Men Under the Sea Edward Ellsberg,2014-06-24

Ellsberg's writings chronicled his experiences and attitudes on the topic of marine salvage in a manner which has no equal in naval literature. War History Online Commander Edward Ellsberg rose to fame after leading the harrowing effort to raise the sunken submarine S 51 just off Long Island. That is where he begins *Men Under the Sea*, his tribute to and history of the men who risk everything to plunge into the blackness of the deep sea. Ellsberg holds an expert's knowledge of deep sea salvage and that knowledge has put him repeatedly on the front lines of some of the world's worst wrecks. After the S 51, Ellsberg goes on to the heartrending tale of the sinking of the submarine S 4 which sank after a collision with forty sailors aboard. Commander Ellsberg races to the scene through land, air, and sea to search for potential survivors trapped aboard the sunken sub. Ellsberg also regales readers with stories of some of the most famous underwater missions in history, such as men submerging deep to recover 5 million worth of gold from the wreck of the *Laurentic*, bringing vast treasures from the ocean bottom and diving to rescue thirty-three survivors from the stricken submarine *Squalus*. Ellsberg's passion, experience, and natural narrative talent turn *Men Under the Sea* into an unforgettable voyage.

Underwater Physiology C. J. Lambertsen,2013-10-22

Underwater Physiology is a collection of papers that deals with the physiologically limiting effects of undersea high pressure exposure, ranging from fundamental biological reactions through integration of physiological stresses and to limits actually experienced in deep diving. Papers discuss oxygen, the mechanisms of toxicity, and the effects of oxygen on cells and systems such as its pathological and physiological influences in the neurosensory ocular tissue. Other papers discuss the physical effects of pressure and gases on cellular function, protein structure, and the possibility of alleviating symptoms through the administration of drugs. Tests in mice show that various gases exhibit qualitative and semi-quantitative differences in the characteristics of sickness reactions to hypoxia and the time before the onset of symptoms. A computer programmed for nonlinear gas transfer and other variables running in real time can compute directly from the breathing mixture and provide a real time solution to decompression sickness under various conditions. A combined therapeutic approach, recompression and dextran, an effective lipemic clearing agent, should be capable of treating decompression sickness in humans. Other papers investigate the influence of inert gases and pressure on the central nervous system as well as situations in undersea and manned chamber operations. This collection can prove valuable for physiologists, biochemists, cellular biologists, and researchers involved in deep sea diving.
