Narrating The New Predictive Genetics Ethics Ethnography And Science:

Narrating the New Predictive Genetics Monica Konrad, 2005-02-17 This work explores the way changes in technology have affected the relationship between ethics and medicine generating new approaches to ethical issues and the implications of medical practice Drawing on extensive ethnographic research with families affected by Huntington's Disease Monica Konrad explores the huge disparity between the experience of living with the results of genetic testing and the knowledge and expertise to develop policy clinical services and support

Extractions M. Nahman, 2013-01-17 Michal Nahman traces different kinds of extraction the practices of human egg harvesting in different national contexts the political economic consequences of such extraction for the women involved and the ways in which this has consequences for nationalism and race or Israeli extraction

Diagnostic Fluidity Mette Bech Risør, Nina Nissen, 2018-01-01 Diagnostic procedures are emblematic of medical work Scholars in the field of social studies of medicine identify diverse dimensions of diagnosis that point to controversies processual qualities and contested evidence In this anthology diagnostic fluidity is seen to permeate diagnostic work in a wide range of contexts from medical interactions in the clinic domestic settings and other relations of affective work to organizational structures and in historical developments The contributors demonstrate each in their own way how different agents do diagnosis highlighting the multi faceted elements of uncertainty and mutability integral to diagnostic work At the same time the contributors also show how in doing diagnosis enactments of subjectivities representations of cultural imaginaries bodily processes and socio cultural changes contribute to configuring diagnostic fluidity in significant ways

Suspect Families Torsten Heinemann, Ilpo Helén, Thomas Lemke, Ursula Naue, Martin Weiss, 2016-03-03 *Suspect Families* is the first book to investigate the social political and ethical implications of parental testing for family reunification in immigration cases Drawing on policy documents legal frameworks case study material and interviews with representatives of governmental and non governmental organisation and immigration authorities immigration lawyers geneticists and applicants for family reunification the book analyses the different political regimes and social arrangements in which DNA analysis is adopted for decision making on family reunification in three distinct European countries Austria Finland and Germany Interdisciplinary in scope the book reconstructs the processes institutional logic and the political and administrative practices of DNA testing from a comparative perspective combining theoretical conceptualisation with detailed empirical work to explore the central societal political and ethical issues raised by the use of DNA profiling in the context of immigration policy A ground breaking study of the role played by new technologies in migration decisions *Suspect Families* will appeal to scholars of sociology political science science and technology studies and surveillance studies

Hope and Uncertainty in Health and Medicine Bernhard Hadolt, Andrea Stöckl, 2024-05-06 In health and medicine imagining the future is essential in giving meaning to the past and the present and for propelling people into action This is true not only at the level of individuals as they envision and carry out everyday activities and long term

plans but also for institutional practices framed by and unfolding within various socio political ecologies and transfigurations Hope and uncertainty are critical affective and knowledge related modalities of such imaginations and assume vital meanings in policing managing and experiencing health illness and well being This volume brings together contributions from medical anthropologists who address this theme across various medical spheres including the pragmatics of hope and uncertainty the techno sphere health management and individual and socially distributed emotions **Time Work** Michael G.

Flaherty,Lotte Meinert,Anne Line Dalsgård,2020-06-09 Examining how people alter or customize various dimensions of their temporal experience this volume discovers how we resist external sources of temporal constraint or structure These ethnographic studies are international in scope and look at many different countries and continents They come to the overall conclusion that people construct their own circumstances with the intention to modify their experience of time

