlike many such institutions the Jardin not only survived the French Revolution but by 1800 had become the world's leading public establishment of natural history the *Muséum d'Histoire Naturelle* E C Spary traces the scientific administrative and political strategies that enabled the foundation of the *Muséum* arguing that agriculture and animal breeding rank alongside classification and collections in explaining why natural history was important for French rulers But the *Muséum*'s success was also a consequence of its employees Revolutionary rhetoric by displaying the natural order they suggested the institution could assist in fashioning a self educating self policing Republican people Natural history was presented as an indispensable source of national prosperity and individual virtue Spary's fascinating account opens a new chapter in the history of France science and the Enlightenment

Contagionism Catches On Margaret

DeLacy, 2017-07-25 This book shows how contagionism evolved in eighteenth century Britain and describes the consequences of this evolution By the late eighteenth century the British medical profession was divided between traditionalists who attributed acute diseases to the interaction of internal imbalances with external factors such as weather and reformers who blamed contagious pathogens The reformers who were often outsiders English Nonconformists or men born outside England emerged from three coincidental transformations transformation in medical ideas in the nature and content of medical education and in the sort of men who became physicians Adopting contagionism led them to see acute diseases as separate entities spurring a process that reoriented medical research changed communities established new medical institutions and continues to the present day

Current Catalog

National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70 *A Cultural History of Heredity* Staffan Müller-Wille, Hans-Jörg Rheinberger, 2020-03-04 Thought provoking any scientist interested in genetics will find this an enlightening look at the history of this field *Quarterly Review of Biology* It was only around 1800 that heredity began to enter debates among physicians breeders and naturalists Soon thereafter it evolved into one of the most fundamental concepts of biology Here Staffan Müller Wille and Hans Jörg Rheinberger offer a succinct cultural history of the scientific concept of heredity They outline the dramatic changes the idea has undergone since the early modern period and describe the political and technological developments that brought about these changes They begin with an account of premodern theories of generation showing that these were concerned with the procreation of individuals rather than with hereditary transmission and reveal that when hereditarian thinking first emerged it did so in a variety of cultural domains such as politics and law medicine natural history breeding and anthropology The authors then track theories of heredity from the late nineteenth century when leading biologists considered it in light of growing societal concerns with race and eugenics through the rise of classical and molecular genetics in the twentieth century to today as researchers apply sophisticated information technologies to understand heredity What we come to see from this exquisite history is why it took such a long time for heredity to become a prominent concept in the life sciences and why it gained such overwhelming importance in those sciences and the broader culture over the last two centuries

Analytical Biogeography

A.A. Myers, P. Giller, 2013-12-11 Biogeography may be defined simply as the study of the geographical distribution of organisms but this simple definition hides the great complexity of the subject Biogeography transcends classical subject areas and involves a range of scientific disciplines that includes geography geology and biology Not surprisingly therefore it means rather different things to different people Historically the study of biogeography has been concentrated into compartments at separate points along a spatio temporal gradient At one end of the gradient ecological biogeography is concerned with ecological processes occurring over short temporal and small spatial scales whilst at the other end historical biogeography is concerned with evolutionary processes over millions of years on a large often global scale Between these end points lies a third major compartment concerned with the profound effects of Pleistocene glaciations and how these have affected the distribution of recent organisms Within each of these compartments along the scale gradient a large number of theories hypotheses and models have been proposed in an attempt to explain the present and past biotic distribution patterns To a large extent these compartments of the subject have been non interactive which is understandable from the different interests and backgrounds of the various researchers Nevertheless the distributions of organisms across the globe cannot be fully understood without a knowledge of the full spectrum of ecological and historical processes There are no degrees in biogeography and today's biogeographers are primarily born out of some other discipline Essays Henry D.

Thoreau, 2013-05-21 *DIV A treasure trove of Thoreau's most noteworthy essays with plentiful annotations by leading Thoreau scholar Jeffrey S Cramer* *div Foundations of Biogeography* Mark V. Lomolino, Dov F. Sax, James H. Brown, 2004-07 *Foundations of Biogeography* provides facsimile reprints of seventy two works that have proven fundamental to the development of the field From classics by Georges Louis LeClerc Comte de Buffon Alexander von Humboldt and Charles Darwin to equally seminal contributions by Ernst Mayr Robert MacArthur and E O Wilson these papers and book excerpts not only reveal biogeography's historical roots but also trace its theoretical and empirical development Selected and introduced by leading biogeographers the articles cover a wide variety of taxonomic groups habitat types and geographic regions *Foundations of Biogeography* will be an ideal introduction to the field for beginning students and an essential reference for established scholars of biogeography ecology and evolution List of Contributors John C Briggs James H Brown Vicki A Funk Paul S Giller Nicholas J Gotelli Lawrence R Heaney Robert Hengeveld Christopher J Humphries Mark V Lomolino Alan A Myers Brett R Riddle Dov F Sax Geerat J Vermeij Robert J Whittaker Victorian Science and Literature, Part I Vol 3 Gowan Dawson, Bernard Lightman, Piers J Hale, Jonathan Smith, Suzy Anger, James Paradis, Richard England, Jude V Nixon, David Amigoni, James Elwick, 2024-10-28 This eight volume reset edition in two parts collects rare primary sources on Victorian science literature and culture The sources cover both scientific writing that has an aesthetic component what might be called the literature of science and more overtly literary texts that deal with scientific matters *The Life of Governor Joan Gideon Loten (1710-1789)* Alexander J. Dutch East Indies Company It contains an inventory of his natural history drawings in the London Natural History Museum and Teylers Museum at Haarlem a valuable treasure of eighteenth century natural history of Sri Lanka and Indonesia Loten s writings quoted extensively in this biography cover early eighteenth century narrow minded provincial Utrecht in the Dutch Republic the exotic Dutch East Indies and cosmopolitan London in the latter part of the century *Nature, Empire, and Nation* Jorge Cañizares-Esguerra,2006 This collection of essays explores two traditions of interpreting and manipulating nature in the early modern and nineteenth century Iberian world one instrumental and imperial the other patriotic and national Imperial representations laid the ground for the epistemological transformations of the so called Scientific Revolutions The patriotic narratives lie at the core of the first modern representations of the racialized body Humboldtian theories of biodistribution and views of the landscape as a historical text representing different layers of historical memory

