Nariokotome Homo Erectus Skeleton:

The Nariokotome Homo Erectus Skeleton Alan Walker, Richard E. Leakey, 1993 The discovery of the Nariokotome Homo erectus skeleton a milestone in the history of paleoanthropology is fully documented in this book Beautifully illustrated it takes us into the field and the laboratory and into the far reaches of prehistory to show us what the fossilized remains of a young boy can tell us about our beginnings *Hominin Postcranial Remains from Sterkfontein, South Africa, 1936-1995* Bernhard Zipfel, Brian Richmond, Carol V. Ward, 2020 This volume is the first source to present an in depth analysis of postcranial fossils allowing readers to cross compare standardized data for themselves *The Origin and Evolution of Humans and Humanness* D. Tab Rasmussen, 1993 This volume represents the proceedings of the Irving Stone Memorial Symposium on The Origin of Humans and Humanness Scientists in the fields of anthropology archaeology biology and ecology were invited to discuss their research concerning the how s where s and why s of the evolutionary history of humans Using our knowledge of the behavior and reproduction of living primates chapter 1 describes what made the earliest human like animals of 4 million years ago different from their ape relatives While showing how the science of paleontology works the origin of our genus Homo is discussed in chapter 2 With emphasis on those humans who first made regular use of stone tools some 2 million years ago chapter 3 interprets ancient human behavior and ecology from an archeological perspective Tools from genetics molecular biology archaeology and paleontology are used to examine the origin of modern Homo sapiens in chapter 4 Chapter 5 looks at the artistry of Ice Age craftsmen Finally using computer methods chapter 6 delves into the complex issue of how does human behavior change and what is the relationship between biological and cultural evolution

The Wisdom of the Bones Alan Walker, Pat Shipman, 1997-09-02 Fascinating As engaging an explanation of how scientists study fossil bones as any I have ever read John R Alden Philadelphia Inquirer In 1984 a team of paleoanthropologists on a dig in northern Kenya found something extraordinary a nearly complete skeleton of Homo erectus a creature that lived 1.5 million years ago and is widely thought to be the missing link between apes and humans The remains belonged to a tall rangy adolescent male The researchers called him Nariokotome boy In this immensely lively book Alan Walker one of the lead researchers and his wife and fellow scientist Pat Shipman tell the story of that epochal find and reveal what it tells us about our earliest ancestors We learn that Nariokotome boy was a highly social predator who walked upright but lacked the capacity for speech In leading us to these conclusions *The Wisdom of the Bones* also offers an engaging chronicle of the hundred year long search for a missing link a saga of folly heroic dedication and inspired science Brilliantly captures an intellectual odyssey One of the finest examples of a practicing scientist writing for a popular audience Portland Oregonian A vivid insider s perspective on the global efforts to document our own ancestry Richard E Leakey *Biological Anthropology of the Human Skeleton* M. Anne Katzenberg, Shelley R. Saunders, 2011-09-23 This book is virtually required reading for biological anthropologists and will be a useful up to date primer on osteological analyses for a wider audience The Quarterly

Review of Biology March 2009 a comprehensive guide to the ever changing discipline of physical anthropology provides an in depth introduction to human skeletal biology The structure of the book makes it easy for the reader to follow the progression of the field of human skeletal biology PaleoAnthropology 2009 Issue The First Edition of Biological Anthropology of the Human Skeleton is the market leading reference and textbook on the scientific analysis of human skeletal remains recovered from archaeological sites Now featuring scores of new or thoroughly revised content this Second Edition provides the most comprehensive and up to date coverage of the topic available Like the previous edition this Second Edition is organized into five parts with contributing chapters written by experts in the field of human skeletal biology Part One covers theory and application Part Two discusses morphological analyses of bone teeth and age changes Part Three reviews prehistoric health and disease Part Four examines chemical and genetic analysis of hard tissues and Part Five closes with coverage of quantitative methods and population studies Each chapter includes a review of recent studies descriptions of analytical techniques and underlying assumptions theory methodological advances and speculation about future research New or thoroughly revised content includes Techniques in the analysis of human skeletal and dental remains Extensive coverage of new technologies including modern morphometric techniques Advances in the field of forensic anthropology Enhanced discussion of ethical terms regarding the study of aboriginal peoples remains where those people are no longer the dominant culture This book serves as an indispensable research guide to biological anthropologists osteologists paleoanthropologists and archaeologists Now with a stronger focus on teaching complex material to students this revised edition provides enhanced case studies and discussions for future directions making it an invaluable textbook for advanced undergraduates and graduate students in biological anthropology and forensic anthropology programs **Handbook of Landscape**

