of various important developmental factors It is only by understanding the nature of the interactions of these influences that one can sympathetically appreciate and if necessary modify the child s perception of the situation with which he is faced The argument presented follows the discrete strands of development which form the plait of individual differential perception and draws upon the case of work of clinicians using psychoanalytic concepts experimental investigations of infants and children naturalistic observations and longitudinal studies since it is believed that these contemporary yet distinct approaches draw attention to different aspects of the multifaceted human child As such the book was both a useful survey of this important complex field of study at the time and is still a stimulating contribution to the debate **Good Housekeeping** ,1924
