Plan Graphics For The Landscape Designer With Section Drawing And Computer Graphics:

Plan Graphics for the Landscape Designer Tony Bertauski, 2018-01-03 Many landscape architects and designers embrace an artistic approach to design. Maintaining that loose aesthetic appeal requires landscape design students to not only master the essentials of design but also fundamental drawing skills. Tony Bertauski introduces aspiring designers to the techniques of drawing, leading them from no knowledge of the craft to a final plan drawing of professional quality. Throughout, he emphasizes that a drawn landscape plan has not only aesthetic value but also communicates effectively with clients. With step-by-step illustrations, readers will learn to use drafting tools to set up drawings, letter professionally, draw symbols and textures to illustrate plants and hardscapes, label plan drawings accurately, and draw to scale. Develop section drawings to communicate vertical design elements, enhance drawings using design software.

Plan Graphics for the Landscape Designer Tony Bertauski, 2019-01-10 Many professional landscape architects and designers embrace the practice of rendering plan drawings by hand as an artistic approach that supports the design process. Tony Bertauski uses abundant illustrations to train aspiring designers in the essential drawing techniques used to craft presentation graphics while learning the essentials of design. He guides students through the tools and techniques of drawing that are often overlooked in the classroom so that students can complete assignments on their own outside the lab. Student designers will learn to create plans that not only appeal aesthetically but also communicate effectively with clients.

Plan and Section Drawing Thomas C. Wang, 1979 The Second Edition of this classic comprehensive guide to plan and section drawing has been completely updated to serve the needs of today's architects and landscape architects. Sweeping stylistic and technical advances made since its original publication fifteen years ago are added to this new edition, which also includes new chapters on process and computer graphics.

Visualizing Landscape Architecture Elke Mertens, 2009-10-16 We don't sell gardens; we sell images of gardens. This observation on the part of a landscape architect makes it clear just how important it is that a design be effectively communicated to the community, clients, and the public. Drawings, models, simulations, and films communicate the designers' proposed ideas and solutions, but they also convey their attitude toward the use of nature and the environment. With myriad possibilities, including computer programs as well as hand drawings and models, which continue to be widely used, and strong competition in the field, there is now a huge variety of visual representations with agreed-upon rules but also a great deal of freedom. In three large sections, this book sifts through the currently commonplace and available techniques and evaluates them in terms of their informative value and persuasive power, always illustrating its points with analysis of examples from international firms. An introductory look at the development thus far is followed by a systematic presentation of modes of representation in two, three, and four dimensions: in the plane, in space, and in the temporal process. The second section deals with the sequence within the workflow, from the initial sketch through concept and implementation planning all the way to the finished product. The third section deals with the strategic use of visualizations in the context of competitions.
