

Toxins in the Environment

- Humans release many toxic chemicals, including synthetics previously unknown to nature
- In some cases, harmful substances persist for long periods in an ecosystem
- One reason toxins are harmful is that they become more concentrated in successive trophic levels
- **Biological magnification** concentrates toxins at higher trophic levels, where biomass is lower
- PCBs and many pesticides such as DDT are subject to biological magnification in ecosystems
- In the 1960s Rachel Carson brought attention to the biomagnification of DDT in birds in her book *Silent Spring*
