**In War and Peace** Guy Stever,2002-10-07 Science came into Guy Stever s life as a pure and peaceful pursuit It was only later as he walked through the wreckage of wartime London that he began to see science as central to a desperate struggle to survive Past president of Carnegie Mellon University former Chief Scientist of the U S Air Force one time Director of the National Science Foundation professor at MIT for 20 years member of the National Academies of Sciences and Engineering and science advisor to two presidents Guy Stever was a central figure in twentieth century science consistently on the front lines changing the fate of a nation In this thoughtful and candid memoir Stever recounts an extraordinary life that reveals as much about the man as about the major scientific and technological events of his day Born of humble origins and orphaned at an early age Stever journeyed from a small town in New York to work alongside British comrades who were developing and refining the critical radar technology that was to turn the tide of the war against the Germans As a technical intelligence officer these harrowing wartime years took him from the beachheads of Normandy to the German slave labor factories responsible for building the V 2 rockets Stever returned home committed to serving his country He became intimately involved in America s nascent guided missile program and was to remain a key player in the anti ballistic missile defense program that heralded the era of the Cold War As the decades passed Stever continued to exert lasting influence on countless scientific endeavors He was instrumental in the formation of new institutions from the creation of NASA in the post Sputnik years to the merging of Carnegie Tech and the Mellon Institution giving birth to Carnegie Mellon University As Presidential Science Advisor to both Nixon and Ford Stever shaped the very structure of contemporary presidential science advising And he was to chair the oversight committee that redesigned the space shuttle boosters after the Challenger explosion Guy Stever s life offers remarkable insight into the twentieth century Through his eyes we relive the history of the past 50 years witnesses to a tale of science and technology

that is revealing in its scope and sweep      **Science, Money, and Politics** Daniel S. Greenberg, 2003-04-15 Greenberg explores how scientific research is funded in the United States including why the political process distributes the funds the way it does and how it can be corrupted by special interests in academia business and political machines      *Improving School-to-Work Transitions* David Neumark, 2007-01-09 As anxieties about America's economic competitiveness mounted in the 1980s so too did concerns that the nation's schools were not adequately preparing young people for the modern workplace Spurred by widespread joblessness and job instability among young adults the federal government launched ambitious educational reforms in the 1990s to promote career development activities for students In recent years however the federal government has shifted its focus to test based reforms like No Child Left Behind that emphasize purely academic subjects At this critical juncture in education reform *Improving School To Work Transitions* edited by David Neumark weighs the successes and failures of the 90s era school to work initiatives and assesses how high schools colleges and government can help youths make a smoother transition into stable well paying employment Drawing on evidence from national longitudinal studies surveys interviews and case studies the contributors to *Improving School To Work Transitions* offer thought provoking perspectives on a variety of aspects of the school to work problem Deborah Reed Christopher Jepsen and Laura Hill emphasize the importance of focusing school to work programs on the diverse needs of different demographic groups particularly immigrants who represent a growing proportion of the youth population David Neumark and Donna Rothstein investigate the impact of school to work programs on the forgotten half students at the greatest risk of not attending college Using data from the 1997 National Longitudinal Study of Youth they find that participation by these students in programs like job shadowing mentoring and summer internships raise employment and college attendance rates among men and earnings among women In a study of nine high schools with National Academy Foundation career academies Terry Orr and her fellow researchers find that career academy participants are more engaged in school and are more likely to attend a four year college than their peers Nan Maxwell studies the skills demanded in entry level jobs and finds that many supposedly low skilled jobs actually demand extensive skills in reading writing and math as well as the new basic skills of communication and problem solving Maxwell recommends that school districts collaborate with researchers to identify which skills are most in demand in their local labor markets At a time when test based educational reforms are making career development programs increasingly vulnerable it is worth examining the possibilities and challenges of integrating career related learning into the school environment Written for educators policymakers researchers and anyone concerned about how schools are shaping the economic opportunities of young people *Improving School To Work Transitions* provides an authoritative guide to a crucial issue in education reform      Measuring and Sustaining the New Economy National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, 2002-03-08 Sustaining the New Economy will require public policies that remain relevant to the rapid technological changes that characterize it While data

and its timely analysis are key to effective policy making we do not yet have adequate statistical images capturing changes in productivity and growth brought about by the information technology revolution This report on a STEP workshop highlights the need for more information and the challenges faced in measuring the New Economy and sustaining its growth