Archaeology Bruno David, Julian Thomas, 2016-06-03 Over the past three decades landscape has become an umbrella term to describe many different strands of archaeology From the processualist study of settlement patterns to the phenomenologist s experience of the natural world from human impact on past environments to the environment s impact on human thought action and interaction the term has been used In this volume for the first time over 80 archaeologists from three continents attempt a comprehensive definition of the ideas and practices of landscape archaeology covering the theoretical and the practical the research and conservation and encasing the term in a global framework As a basic reference volume for landscape archaeology this volume will be the benchmark for decades to come All royalties on this Handbook are donated to the World Archaeological Congress Behaviour in our Bones Cara S. Cardoso, Kimberly A. Plomp, 2023-02-07 Exploring behaviour through bones has always been a fascinating topic to those that study human remains Human bodies record and store vast amounts of information about the way we move where we live and our experiences of health and socioeconomic circumstances We see it every day and experience it but when it comes to past populations understanding behaviour is largely mediated by our ability to read it in bones Behaviour in Our Bones How

Human Behaviour Influences Skeletal Morphology examines how human physical and cultural actions and interactions can be read through careful analyses of skeletal human remains This book synthesises the latest research on reconstructing behaviour in the past Each chapter is dedicated to a specific region of the human body guiding the reader from head to toe and highlighting how evidence found on the skull shoulder thorax spine pelvis and the upper and lower limbs has been used to infer patterns of activity and other behaviour Chapter authors expertly summarise and critically discuss a range of methodological theoretical and interpretive approaches used to read skeletal remains and interpret a wide variety of behaviours including tool use locomotion reproduction health pathology and beyond Serves as a comprehensive resource for readers who are new to human skeletal behaviour investigations Offers an overview on how behaviour may impact the entire skeleton from head to toe Discusses activities that can leave evidence on the human skeleton and how behaviour can become incorporated in bone Introduces methods that biological anthropologists use to quantify and interpret skeletal evidence for behaviour and its range of morphological variation Critically examines the current state of skeletal behaviour research and provides recommendations for future work in this field

Human Evolution Source Book Russell L. Ciochon, John G. Fleagle, 2016-12-05 For Junior Senior and Graduate courses in Human Evolution taught in anthropology and biology departments This book is the most comprehensive collection of cutting edge articles on human evolution Designed for use by students in anthropology paleontology and evolutionary biology this edited volume brings together the major ideas and publications on human evolution of the past three decades The book spans the entire scope of human evolution with particular emphasis on the fossil record including archaeological studies

Was Man More Aquatic in the Past? Fifty Years After Alister Hardy - Waterside Hypotheses of Human Evolution Mario Vaneechoutte, Algis Kuliukas, Marc Verhaegen, 2011 The book starts from the observation that humans are very different from the other primates Why are we naked Why do we speak Why do we walk upright Fifty years ago in 1960 marine biologist Sir Alister Hardy tried to answer this when he announced his so called aquatic hypothesis human ancestors did not live in dry savannahs as traditional anthropology assumes but have adapted to live at the edge between land and water gathering both terrestrial and aquatic foods This eBook is an up to date collection of the views of the most important protagonists of this long neglected theory of human evolution

