Ford and the Global Strategies of Multinationals Maria Isabel Studer Noguez, 2003-08-27 Today the Multinational Enterprise MNE is seen as a leading agent in the process of globalization As they adopt global strategies MNE s are seen to be creating stronger deeper and more lasting links amongst countries thus shifting the balance of power inexorably in their favour to the detriment of the state This book interrogates this idea by undertaking a historical analysis of the global strategies of Ford

Mexican Banking and Investment in Transition John A. Adams, 1997-04-22 Banking and investment in Mexico have changed radically over the past decade and the economic events that prompted these changes will have a significant impact on Mexico s role in regional and world financial markets Adams traces the evolution of Mexico s banking and investment activities reviews current conditions and their implications for future investment opportunities in Mexico and makes clear that what happens to Mexico s economy and political stability will have major implications for what happens elsewhere in the world One of the first books to look at banking and investment in Mexico after the peso crash of 1994 1995 with a highly detailed bibliography and notes Adams s study will be important reading for international business finance and investment professionals and for their colleagues with similar interests throughout the academic community The fate of both Mexico and the United States is that the two countries are forever tied by geography The historical evolution of the dual interaction between the peoples of these two nations is and will be significant for the future of both countries With this in mind the book is divided into chapters reviewing such themes as the interaction and historical financial events that transpired during the advent of the North American Free Trade Agreement NAFTA and the expansion of cross border financial and investment services as well as a framework and background review of the events leading up to and resulting from the devaluations of the 1970s and 1980s and more recently the evolution of the peso crisis of 1994 1995 The imperceptible yet gradual economic integration of the two economies has required time in developing while not always being seamless in its implementation and transition American macroeconomic policy has long had a direct impact on the economy of Mexico as is evidenced by the impact of U S interest rates on the financial underpinnings of the Mexican treasury and the banking system to assist with the overall economic growth of the nation An appreciation for the historically sensitive issues and perspectives be they nationalization of the oil industry immigration or market access for foreign financial services is paramount to a fuller understanding of doing business on both sides of the border

Industrial Restructuring in Mexico Francisco Zapata, 1990 Driving

Continently Maureen Appel Molot,1993 The papers in this collection provide important new material on this industry in crisis which is critical to the economies of the U S Canada and Mexico The authors examine major changes in the industry and how government policies in the three countries have promoted protected and shaped it **Brief Tests of Collection**

Strength Howard D. White,1995-09-26 For purposes of accreditation resource sharing and institutional mission librarians need to assess the strengths of their collections in particular subject areas This book describes and illustrates a brief test for determining a library s collection strength Though such tests are most often employed in academic libraries the methodology outlined by the author should be useful to all types of libraries in assessing the strength of their holdings In a time of increasing material and limited resources libraries need to be particularly judicious in deciding which works to acquire Oftentimes a library seeks to develop strong holdings in one or more subject areas Such an approach is especially useful for libraries that share their resources with other institutions To plan their acquisitions carefully and to be of greatest use to other consortia members a library needs to gauge the strength of its holdings accurately This volume describes and illustrates a relatively brief test to assign libraries a score for existing collection strength in a subject area Drawing upon expert human judgment and holdings data available from OCLC the test can assist librarians in setting and verifying collection levels on the RLG or WLN Conspectus scales Collection strength is often verified in a labor intensive fashion The brief test presented by the author is an economical alternative to the more typical labor intensive approach to collection analysis Commodity Chains and Global Capitalism Gary Gereffi,Miguel Korzeniewicz,1993-11-30 The current

restructuring of the world economy under global capitalism has further integrated international trade and production It thus has brought to the fore the key role of commodity chains in the relationships of capital labor and states Commodity chains are most simply defined as the link between successive processes of manufacturing that result in a final product available for individual consumption Each production site in the chain involves organizing the acquisition of necessary raw materials plus semifinished inputs the recruitment of labor power and its provisioning arranging transportation to the next site and the construction of modes of distribution via markets and transfers and consumption The contributors to this volume explore and elaborate the global commodity chains GCCs approach which reformulates the basic conceptual categories for analyzing varied patterns of global organization and change The GCC framework allows the authors to pose questions about development issues past and present that are not easily handled by previous paradigms and to more adequately forge the macro micro links between processes that are generally assumed to be discretely contained within global national and local units of analysis The paradigm that GCCs embody is a network centered historical approach that probes above and below the level of the nation state to better analyze structure and change in the contemporary world **Industrialization and**
