Extracellular Vesicle-Mediated Processes in Cardiovascular Diseases Rory R. Koenen, Elena Aikawa, 2018-10-19 It is long known that many cells can shed extracellular vesicles small membrane enclosed cell fragments Although the existence of extracellular vesicles has been recognized for many years researchers are only beginning to understand their physiologic significance Several recent studies have demonstrated that extracellular vesicles released from cells serve as a mode of cellular communication They can carry diverse molecular payload e g nucleic acids bioactive lipids and proteins to distal organs and recipient cells Extracellular vesicles can be classified into three major groups exosomes microvesicles and apoptotic bodies All these types of extracellular vesicles can be found in a variety of biologic specimen and their numbers distribution and composition may serve as biomarkers for various disorders including cardiovascular disease Although extracellular vesicle mediated processes are currently best characterized in the fields of cancer biology and neurobiology evidence is accumulating that extracellular vesicles play a key role in the pathophysiology of diabetes thrombosis inflammation and cardiovascular calcification In this Research Topic we invited review and methodological articles that advance our understanding of extracellular vesicle related processes in vascular biology

Technologies and Protocols for the Future of Internet Design: Reinventing the Web Prakash Vidyarthi, Deo, 2012-02-29

The Internet has changed significantly from its beginnings as a simple network used to pass data from one computer to another Containing essential tools for everyday information processing the Internet is used by small and large organizations alike and continues to evolve with the changing information technology landscape Technologies and Protocols for the Future of Internet Design Reinventing the Web aims to provide relevant methods and theories in the area of the Internet design It is written for the research community and professionals who wish to improve their understanding of future Internet technologies and gain knowledge of new tools and techniques in future Internet design **Meta-Modeling** Jean-Michel Bergé, Oz Levia, Jacques Rouillard, 2012-12-06 Models in system design follow the general tendency in electronics in terms of size complexity and difficulty of maintenance While a model should be a manageable representation of a system this increasing complexity sometimes forces current CAD tool designers and model writers to apply modeling techniques to the model itself Model writers are interested in instrumenting their model so as to extract critical information before the model is complete CAD tools designers use internal representations of the design at various stages The complexity has also led CAD tool developers to develop formal tools theories and methods to improve relevance completeness and consistency of those internal representations Information modeling involves the representation of objects their properties and relationships Performance Modeling When it comes to design choices and trade offs performance is generally the final key However performance estimations have to be extracted at a very early stage in the system design Performance modeling concerns the set of tools and techniques that allow or help the designer to capture metrics relating to future architectures Performance modeling encompasses the whole system including software modeling It has a strong impact on all levels of design choices from hardware software partitioning to the final layout Information Modeling Specification and formalism have in the past

traditionally played little part in the design and development of EDA systems their support environments languages and processes Instead EDA system developers and EDA system users have seemed to be content to operate within environments that are often extremely complex and may be poorly tested and understood This situation has now begun to change with the increasing use of techniques drawn from the domains of formal specification and database design This section of this volume addresses aspects of the techniques being used In particular it considers a specific formalism called information modeling which has gained increasing acceptance recently and is now a key part of many of the proposals in the EDA Standards Roadmap which promises to be of significance to the EDA industry In addition the section looks at an example of a design system from the point of view of its underlying understanding of the design process rather than through a consideration of particular CAD algorithms Meta Modeling Performance and Information Modeling contains papers describing the very latest techniques used in meta modeling It will be a valuable text for researchers practitioners and students involved in Electronic Design Automation
