Onshore Offshore Relationships On The North Atlantic Margin:

Onshore-Offshore Relationships on the North Atlantic Margin B.T.G. Wandås, J.P. Nystuen, E. Eide, F.M.

Gradstein, 2005-06-07 This book includes a selection of oral and poster presentations from Onshore Offshore Relationships on the Nordic Margin Conference held in Trondheim in 2002. The conference was jointly arranged by the Norwegian Geological Society NGF and the Norwegian Petroleum Society NPF and attempted through different thematic sessions to bridge the gap often noted between industry and academic research. The first part of the conference included presentations under the theme Basement control on offshore structuring with representative articles from that segment included in this book and covering topics that range from analysis of vertical movements of basement substrates to the deep structural architecture of the Norwegian Sea to the development of the Jan Mayen microcontinent. These papers set the scene for the second segment of the conference Linking uplift and erosion with subsidence and deposition that in the present book include articles related to the Triassic to Present day infill history in the Norwegian and northern North Seas. The last segment of the conference addressed New challenges with respect to natural features of the deep water areas that necessitate particular consideration and innovation on the part of research and industry to mitigate risk and maximize returns from field development. In this book the articles addressing this theme present analyses of the enormous submarine slides that took place during the Holocene in the Norwegian Sea and are of particular interest to the developers of the Ormen Lange gas field. Other articles address the occurrences of gas hydrates in the near sea floor and the challenges presented in identifying and protecting the Lophelia cold water reefs in the region. Processes creating the structural framework for the deposition and depositional patterns in the Norwegian Sea and northern North Sea. Erosion and subsequent deposition of sediments in the subsiding deep water basins in the Norwegian Sea area and northern North Sea. Challenges the oil industry has met in the deep water areas of the Norwegian continental shelf. *Exhumation of the North Atlantic Margin* Anthony G. Doré, 2002 **Cross**

Border Themes in Petroleum Geology I: The North Sea S. Patruno, S. G. Archer, D. Chiarella, J. A. Howell, C. A.-L. Jackson, H. Kombrink, 2022 A cross border approach to exploration appraisal and development is important in mature basins such as the North Sea where the low hanging fruit have long gone. This approach emphasizes the need to see the basin as one geological entity in order to maximize economic recovery and prepare the area for the energy transition. This volume offers an up to date geology without borders view of the stratigraphy sedimentology tectonics and oil and gas exploration trends of the entire North Sea basin along with the challenges associated with differences in data continuity and nomenclature across median lines. This volume includes overviews of cross border play statistics lithostratigraphic naming conventions and exploration performance through to new facies models for cross border areas. As such this volume will be a valuable reference for every geoscientist working in the North Sea for years to come. Continental Rifted Margins 2 Gwenn Peron-Pinvidic, 2022-05-23 Rifted margins mark the transition between continents and oceans which are the two first order

types of land masses on Earth. Rifted margins contribute to our understanding of lithospheric extensional processes and are studied by various disciplines of Earth Science: geology, geophysics, geochemistry. Thanks to better and wider public access to high quality data, our understanding in these areas has improved significantly over these last two decades. This book summarizes this knowledge evolution and details where we stand today with a series of case examples included. It is structured in a practical way with concise text descriptions and comprehensive diagrams. *Continental Rifted Margins 2* is a useful resource for students and newcomers to the rifted margin community, a cookbook of sorts to facilitate the reading of scientific publications and provide basic definitions and explanations. **NordMin 2013-2017** Weihed, Pär

,Christakopoulou, Betty, 2017-04-30. NordMin started in 2013 as a project under the auspices of the Nordic Council of Ministers with the aim to strengthen Nordic collaboration for a sustainable Mining and Minerals industry in the Nordic countries. NordMin was initiated by the Swedish chairmanship of the Nordic Council as a strategic initiative with a duration of 4 years. The project management has been hosted by Luleå University of Technology and a number of activities have been rolled out over the last few years. The aim of this report is to give a brief overview of NordMin activities and also to draw some final conclusions on what has been achieved in terms of a closer Nordic collaboration within the field and how we can benefit from this in the future. **Onshore-offshore Relationships on the North Atlantic Margin** Terje Thorsnes, 2002

