Addiction is conceived as a current survey and synthesis of the most important findings in our understanding of the
neurobiological mechanisms of addiction over the past 50 years The book includes a scholarly introduction thorough
descriptions of animal models of addiction and separate chapters on the neurobiological mechanisms of addiction for
psychostimulants opioids alcohol nicotine and cannabinoids Key information is provided about the history sources and
pharmacokinetics and psychopathology of addiction of each drug class as well as the behavioral and neurobiological
mechanism of action for each drug class at the molecular cellular and neurocircuitry level of analysis A chapter on
neuroimaging and drug addiction provides a synthesis of exciting new data from neuroimaging in human addicts a unique
perspective unavailable from animal studies The final chapters explore theories of addiction at the neurobiological and
neuroadaptational level both from a historical and integrative perspective The book incorporates diverse finding with an
emphasis on integration and synthesis rather than discrepancies or differences in the literature Presents a unique
perspective on addiction that emphasizes molecular cellular and neurocircuitry changes in the transition to addiction