Hurricane Lizards and Plastic Squid Thor Hanson,2021-09-28 A New York Times Editor s Choice pick Shortlisted for the 2022 Pacific Northwest Book Awards A beloved natural historian explores how climate change is driving evolution In Hurricane Lizards and Plastic Squid biologist Thor Hanson tells the remarkable story of how plants and animals are responding to climate change adjusting evolving and sometimes dying out Anole lizards have grown larger toe pads to grip more tightly in frequent hurricanes Warm waters cause the development of Humboldt squid to alter so dramatically that fishermen mistake them for different species Brown pelicans move north and long spined sea urchins south to find cooler homes And when coral reefs sicken they leave no territory worth fighting for so aggressive butterfly fish transform instantly into pacifists A story of hope resilience and risk Hurricane Lizards and Plastic Squid is natural history for readers of Bernd Heinrich Robin Wall Kimmerer and David Haskell It is also a reminder of how unpredictable climate change is as it interacts with the messy lattice of life Science, Optics, and Music in Medieval and Early Modern Thought Alistair Cameron

Crombie,1990-01-01 A C Crombie is one of the best known writers on the history of Science Science Optics and Music in Medieval and Early Modern Thought brings together a coherent body of essays that complement his books and are of independent value A C Crombie traces general themes in the development of Science the Aristotelian inheritance and the importance of the search for logical explanation in the middle ages the ambitions and limitations of experiment and quantification changing attitudes to scientific progress the relations between Science and the Arts and between Mathematics Music and Medical Science and the study of the senses In particular he shows how the mechanistic hypothesis stimulated the experimental and philosophical study of vision **The History and Philosophy of Science: A Reader** Daniel

McKaughan,Holly VandeWall,2018-01-11 The History and Philosophy of Science A Reader brings together seminal texts from antiquity to the end of the nineteenth century and makes them accessible in one volume for the first time With readings from Aristotle Aquinas Copernicus Galileo Descartes Newton Lavoisier Linnaeus Darwin Faraday and Maxwell it analyses and discusses major classical medieval and modern texts and figures from the natural sciences Grouped by topic to clarify the

development of methods and disciplines and the unification of theories each section includes an introduction suggestions for further reading and end of section discussion questions allowing students to develop the skills needed to read interpret and critically engage with central problems and ideas from the history and philosophy of science understand and evaluate scientific material found in a wide variety of professional and popular settings appreciate the social and cultural context in which scientific ideas emerge identify the roles that mathematics plays in scientific inquiry Featuring primary sources in all the core scientific fields astronomy physics chemistry and the life sciences The History and Philosophy of Science A Reader is ideal for students looking to better understand the origins of natural science and the questions asked throughout its history By taking a thematic approach to introduce influential assumptions methods and answers this reader illustrates the implications of an impressive range of values and ideas across the history and philosophy of Western science

The Biology of Mutualism Douglas H. Boucher, 1985 The view of nature as red in tooth and claw as a jungle in which competition and predation are the predominant themes has long been important in both the scientific and popular literature However in the past decade another view has become widespread among ecologists the idea that mutualisms mutually beneficial interactions between species are just as important as competition and predation This book is one of the first to explore this theme Ideas and theories applicable to all sorts of mutualisms are presented and where appropriate examined in the light of concrete data Themes explored include the organisms involved both animal and plant how specializations evolved once mutualisms formed how mutualisms affect population dynamics and community structure and the role of mutualisms in different environments The book will be of special interest to ecologists and a wide range of biologists

The Journeys of Trees: A Story about Forests, People, and the Future Zach St. George, 2020-07-14 An urgent and illuminating portrait of forest migration and of the people studying the forests of the past protecting the forests of the present and planting the forests of the future Forests are restless Any time a tree dies or a new one sprouts the forest that includes it has shifted When new trees sprout in the same direction the whole forest begins to migrate sometimes at astonishing rates Today however an array of obstacles humans felling trees by the billions invasive pests transported through global trade threaten to overwhelm these vital movements Worst of all the climate is changing faster than ever before and forests are struggling to keep up A deft blend of science reporting and travel writing The Journeys of Trees explores the evolving movements of forests by focusing on five trees giant sequoia ash black spruce Florida torreya and Monterey pine Journalist Zach St George visits these trees in forests across continents finding sequoias losing their needles in California fossil records showing the paths of ancient forests in Alaska domesticated pines in New Zealand and tender new sprouts of blight resistant American chestnuts in New Hampshire Everywhere he goes St George meets lively people on conservation s front lines from an ecologist studying droughts to an evolutionary evangelist with plans to save a dying species He treks through the woods with activists biologists and foresters each with their own role to play in the fight for the uncertain future of our environment An

eye opening investigation into forest migration past and present The Journeys of Trees examines how we can all help our trees and our planet survive and thrive Select Dissertations from the Amoenitates Academicæ, a Supplement to Mr. Stillingfleet's Tracts Relating to Natural History Carl von Linné, John Brand, 1781
