Titorenko, Troy A. A. Harkness, Aging of multicellular and unicellular eukaryotic organisms is a highly complex biological phenomenon that affects a plethora of processes within cells This wide array of longevity defining cellular processes which are governed by an evolutionarily conserved signaling network includes oxidative metabolism and protein synthesis in mitochondria lipid and carbohydrate metabolism NAD homeostasis amino acid biosynthesis and degradation ammonium and amino acid uptake ribosome biogenesis and translation proteasomal protein degradation nuclear DNA replication chromatin assembly and maintenance actin organization apoptosis necrosis autophagy protein folding stress response signal transduction cell cycle and cell growth The focus of this Frontiers Special

Topic Issue is on an important conceptual advance in our understanding of how cells integrate and control these numerous processes and how genetic dietary and pharmacological anti aging interventions extend longevity by altering their functional states and spatiotemporal dynamics The Issue will highlight the various strategies used by evolutionarily diverse organisms for coordinating these longevity defining cellular processes in space and time critically evaluate the molecular and cellular mechanisms underlying such coordination and outline the most important unanswered questions and directions for future research in this vibrant and rapidly evolving field

Longevity Secrets Sophie Carter, AI, 2025-03-12 Longevity Secrets explores the multifaceted science of living a longer healthier life emphasizing that longevity is more than just genetics it s about informed choices The book argues that optimizing both lifespan and healthspan the years spent in good health is key Did you know that certain dietary patterns like the Mediterranean diet are linked to increased longevity Or that lifestyle factors such as stress management and social connections play a crucial role in well being The book begins by establishing a scientific foundation then progresses through three sections First it dissects the impact of diet including intermittent fasting on cellular health and disease prevention Next it examines lifestyle factors like exercise and sleep hygiene Finally Longevity Secrets explores genetics discussing personalized medicine and its ethical implications It uses evidence based strategies and real world applications to offer actionable insights without overwhelming technical jargon making it accessible to anyone interested in healthy aging and well being

Anti-aging Drugs Alexander M Vaiserman, 2017-01-18 Aging is a natural phenomenon that is peculiar to all living things However accumulating findings indicate that senescence could be postponed or prevented by certain approaches Substantial evidence has emerged supporting the possibility of radical human

health and lifespan extension in particular through pharmacological modulation of aging. A number of natural dietary ingredients and synthetic drugs have been assumed to have geroprotective potential. In the development of anti aging therapeutics, several cell, insect and animal models may provide useful starting points prior to human studies. This book provides an overview of current research aimed to search for life extending medications and describes pharmacological aspects of anti aging medicine. Readers are introduced to the fascinating historical background of geroprotection in the first chapter. In depth information on models for investigating geroprotective drugs precedes a section covering anti aging properties of pharmaceutical compounds such as calorie restriction mimetics, autophagy inducers, senolytics and mitochondrial antioxidants. Finally, strategies to translate discoveries from aging research into drugs and healthcare policy perspectives on anti ageing medicine are provided to give a complete picture of the field. A timely and carefully edited collection of chapters by leading researchers in the field, this book will be a fascinating and useful resource for pharmacologists, gerontologists and any scientifically interested person wishing to know more about the current status of research into anti aging remedies, challenges and opportunities.

The Ethics of Genetic Engineering

Roberta M. Berry, 2013-05-13. Human genetic engineering may soon be possible. The gathering debate about this prospect already threatens to become mired in irresolvable disagreement. After surveying the scientific and technological developments that have brought us to this pass, *The Ethics of Genetic Engineering* focuses on the ethical and policy debate, noting the deep divide that separates proponents and opponents. The book locates the source of this divide in differing framing assumptions: reductionist pluralist on one side, holist communitarian on the other. The book argues that we must bridge this divide, drawing on the resources from both encampments if we are to understand and cope with the distinctive problems posed by genetic engineering. These problems, termed fractious problems, are novel, complex, ethically fraught, unavoidably of public concern and unavoidably divisive. Berry examines three prominent ethical and political theories: utilitarianism, Kantianism and virtue ethics, to consider their competency in bridging the divide and addressing these fractious problems. The book concludes that virtue ethics can best guide parental decision making and that a new policymaking approach, sketched here, a navigational approach, can best guide policymaking. These approaches enable us to gain a rich understanding of the problems posed and to craft resolutions adequate to their challenges.

Drosophila as a Model Organism for Ageing Studies

Frédéric A. Lints, M. Hani Soliman, 2013-11-21. Many books on ageing attempt to cover the whole field of gerontology. However, since gerontology is now such a diversified and rapidly expanding subject, the results of such attempts tend to be either incomprehensible compendia or encyclopedias of disheartening size. The present book aims to be both more modest and more ambitious. It focuses on a single object, *Drosophila*, but attempts to offer a synthesis of all the gerontological work that has been done on it. It also aims to show the extent to which this work has led to an understanding of the biological phenomena of ageing, longevity, senescence and death in higher organisms, including man. Finally, it attempts, on the basis of current knowledge, to

mark out the paths that the next generation of researchers will most probably follow *Drosophila* has been used as a model organism to advance our basic knowledge of the fundamentals of genetics and gerontology It may be noted that the pioneering work on the genetics of ageing which used *Drosophila* began very early in this century within the first decade of the rediscovery of Mendel's laws **California. (State)., Body Composition and Aging C. V. Mobbs, Patrick R. Hof, 2010 Increased adiposity and decreased muscle mass contribute substantially to age dependent disease and disability In particular age related increase in adiposity is quickly becoming a major threat to public health throughout the world Although the hypothesis that age related changes in body composition are due to lifestyle choices alone is well accepted it is a vast oversimplification This volume reflects the current knowledge in this rapidly developing field of research The first part of the book discusses the extent to which increased adiposity contributes to age related diseases and longevity The obesity paradox describing the protective role of overweight in decreasing mortality while increasing pathology is covered in depth Further chapters address specific aspects of the regulation of energy balance during aging including the effects of changes in food intake Finally the causes and consequences of loss of muscle mass and age related osteoporosis are examined A valuable help for physicians treating elderly patients this book will also be of great interest to researchers studying energy balance muscle physiology bone disease and other aspects of aging **Hearings Before Subcommittee of House Committee on Appropriations ... in**