A revised correlation of Tertiary rocks in the British Isles and adjacent areas of NW Europe C. King, 2016-01-05. This Special Report comprehensively describes the stratigraphy and correlation of the Tertiary Paleogene-Neogene rocks of NW Europe and the adjacent Atlantic Ocean and is the summation of fifty years of research on Tertiary sediments by Chris King. His book is essential reading for all geologists who deal with Tertiary rocks across NW Europe, including those in the petroleum industry and geotechnical services as well as academic stratigraphers and palaeontologists. Introductory sections on chronostratigraphy, biostratigraphy and other methods of dating and correlation are followed by a regional summary of Tertiary sedimentary basins and their framework and an introduction to Tertiary igneous rocks. The third and largest segment comprises the regional stratigraphic summaries. Regions covered are the North Sea Basin, onshore areas of southern England and the eastern English Channel area, the North Atlantic margins including non-marine basins in the Irish Sea and elsewhere, and the Paleogene igneous rocks of Scotland. *Continental Rifted Margins 1* Gwenn Peron-Pinvidic, 2022-06-03. students and newcomers to the rifted margin community a cookbook of sorts to facilitate the reading of scientific publications and provide basic definitions and explanations *Economic Geology of Natural Gas Hydrate* Michael D. Max, Arthur H. Johnson, William P. Dillon, 2006-07-09 This book is a companion to *Natural Gas Hydrate in Oceanic and Permafrost Environments* Max 2000 2003 which is the first book on gas hydrate in this series Although other gases can naturally form clathrate hydrates referred to after as hydrate we are concerned here only with hydrocarbon gases that form hydrates The most important of these natural gases is methane Whereas the first book is a general introduction to the subject of natural gas hydrate this book focuses on the geology and geochemical controls of gas hydrate development and on gas extraction from naturally occurring hydrocarbon hydrates This is the first broad treatment of gas hydrate as a natural resource within an economic geological framework This book is written mainly to stand alone for brevity and to minimize duplication Information in Max 2000 2003 should also be consulted for completeness Hydrate is a type of clathrate Sloan 1998 that is formed from a cage structure of water molecules in which gas molecules occupying void sites within the cages stabilize the structure through van der Waals or hydrogen bonding *New Frontiers in Integrated Solid Earth Sciences* S.A.P.L. Cloetingh, Jorg Negendank, 2009-12-01 Man's intensifying use of the Earth's habitat has led to an urgent need for scientifically advanced geo prediction systems that accurately locate subsurface resources and forecast the timing and magnitude of earthquakes volcanic eruptions and land subsidence As advances in the earth sciences lead to process oriented ways of modeling the complex processes in the solid Earth the papers in this volume provide a survey of some recent developments at the leading edge of this highly technical discipline The chapters cover current research in predicting the future behavior of geologic systems as well as the mapping of geologic patterns that exist now in the subsurface as frozen evidence of the past Both techniques are highly relevant to humanity's need for resources such as water and will also help us control environmental degradation The book also discusses advances made in seismological methods to obtain information on the 3D structure of the mantle and the lithosphere and in the quantitative understanding of lithospheric scale processes It covers recent breakthroughs in 3D seismic imaging that have enhanced the spatial resolution of these structural processes and the move towards 4D imaging that measures these processes over time The new frontier in modern Earth sciences described in this book has major implications for oceanographic and atmospheric sciences and our understanding of climate variability It brings readers right up to date with the research in this vital field *Ormen Lange* A. Solheim, P. Bryn, K. Berg, H.P. Sejrup, J. Mienert, 2005-07-29 Great effort has been undertaken to investigate potential geohazards in relation to the development of the Ormen Lange gas field offshore Mid Norway The field is located in the scar left after the giant tsunami generating Storegga Slide which occurred roughly 8200 years ago and the slide risk has consequently received particular focus The studies have been multi disciplinary in character and have involved a number of companies universities and research institutions The results of the project led to a significant advance in the understanding of the Storegga Slide in

particular and submarine slope instability in general and played an important role in the approval of field development by Norwegian authorities This book comprises 26 individual contributions representing the wide span of topics addressed in the project The main scope is to provide a state of the art report on geohazard investigations in a high latitude continental margin setting Most of the data and results published in this book would not have reached beyond the confidential report stage unless the license partners of the Ormen Lange license had agreed that this information deserves a wider audience Multidisciplinary and covers most themes treated in slope stability studies prior to the field development phase Provides a link between basic research and applied geohazard studies with direct relevance for risk evaluation in relation to field development activities such as pipeline design drilling of wells structure foundation etc A state of the art report on geohazard investigations in a high latitude continental margin setting in relation to field development activities

