## **Measurement In Neurological Rehabilitation:**

Measurement in neurological rehabilitation Derick T. Wade,1992 The majority of people in the community with moderate to severe disability have neurological diseases This book focuses on the use of standard measures in the management of people with disability arising from neurological conditions and will therefore be of interest to anyone involved with helping such individuals It starts by outlining the World Health Organization model of impairment disability and handicap and then discusses some general principles underlying the use of measures Specific areas such as the assessment of mobility are also discussed Copies of the commonly used measures are included so that readers can decide for themselves which measures are of most use to them and to enable them to interpret the results of other people s work Throughout the book there is an emphasis on the use of measures in practical day to day work The book will be particularly useful for anyone involved in service audit or evaluation and anyone planning future services Physical Management in Neurological Rehabilitation

Maria Stokes,2004 Building upon the success of the first edition of this popular book the new edition of Physical Management in Neurological Rehabilitation has been completely up dated and revised to reflect changes in practice today The authors consider the theoretical basis and scientific evidence of effective treatment taking a multidisciplinary problem solving approach to patient management which involves patients and carers in goal setting and decision making Book jacket

up a new team of eminent authors for the second edition of this definitive text on neurological physiotherapy. In the first edition the authors described a model of neurological rehabilitation for individuals with motor dysfunction based on scientific research in the areas of neuromuscular control, biomechanics, motor skill learning and the link between cognition and action together with developments in pathology and adaptation. The new edition continues to advance this model while identifying and incorporating the many advances that have occurred in the last decade in the understanding and treatment of adults with neurological conditions whether caused by accident or disease. Among these advances is the knowledge that the brain retains a plastic potential to reorganize even in old and/or lesioned brains and that neural plasticity can be influenced by task-related mental and physical practice in a stimulating environment. There is also an increasing body of knowledge related to the musculoskeletal system's adaptability and the need to prevent length and stiffness-related changes in muscle contractility together with loss of aerobic fitness and endurance. There is an expanding body of clinical research that appears to support the model provided here. The training guidelines outlined in *Neurological Rehabilitation* are based on biomechanical constructs and motor relearning research applied to enhance brain reorganization and muscle contractility and encourage functional recovery of the patient. It connects science and clinical practice enabling students and practitioners to develop their knowledge and use new clinical methods based on modern scientific understanding. Please note that this version is the Pageburst ebook only and does not include the printed textbook. Alternatively you can purchase the printed book with access to Pageburst included; this gives you both the printed and the electronic version together. All chapters have been revised, some with the collaboration of five specialists who are engaged in high-level scientific research and clinical practice. Biomechanical models are presented to provide a framework for action-specific training and exercise to improve performance. Clinical guidelines are science and evidence-based. Emphasis is on new approaches to the delivery of neurological rehabilitation that increase the time spent in mental and physical activity and the intensity of practice and exercise. Up-to-date referencing.

**Neurological Rehabilitation** Michael P. Barnes, David C. Good, 2013-01-10. *Neurological Rehabilitation* is the latest volume in the definitive *Handbook of Clinical Neurology* series. It is the first time that this increasingly important subject has been included in the series and this reflects the growing interest and quality of scientific data on topics around neural recovery and the practical applications of new research. The volume will appeal to clinicians from both neurological and rehabilitation backgrounds and contains topics of interest to all members of the multidisciplinary clinical team as well as the neuroscience community. The volume is divided into five key sections. The first is a summary of current research on neural repair, recovery and plasticity. The authors have kept the topics readable for a non-scientific audience and focused on the aspects of basic neuroscience that should be most relevant to clinical practice. The next section covers the basic principles of neurorehabilitation including excellent chapters on learning and skill acquisition, outcome measurement and functional neuroimaging. The key clinical section comes next and includes updates and reviews on the management of the main

neurological disabling physical problems such as spasticity pain sexual functioning and dysphagia Cognitive emotional and behavioural problems are just as important and are covered in the next section with excellent chapters for example on memory and management of executive dysfunction The final part draws the sections on symptom management together by discussing the individual diseases that are most commonly seen in neurorehabilitation and providing an overview of the management of the disability associated with those disorders The volume is a definitive review of current neurorehabilitation practice and will be valuable to a wide range of clinicians and scientists working in this rapidly developing field A volume in the Handbook of Clinical Neurology series which has an unparalleled reputation as the world's most comprehensive source of information in neurology International list of contributors including the leading workers in the field Describes the advances which have occurred in clinical neurology and the neurosciences their impact on the understanding of neurological disorders and on patient care