Comparative Empirical Bioethics: Dilemmas of Genetic Testing and Euthanasia in Israel and Germany Aviad E. Raz,Silke Schicktanz,2016-04-29 This book is a comprehensive empirically grounded exploration of the relationship between bioethics culture and the perspective of being affected It provides a new outlook on how complex bioethical issues become questions of everyday life The authors focus on two contexts genetic testing and end of life care to locate and demonstrate emerging themes of responsibility such as self responsibility responsibility for kin and the responsibility of society Within these themes the duty to know versus the right not to know one's genetic fate in the context of genetic testing or the sanctity of life versus self determination in the context of end of life care are identified as culturally embedded dilemmas that are very much relevant for lay persons Furthermore cultural factors such as religion history utopian and dystopian views of biomedical technologies outlooks on the body and on health illness and citizenship are examined Health issues are increasingly becoming a question of assessing risk and responsibility How can we better prepare ourselves for the future We all make such assessments in a way that combines personal inclinations professional recommendations and cultural framings There is still much to be learned about the interplay between these three dimensions *De-Sequencing* Dana Mahr,Martina von Arx,2020-12-07 Are you your genes *De Sequencing Identity Work with Genes* explores this perplexing question showing how different forms of knowledge must be contextualized to become meaningful It is generally assumed that the genomic sequence adds up to the identity forming material life is made of Yet identity cannot itself adopt the form of a sequence As the authors in this volume show the genome must be de sequenced by human language to render it interpretable and meaningful in a social context The book unpacks this type of sequence speech in engaging detail adopting a personal social cultural and bio political approach to examine the transformation of human identity and reflexivity in the era of genetic citizenship *Biomedicine as Culture* Regula Valérie Burri,Joseph Dumit,2007-11-21 This volume offers interdisciplinary perspectives on contemporary biomedicine as a cultural practice It brings together leading scholars from cultural anthropology sociology history and science studies to conduct a critical dialogue on the culture s of biomedical practice

discussing its epistemic material and social implications The essays look at the ways new biomedical knowledge is constructed within hospitals and academic settings and at how this knowledge changes perceptions material arrangements and social relations not only within clinics and scientific communities but especially once it is diffused into a broader cultural context

Disclosure Dilemmas Hansjakob Müller, 2017-03-02 There exists today a fast growing availability of personal genetic information Its prognostic impact and value for an individual or family member's health is sometimes unclear whilst at other times it is clear cut The issue of whether to disclose genetic information does however have wide ranging implications Avoiding the rhetoric of genetic exceptionalism and drawing on an expanded field of bioethical sociological and anthropological research this book sets a new agenda for discussing the ethics surrounding the disclosure of prognostic genetic information A hermeneutical approach reconsiders the ethics of disclosure in a variety of contexts in which genetic information is generated requested interpreted or communicated from the provider perspective but also from the moral perspectives of clients and their families It is in situations of disclosure in these different contexts that genetic information meets morality Providers and recipients can become vulnerable to the revelation or concealment of information and the forms in which it may be provided *Disclosure Dilemmas* invites readers to explore these contexts from an ethical viewpoint and will be a valuable resource for anyone with an interest in biomedical ethics

Becoming Donor-Conceived Amelie Baumann, 2021-11-27 While it has been argued that anonymity in gamete donation has been brought to an end by legal changes and technological developments Amelie Baumann suggests that this is in fact still in transformation By focusing on the narratives of those who were conceived with anonymously donated gametes in the UK and Germany she examines this transformative process and the role which donor conceived persons play in it This book shows that it is not someone's decision to procreate that turns being donor conceived into a meaningful categorisation Rather kinship knowledge gets activated by the donor conceived in specific ways for being donor conceived to become a powerful identification

Nameless Relations Monica Konrad, 2005 Based on the author's fieldwork at assisted conception clinics in England in the mid 1990s this is the first ethnographic study of the new procreative practices of anonymous ova and embryo donation Giving voice to both groups of women participating in the demanding donation experience the donors on the one side and the ever hopeful IVF recipients on the other Konrad shows how one dimension of the new reproductive technologies involves an unfamiliar relatedness between nameless and untraceable procreative strangers Offsetting informants local narratives against traditional Western folk models of the sexed reproductive body the book challenges some of the basic assumptions underlying conventional biomedical discourse of altruistic donation that clinicians and others promote as gifts of life It brings together a wide variety of literatures from social anthropology social theory cultural studies of science and technology and feminist bioethics to discuss the relationship between recent developments in biotechnology and changing conceptions of personal origins genealogy kinship biological ownership and notions of bodily integrity