Out of Africa I John G. Fleagle, John J. Shea, Frederick E. Grine, Andrea L. Baden, Richard E. Leakey, 2010-08-20 For the first two thirds of our evolutionary history we hominins were restricted to Africa Dating from about two million years ago hominin fossils first appear in Eurasia This volume addresses many of the issues surrounding this initial hominin intercontinental dispersal Why did hominins first leave Africa in the early Pleistocene and not earlier What do we know about the adaptations of the hominins that dispersed their diet locomotor abilities cultural abilities Was there a single dispersal event or several Was the hominin dispersal part of a broader faunal expansion of African mammals northward What route or routes did dispersing populations take

Human Growth and Development Noel Cameron, Lawrence Schell, 2021-11-18 Human Growth and Development Third Edition provides a comprehensive volume covering the biology of human growth and the genetic, endocrine, environmental, nutritional, and socio-economic factors that contribute towards its full expression. Human Growth and Development continues to be a valuable resource for researchers, professors, and graduate students across the interdisciplinary area of human development. For the new edition, updates are made to all fourteen of the core chapters of the book, which form the essential reading for a comprehensive understanding of human growth and development. Additionally, new special topics are covered, including the interpretation of recently found sub-adult fossils that expand our understanding of the evolution of human growth and a discussion of the early pattern of growth and development as the developmental origins of risk for non-communicable diseases of adulthood. Human Growth and Development Third Edition includes contributions from the well-known experts in the field and is the most reputable comprehensive resource available. New chapters include the impact of physical activity across childhood and adolescence, information on the evolution of the human growth pattern, and the contribution of epigenetics to our understanding of human growth. Offers the necessary tools to connect human development data with predictive medicine. Provides extensive depth on content in the form of easily digestible, lecture-length chapters.

Spinal Evolution Ella Been, Asier Gómez-Olivencia, Patricia Ann Kramer, 2019-08-07 The vertebral spine is a key element of the human anatomy. Its main role is to protect the spinal cord and the main blood vessels. The axial skeleton, with its muscles and joints, provides stability for the attachment of the head, tail, and limbs, and at the same time enables the mobility required for breathing and for locomotion. Despite its great importance, the vertebral spine is often overlooked by researchers because a vertebrae are fragile in nature, which makes their fossilization a rare event; b) they are metameric, seriated, and repeated elements that make their anatomical determination, and thus their subsequent study, difficult; and c) the plethora of bones and joints involved in every movement or function of the axial skeleton makes the reconstruction of posture, breathing mechanics, and locomotion extremely difficult. It is well established that the spine has changed dramatically during human evolution. Spinal curvatures, spinal load transmission, and thoracic shape of bipedal humans are derived among hominoids. Yet there are many debates as to how and when these changes occurred and to their phylogenetic, functional, and pathological implications. In recent years, renewed interest arose in the axial skeleton. New and exciting finds, mostly from Europe and Africa, as well as new methods for reconstructing the spine, have been introduced to the research community. New methodologies such as Finite Element Analysis, trabecular bone analysis, Geometric Morphometric analysis, and gait analysis have been applied to the spines of primates and humans. These provide a new and refreshing look into the evolution of the spine. Advanced biomechanical research regarding posture, range of motion, stability, and attenuation of the human spine has interesting evolutionary implications. Until now, no book that summarizes the updated

research and knowledge regarding spinal evolution in hominoids has been available The present book explores both these new methodologies and new data including recent fossil morphological biomechanical and theoretical advances regarding vertebral column evolution In order to cover all of that data we divide the book into four parts 1 the spine of hominoids 2 the vertebral spine of extinct hominins 3 ontogeny biomechanics and pathology of the human spine and 4 new methodologies of spinal research These parts complement each other and provide a wide and comprehensive examination of spinal evolution

The Origin of Humankind Massimiliano Aloisi, 2000 This volume deals with the fascinating topic of the origin of humankind Some of its important areas from palaeontology to genetics have yielded striking contributions However it also has aspects that transcend science and probe deeply into domains that do not pertain to scientific culture proper such as religion and philosophy The volume brings together contributions from a group of palaeontologists and geneticists who present an update of knowledge on the topic the Out of Africa theory the demise of the Neanderthal and the Italian scene