The NE Atlantic Region G. Péron-Pinvidic, J.R. Hopper, M.S. Stoker, C. Gaina, J.C. Doornenbal, T. Funck, U.E. Ártíng, 2017-10-30 The NAG TEC project was a collaborative effort by the British Geological Survey, the Geological Survey of Denmark and Greenland, the Geological Survey of Ireland, the Geological Survey of the Netherlands, the Geological Survey of Northern Ireland, the Geological Survey of Norway, Iceland GeoSurvey and the Faroese Geological Survey, Jar feingi along with a number of academic partners and significant support from industry. The main focus was to investigate the tectonic evolution of the region with a particular emphasis on basin evolution along conjugate margins. A key outcome was the development of a new tectonostratigraphic atlas and database that includes comprehensive geological and geophysical information relevant for understanding the Devonian to present evolution of the NE Atlantic margins. These provide the foundation upon which ongoing research and exploration of the area can build. This Special Publication provides some of the first scientific results and analysis based on the project, including regional stratigraphic analysis and correlations, crustal structure and interpretation of geophysical data sets, plate kinematics and the evolution of igneous provinces.

This Volcanic Isle Robert Muir-Wood, 2024-03-20 From the natural geometry of the Giant's Causeway to the sarsen slabs used to build Stonehenge, we are surrounded by evidence for the extraordinary geological forces that shaped the British Isles. Running coast to coast through Devon is Sticklepath Britain's San Andreas, a geological fault with the two sides displaced horizontally by several kilometres, all within the recent geological past. The Sticklepath Fault is just one manifestation of the rich tectonic history of the British region since the asteroid collision that ended the reign of the dinosaurs 66 million years ago. Raised out of the Chalk Sea, the original Albion was a thickly forested island a thousand kilometres long, surrounded by chalk cliffs punctuated with great volcanoes and the site of two tectonic spreading ridge plate boundaries. As the volcanoes shifted west and Greenland separated from Europe, the wind-blown volcanic ash laid the strata on which London was founded. The vertical Needles, known to every Isle of Wight sailor, are part of the northern foothills of the Pyrenees. When the collision subsided, rifting created a garland of Celtic lakes from Brittany to the Outer Hebrides. In *This Volcanic Isle*, Robert Muir Wood explores the rich geological history of the British Isles and its resulting legacy. Along the way, he introduces the personalities who shared a fascination for Britain's tectonic history, including Charles Darwin, the geologist; Tennyson, the science poet; and Benoit Mandelbrot, the pure mathematician who labelled the west coast of Britain a fractal icon. Here is the previously untold story of how earthquakes and eruptions, plumes and plate boundaries

Petroleum Geology of NW Europe was held in September 2015 and marked the 50th anniversary of the first commercial discovery offshore in the North Sea West Sole in September 1965. Its focus was 50 Years of Learning a Platform for Present Value and Future Success and its objective was to provide an update on discoveries, developments, technologies and geological concepts from the region. The 39 extensively illustrated technical papers cover the full width of recent activity and are divided into the following sections: Plays and fairways, Play assessment, Recent successes and learnings from failures, Infrastructure led exploration and development, Late life fields re development and the next life, Onshore exploration and development. The proceedings volume follows the format of many of the previous conferences since the first in 1974. Collectively these provide a unique documentation of the discovery and development of several NW European hydrocarbon provinces. The volume will be of interest to all geoscientists involved in exploration and development in NW Europe. It provides a fascinating overview of how creativity can continue to reveal hidden resources in an area that has been called mature for at least the last 20 of its 50 year history.
