Catalog of Unconfirmed Comets - Volume 1 Gary W. Kronk,Maik Meyer,2023-05-09 This catalog is the first in depth investigation of comets that were reported since the 17th century but not confirmed and subsequently lost Volume I of this two volume work covers objects observed between 1600 and 1899 a period that was dominated by visual observations and was experiencing a rapid evolution in science The book uniquely combines the history and culture of comet hunting and discovery with modern tools of orbital mechanics to present a wholesome catalog of unconfirmed and suspected comets Each case includes a presentation of the observations a discussion about the observer when possible consideration of the historic context and a conclusion as to the nature of the object In most cases the book presents material from original sources including some never before published that were acquired from observatories libraries and historical societies around the world Although some of these unconfirmed comets turned out to be misidentifications of planets or star clusters fabrications or poor observations of comets that were already being observed the Authors did identify many objects that were likely real comets In some cases the Authors were even able to derive orbits for the first time These observations may be valuable in the future as they could prove to be observations of periodic comets still to be discovered

Visions of the Cosmos Carolyn Collins Petersen,John C. Brandt,2003-11-20 This spectacularly illustrated book is a comprehensive exploration of astronomy through the eyes of the world s observatories and spacecraft missions Featuring the latest and most stunning images it provides a magnificent picture of the beauty of the cosmos The accompanying text is an accessible guide to the science behind the wonders and includes clear explanations of all the major themes in astronomy An essential guide to understanding and appreciating the Universe Visions of the Cosmos builds on the success of the authors previous book Hubble Vision which became an

Physics Of Comets (2nd Edition) K S Krishna Swamy, 1997-05-03 The study of Comet Halley in 1986 was a tremendous success for cometary science In March of that year six spacecrafts passed through Comet Halley as close as 600 km from the nucleus and made the in situ measurements of various kinds These space missions to Comet Halley and that of the ICE spacecraft to Comet Giacobini Zinner combined with studies both ground based and above the atmosphere have increased our knowledge of cometary science in a dramatic way This new edition of Physics of Comets incorporates these new and exciting findings The emphasis of the book is on the physical processes operating in a cometary environment It discusses up to date observations methods and results based on the study of various comets The subject is developed in a systematic manner covering various aspects of cometary phenomena This book may serve as a text book for students and as reference material for researchers

Catalog of Unconfirmed Comets - Volume 2 Gary W. Kronk, Maik Meyer, 2024-05-30 This two volume catalog is the first in depth investigation of comets that were reported since the 17th century but not confirmed and subsequently lost Volume 2 covers objects observed between 1900 and the present a period that was dominated by photographic observations and the detection of much fainter objects This book provides a distinctive blend of the historical and cultural aspects of comet hunting and discovery along with the utilization of contemporary tools in orbital mechanics and data analysis This comprehensive compilation offers a thorough catalog of unconfirmed comets Each case encompasses a detailed presentation of observations a discussion on the observer when feasible an examination of the historical context and a conclusive analysis of the object s nature The book predominantly showcases original material and photographs sourced from observatories libraries and historical societies worldwide exposing a significant number of illustrations that have never been previously published While some of these unconfirmed comets were determined to be misidentifications of minor planets artifacts caused by emulsion or optical effects or inaccurate observations of comets that were already under observation the Authors did manage to identify numerous objects that were likely genuine comets These

observations hold potential value for the future as they could be observations of periodic comets yet to be formally identified In a handful of instances the Authors were also able to find new observations which led to the calculation of orbits for the first time enabling a formal announcement or identifying suspected comets that were already known to be periodic comets

Dawn of Small Worlds Michael Moltenbrey,2015-10-24 This book gives a detailed introduction to the thousands and thousands of smaller bodies in the solar system Written for interested laymen amateur astronomers and students it describes the nature and origin of asteroids dwarf planets and comets and gives detailed information about their role in the solar system The author nicely reviews the history of small world exploration and describes past current and future space craft missions studying small worlds and presents their results Readers will learn that small solar system worlds have a dramatically different nature and appearance than the planets Even though research activity on small worlds has increased in the recent past many of their properties are still in the dark and need further research *Comets in the 21st Century*