The Human Fossil Record, Craniodental Morphology of Genus Homo (Africa and Asia) Jeffrey H. Schwartz, Ian Tattersall, 2005-03-11 The Human Fossil Record series is the most authoritative and comprehensive documentation of the fossil evidence relevant to the study of our evolutionary past This second volume covers the craniodental remains from Africa and Asia attributed to the genus Homo In this monumental and groundbreaking new series the authors use clearly defined terminology and descriptive protocols that are applied uniformly throughout Organized alphabetically by site name with detailed morphological descriptions and original expertly taken photographs each entry features Location information History of discovery Previous systematic assessments of the fossils Geological archaeological and faunal contexts Dating References to the primary literature

Eye April Nowell, 2001-01-01 The last decade has witnessed a sophistication and proliferation in the number of studies focused on the evolution of human cognition reflecting a renewed interest in the evolution of the human mind in anthropology and in many other disciplines The complexity and enormity of this topic requires the coordinated efforts of many researchers This volume brings together the disciplines of palaeontology psychology anatomy and primatology Together they address a number of issues including the evolution of sex differences in spatial cognition the role of archaeology in the cognitive sciences the relationships between brain size cranial reorganization and hominid cognition and the role of language and information processing in human evolution *The Postcranial Anatomy of Australopithecus afarensis* Yohannes Haile-Selassie, Denise F. Su, 2015-12-22 This volume describes a 3.6 million years old partial skeleton of *Australopithecus afarensis* from the Woranso Mille central Afar Ethiopia This specimen is the first adult partial skeleton to be recovered since Lucy's AL 288-1 discovery in 1974 It is older than Lucy by 400,000 years and sheds light on the paleobiology of early *Australopithecus afarensis* particularly the morphology of the shoulder girdle and thoracic shape which are thus far poorly understood and actively debated The fauna associated with the partial skeleton tells us enormously about *Au. afarensis* paleoecology and give us another piece of the puzzle regarding habitat availability and use for *Au. afarensis* outside the Hadar region where it has been well known for the last four decades **A Companion to South Asia in the Past** Gwen Robbins Schug, Subhash R. Walimbe, 2016-04-13 A Companion to South Asia in the Past provides the definitive overview of research and knowledge about South Asia's past from the Pleistocene to the historic era in India Pakistan Sri Lanka Bangladesh and Nepal provided by a truly global team of experts The most comprehensive and detailed scholarly treatment of South Asian archaeology and biological anthropology providing ground breaking new ideas and future challenges Provides an in depth and broad view of the current state of knowledge about South Asia's past from the Pleistocene to the historic era in India Pakistan Sri Lanka Bangladesh and Nepal A comprehensive treatment of research in a crucial region for human evolution and biocultural adaptation A global team of scholars together present a varied set of perspectives on South Asian pre and proto history Bioarchaeology and Climate Change Gwen Robbins Schug, 2017-01-10 Using subadult skeletons from the Deccan Chalcolithic period of Indian prehistory along with archaeological and paleoclimate data this volume makes an important contribution to understanding the effects of ecological change on demography and childhood growth during the second millennium B.C. in peninsular India Michael Pietrusewsky University of Hawai'i at Manoa In the context of current debates about global warming archaeology contributes important insights for understanding environmental changes in prehistory and the consequences and responses of past populations to them In Indian archaeology climate change and monsoon variability are often invoked to explain major demographic transitions cultural changes and migrations of prehistoric populations During the late Holocene 1400-700 B.C. agricultural communities flourished in a semiarid region of the Indian subcontinent until they precipitously collapsed Gwen Robbins Schug integrates the most recent paleoclimate

reconstructions with an innovative analysis of skeletal remains from one of the last abandoned villages to provide a new interpretation of the archaeological record of this period Robbins Schug's biocultural synthesis provides us with a new way of looking at the adaptive social and cultural transformations that took place in this region during the first and second millennia B C Her work clearly and compellingly usurps the climate change paradigm demonstrating the complexity of human environmental transformations This original and significant contribution to bioarchaeological research and methodology enriches our understanding of both global climate change and South Asian prehistory
