Narrating Psychology Pb 1987:

Narration and Therapeutic Action Jerrold R Brandell, 2018-10-24 Narration and Therapeutic Action raises challenging questions about the limitations of science and of scientific inquiry for the practice of social work. In doing so, this innovative book calls upon clinical social workers, psychologists, and psychoanalysts to examine some of the most fundamental assumptions about the clinical process and what is therapeutic about it. Written by social work clinicians and theorists, the book explores the construction of meaning within the dual framework of psychoanalysis and clinical social work. Readers of Narration and Therapeutic Action will find the way in which clinical illustrations are used to articulate theoretical ideas especially useful. You will find chapters ranging from the highly abstract and theoretical to those that consider very specific dimensions of clinical process. As contributors examine various aspects of narrative theory and its relationship to psychoanalysis and clinical social work, they highlight such themes as important theoretical contributions of psychoanalytic authors including Roy Schafer, Donald Spence, and the French psychoanalyst Jacques Lacan to the study of narratives; how to use various frameworks such as self psychology and multigenerational family systems theory as a structure for analysis of clients' narratives; narratives and their fit in psychoanalytic developmental theories; the evolution of specific narratives in the context of ongoing psychoanalytically oriented treatment; the narration of traumatic experiences in dynamic psychotherapy. Clinical social workers, psychoanalysts, and psychologists will find Narration and Therapeutic Action filled with answers to important questions about the very nature of what is therapeutic in the psychoanalytic process and why, whether existing theory can be used with modification as a guide to the unpacking of the text, and if there are specific psychoanalytic theories of development better suited to the meaning making that occurs in the crucible of the psychoanalytic dialogue. Narration and Therapeutic Action is ideal as a guide and reference for practitioners and students of clinical social work, psychoanalysis, and clinical psychology, as well as for instructors of clinical theory and practice. Readers will find abundant evidence of consensus and conflict, disparity and complementarity, and resonance and dissonance in the contributors' diverse viewpoints. While this provides readers with support for their preexisting theoretical and clinical assumptions, it also offers a broadened perspective on other theories.

Positive Psychology Across the Lifespan Piers Worth, 2022-02-22 Positive Psychology Across the Life Span provides an insight into how we are affected by the different stages of adult development and gives us the opportunity to change through choice rather than leaving change to chance. The science of positive psychology offers a wealth of research and evidence-based interventions and shares insights into which habits and behaviours contribute to how to live a flourishing life. This book aims to extend that knowledge by introducing and incorporating key aspects of existential and humanistic psychology and explores positive psychology with a lifespan perspective. It goes beyond theory to look at practical application with insightful reflective questions. Whilst acknowledging the differences and disagreements between some of the key figures in the subject areas of the book, it seeks to highlight the

areas where there is agreement and congruence which have been previously overlooked or ignored The book will be essential reading for students and practitioners of positive psychology as well as other mental health professionals **Narrative**

Identity, Autonomy, and Mortality John J. Davenport, 2012 In the last two decades interest in narrative conceptions of identity has grown exponentially though there is little agreement about what a life narrative might be In connecting Kierkegaard with virtue ethics several scholars have recently argued that narrative models of selves and MacIntyre's concept of the unity of a life help make sense of Kierkegaard's existential stages and in particular explain the transition from aesthetic to ethical modes of life But others have recently raised difficult questions both for these readings of Kierkegaard and for narrative accounts of identity that draw on the work of MacIntyre in general While some of these objections concern a strong kind of unity or wholeheartedness among an agent's long term goals or cares the fundamental objection raised by critics is that personal identity cannot be a narrative since stories are artifacts made by persons In this book Davenport defends the narrative approach to practical identity and autonomy in general and to Kierkegaard's stages in particular

Cognitive Development and Child Psychotherapy Stephen R. Shirk,2013-11-09 Like hiking off the well traveled trail attempting to bridge foreign do mains of research and practice entails certain risks This volume repre sents an effort to explore the relatively uncharted territory of cognitive and social cognitive processes embedded in child psychotherapy The territory is largely uncharted not because of a lack of interest in children and cognition but because child psychotherapy has been

chronically neglected by clinical researchers For example recent meta analyses of the effectiveness of child psychotherapy draw on less than 30 non behavioral studies of child psychotherapy conducted over a 30 year period The average of one study per year pales in comparison to the volume of research on adult psychotherapy Moreover research examining cognitive affective and language processes in child psychotherapy is virtually nonexistent Consequently the contributions to this volume should not be seen as reviews of an extant clinical research literature Instead they represent attempts to expand the more familiar and well researched province of developmental psychology into the relatively uncharted domain of child psychotherapy process In addition to bridging the literature on child psychotherapy with research perspectives on children's cognitive and social cognitive development this volume attempts to cross a second gap Recent surveys of the utilization of psychotherapy research by practicing psychotherapists indicate the distance between these two domains is substantial Only a small minority of practitioners find psychotherapy research to be a useful source of information for their practice

body of research supporting the role of motivation in adaptive and rewarding interpersonal interactions with others The field of human motivation is rapidly growing but most studies have focused on the effects of motivation on individuals personal happiness and task engagement Only recently have theorists and empiricists begun to recognize that dispositional and state motivations impact the ways individuals approach interpersonal interactions In addition researchers are now recognizing that the quality of interpersonal interactions influences consequent happiness and task engagement thus helping to explain previous findings to this end Similarly social psychology and relationships researchers have focused on the impact of cognitions emotions and behaviors on people s relationships In their work relationships researchers demonstrate that both contextual characteristics and individual differences influence the quality of interactions Many of these studies seek to understand which characteristics strengthen the bonds between people encourage empathy and trust and create a sense of well being after a close interaction This work seeks to integrate the field of human motivation and interpersonal relationships Both fields have seen extensive growth in the past decade and each can contribute to the other However no single compiled work is available that targets both fields This is the case in part because only now is there enough work to make a strong and compelling case for their integration In the previous years research has been conducted to show that motivation is relevant and important for interactions among strangers and in close relationships In addition developmental mechanisms for these relations are identified and mechanisms by which motivation strengthens people s relationships Finally recent work has demonstrated the many implications for interpersonal relationships showing that motivation impacts a range of interpersonal processes from prejudice regulation and objectification of others to empathy and care This book seeks to summarize and organize all these findings and present them in a way that is relevant to both motivation researchers and social and relationship researchers

opportunities A recurring theme in many chapters is that of the heterogeneity of the group of people who are variously categorized as older aged elderly or over 65 The contributors review the literature analytically in a way that reveals not only current theoretical and methodological approaches to communication and aging research but also sets the future agenda This handbook will be of great interest to scholars and researchers in gerontology developmental psychology and communication and in this updated edition will continue to play a key role in the study of communication and aging *The Routledge Handbook of Emotions and Mass Media* Katrin Döveling,Elly A.