*Neurological Disabilities* Susan E. Bennett, James L. Karnes, 1998 Never before has this conceptual model of analysis and treatment been presented in one text This practical text presents a framework for the assessment and treatment of adults with neurological dysfunction Emphasis is placed on identifying disabilities and their underlying impairments Readers will learn to understand and assess disabilities and impairments through detailed review of the anatomy of movement and through discussion of the basic concepts of treatment Coverage includes the four most common impairments weakness balance dysfunction incoordination and sensory perceptual loss The text's unique problem solving approach is from the perspective of the physical therapist as movement scientist readers develop problem solving skills that can be used to assess any patient

Neurological Rehabilitation Andrea L. Behrman, Mark G. Bowden, Dorian K. Rose, 2013-01-10 The clinical trial is essential to testing efficacy and effectiveness of therapeutic interventions Neurorehabilitation presents unique challenges in the execution of clinical trials due to the complexity of both human interface with complex interventions and clinical research staff interaction Attention to key elements recruitment retention treatment fidelity and control intervention selection contributes to successful conduct of a trial Alternatives to the randomized controlled trial and outcome measure selection are important considerations contributing to the merit of the trial While clinical trial outcomes contribute to the scientific evidence their true value and impact comes in the next step translation to clinical practice and the improvement of patient outcomes and quality of life Translation of evidence into practice may best be achieved via partnerships of scientists clinicians and administrators resulting in a dynamic interface between science and practice the laboratory and the clinic

**The Clinical Science of Neurologic Rehabilitation** Bruce H. Dobkin, 2003. The Second Edition of this single-authored volume integrates multiple disciplines of basic and clinical research to help clinicians further develop the best possible care for the rehabilitation of patients with neurologic diseases. From the readable descriptions of the structures and functions of pathways for movement and cognition, the reader comes to understand the potential for training-induced pharmacologic and near-future biologic interventions to enhance recovery. Dr. Dobkin shows how functional neuroimaging serves as a marker for whether physical, cognitive, and neuromodulating therapies work and how they sculpt the plasticity of the brain. Themes such as how the manipulation of sensory experience can serve as a formidable tool for rehabilitation run throughout the text, built from the level of the synapse to behaviors such as grasping, walking, and thinking. From illustrating how we may one day repair the brain and spinal cord to how to retrain spared and new pathways, Dr. Dobkin draws insights from a broad swath of fundamental research to give clinicians tools they can translate into bedside practices. The book treats the medical complications and therapeutic approaches to neurologic diseases as an interconnected matrix. The management of common medical issues, impairments, and disabilities are described across diseases. Special problems posed by patients with stroke, myelopathies, brain injury, multiple sclerosis, degenerative diseases, and motor unit disorders receive individual comment. Short-term and

delayed pulse interventions for patients along with clinical trials are dissected and put into perspective The First Edition of this book was titled Neurologic Rehabilitation The title has been changed to reflect Dr Dobkin s sense that fundamental research now drives the field of neurologic rehabilitation even more than it could in 1996 when the First Edition was published The Second Edition features entirely new chapters on functional neuroimaging of recovery neurostimulators and neuroprostheses integration into the book of many new clinical and neuroscientific observations relevant to the clinician and extensive updating and expansion of all chapters Readers whether clinicians serving the rehabilitation team or students or researchers in neuroscience neurology physical medicine allied health or bioengineering will acquire new insights and tools for creative pursuits that aim to lessen the disabilities of patients      **Neurological Rehabilitation** Pamela Woods

Duncan,2013-01-10 Owing to the complex nature of neurological disease and trauma comprehensive and standardized assessments are needed to evaluate individuals effectively No one standardized assessment is applicable for every situation as each test serves a different purpose Assessments are either generic or disease specific However in neurological rehabilitation most assessments are disease specific as the generic measures may not be precise for outcomes This chapter outlines some of the challenges and considerations that the test administrator needs to consider when selecting the most appropriate and corresponding assessment Four key factors are suggested for determining which assessment to use

**Cognitive Neurorehabilitation** Donald T. Stuss,Gordon Winocur,Ian H. Robertson,1999-10-07 This is the first truly comprehensive survey of cognitive rehabilitation spanning the spectrum from basic science to functional outcome The international team of expert authors provide a critical review of theoretical and methodological issues relating to specific rehabilitation procedures and also to programme organization and management The book is based on the twin premises that basic science is the foundation of rehabilitation and that successful outcome is dependent on the specificity of the rehabilitation In demonstrating this the book goes beyond cognitive rehabilitation treatments to cover biological psychological social and historical factors such as course of recovery mood and motivation family environment education and age With its emphasis on scientific principles multidisciplinary practice and functional outcome this book will serve as an essential resource for all scientists and clinicians concerned with cognitive deficits secondary to altered brain functioning and particularly to psychologists neurologists psychiatrists occupational therapists and physical therapists      **Textbook of**
