Abstract

This study investigates differences and similarities in coping responses to peer victimization and the way culture is reflected in the social cognitions adolescents used in choosing their coping responses through a mixed-method design with 731 Taiwanese and 470 U.S. adolescents. Adolescents provided coping responses to peer victimization via both hypothetical situations and within structured open-ended questions. Two culturally distinctive psychological frameworks, seeking connection in Taiwan and showing independence in the United States, were reflected in both the coping responses that adolescents endorsed (i.e., more seeking adults' support in Taiwan and more problem-solving coping in the United States) and the social cognitions used in the coping process (e.g., connection seeking in Taiwan and self-independence demonstration in the United States). Taiwan and U.S. adolescents also differ in the prevalence of coping strategies in the real-life peer victimization descriptions in a way that was comparable with our quantitative findings (i.e., more seeking friends and adults' support in Taiwan and more solving the problem on one's own in the United States).

The cultural diversity of adolescents and the globalization of contemporary life make it crucial to understand cultural contributions to adolescent development. Nowadays, a worldwide population of adolescents faces social difficulties such as peer victimization on a daily basis (Smith & Brain, 2000). Understanding the ways adolescents cope with these peer difficulties and the reasons behind their coping choices will aid researchers in identifying effective interventions and preventions in different cultural contexts.

Coping Strategies in a Cross-Cultural Context

Coping strategies are culturally shaped behaviors (Lam & Zane, 2004). This renders culture a crucial factor associated with an individual's coping pattern because individuals may be expected to adopt coping strategies that are more common and appropriate within their cultural context (Marsella

Furstenberg, 2007-11-15 Teen childbearing has risen to frighteningly high levels over the last four decades jeopardizing the life chances of young parents and their offspring alike particularly among minority communities Or at least that's what politicians on the right and left often tell us and what the American public largely believes But sociologist Frank Furstenberg argues that the conventional wisdom distorts reality In *Destinies of the Disadvantaged* Furstenberg traces the history of public concern over teen pregnancy exploring why this topic has become so politically powerful and so misunderstood Based

on over forty years of Furstenberg's research on teen childbearing *Destinies of the Disadvantaged* relates how the issue emerged from obscurity to become one of the most heated social controversies in America Both slipshod research by social scientists and opportunistic grandstanding by politicians have contributed to public misunderstanding of the issue Although out of wedlock teen pregnancy rose notably between 1960 and 1990 a cause for concern given the burdens of single motherhood at a young age this trend did not reflect a rise in the rate of overall teen pregnancies In fact teen pregnancy actually declined dramatically in the 1960s and 1970s The number of unmarried teenage mothers rose after 1960 not because more young women became pregnant but because those who did increasingly chose not to rush into marriage Furstenberg shows how early social science research on this topic exaggerated the adverse consequences of early parenthood both for young parents and for their children Researchers also inaccurately portrayed single teenage motherhood as a phenomenon concentrated among minorities Both of these misapprehensions skewed subsequent political debates The issue became a public obsession and remained so during the 1990s even as rates of out of wedlock teen childbearing plummeted Addressing teen pregnancy was originally a liberal cause led by advocates of family planning services legalized abortion and social welfare programs for single mothers The issue was later adopted by conservatives who argued that those liberal remedies were encouraging teen parenthood According to Furstenberg the flexible political usefulness of the issue explains its hold on political discourse The politics of teen parenthood is a fascinating case study in the abuse of social science for political ends In *Destinies of the Disadvantaged* Furstenberg brings that tale to life with the perspective of a historian and the insight of an insider and provides the straight facts needed to craft effective policies to address teen pregnancy

White, 2018-11-13 At the founding in 1896 of the first psychological clinic dedicated to children and adolescents the study of the psychological treatment of young people lagged behind that of adults and the basic psychopathology underlying mental disorders in this population was largely ignored Since those early days the field has evolved steadily and in recent years exponentially The Oxford Handbook of Clinical Child and Adolescent Psychology is a state of the science volume providing comprehensive coverage of the psychological problems and disorders of childhood International in scope and penned by the discipline's most eminent scientists and practitioners the handbook begins with a section on conceptual and empirical issues followed by exceptional content on specific psychiatric disorders such as intellectual disability externalizing and internalizing disorders communication disorders schizophrenia and bipolar disorder personality disorders and many more The third section offers chapters on special problems in childhood and adolescence including divorce the incarceration of parents suicide and non suicidal self injury bullying and medical illness A fourth section covers delivery of clinical services in diverse settings such as schools and prisons and the handbook concludes with several chapters on emerging trends and future directions for the field