The Cunning of Uncertainty Helga

Nowotny,2015-11-19 Uncertainty is interwoven into human existence It is a powerful incentive in the search for knowledge and an inherent component of scientific research We have developed many ways of coping with uncertainty We make promises manage risks and make predictions to try to clear the mists and predict ahead But the future is inherently uncertain and the mist that shrouds our path an inherent part of our journey The burning question is whether our societies can face up to uncertainty learn to embrace it and whether we can open up to a constantly evolving future In this new book Helga Nowotny shows how research can thrive at the cusp of uncertainty Science she argues can eventually transform uncertainty into certainty but into certainty which remains always provisional Uncertainty is never completely static It is constantly evolving It encompasses geological time scales and at the level of human experience split second changes as cells divide Life and death decisions are taken in the blink of the eye while human interactions with the natural environment may reveal their impact over millennia Uncertainty is cunning It appears at unexpected moments it shuns the straight line takes the oblique route and sometimes the unexpected short cut As we acknowledge the cunning of uncertainty its threats retreat We accept that any scientific inquiry must produce results that are provisional and uncertain This message is vital for politicians and policy makers do not be tempted by small short term controllable gains to the exclusion of uncertain high gain opportunities Wide ranging in its use of examples and enriched by the author s experience as President of the European Research Council one of the world s leading funding organisations for fundamental research *The Cunning of Uncertainty* is a must read for students and scholars of all disciplines politicians policy makers and anyone concerned with the fundamental role of knowledge and science in our societies today [The Human Genome Diversity Project](#) Amade M'Charek,2005-01-20 The Human Genome Diversity Project HGDP was launched in 1991 by a group of population geneticists whose aim was to map genetic diversity in hundreds of human populations by tracing the similarities and differences between them It quickly became controversial and was accused of racism and bad science because of the special interest paid to sampling cell material from isolated and indigenous populations The author spent a year carrying out participant observation in two of the laboratories involved and provides fascinating insights into daily routines and technologies used in those laboratories and also into issues of normativity standardization and naturalisation Drawing on debates and theoretical perspectives from across the social sciences M charek explores the relationship between the tools used to produce knowledge and the knowledge thus produced in a way that illuminates the HGDP but also contributes to our broader understanding of the contemporary life sciences and their social implications **Genetics as Social Practice** Dr Barbara Prainsack,Dr Gabriele Werner-Felmayer,Prof Dr Silke Schicktanz,2014-03-28 Recent debate about the ethical and regulatory dimensions of developments in genetics has sidelined societal and cultural aspects which arguably are indispensable for a nuanced understanding of the complexities of the topic Regulatory and ethical debates benefit from taking seriously this third dimension of culture which often determines the configurations and limits of the space within which scientific ethical and

legal debate can take place To fill this gap this volume brings together contributions exploring the mutual relationships between genetics markets societies and identities in genetics and genomics It draws upon the recent transdisciplinary debate on how socio cultural factors influence understandings of genetics²⁰ and shows how individual and collective identities are challenged or reinforced by cultural meanings and practices of genetics This book will become a standard reference for everyone seeking to make sense of the controversies and shifts in the field of genetics in the second decade of the twenty first century

What's the Use of Race? Ian Whitmarsh, David S. Jones, 2010-04-16 How race as a category reinforced by new discoveries in genetics is used as a basis for practice and policy in law science and medicine The post civil rights era perspective of many scientists and scholars was that race was nothing more than a social construction Recently however the relevance of race as a social legal and medical category has been reinvigorated by science especially by discoveries in genetics Although in 2000 the Human Genome Project reported that humans shared 99.9 percent of their genetic code scientists soon began to argue that the degree of variation was actually greater than this and that this variation maps naturally onto conventional categories of race In the context of this rejuvenated biology of race the contributors to *What's the Use of Race* investigate whether race can be a category of analysis without reinforcing it as a basis for discrimination Can policies that aim to alleviate inequality inadvertently increase it by reifying race differences The essays focus on contemporary questions at the cutting edge of genetics and governance examining them from the perspectives of law science and medicine The book follows the use of race in three domains of governance ruling knowing and caring Contributors first examine the use of race and genetics in the courtroom law enforcement and scientific oversight then explore the ways that race becomes implicitly or explicitly part of the genomic science that attempts to address human diversity and finally investigate how race is used to understand and act on inequities in health and disease Answering these questions is essential for setting policies for biology and citizenship in the twenty first century (K)information Maren Klotz, 2014-05-15

Openness about gamete i.e. sperm or egg donation and the regulation of donor anonymity or non anonymity are new phenomena How do affected families clinics and regulators deal with information about the donors and the donation in Germany and Britain And how does this knowledge management contribute to the making and doing of kinship Addressing these questions through an ethnographic exploration this book makes a comparative contribution to the empirical and theoretical analysis of kin formation and social change in plural late modern societies in Europe The research demonstrates a contemporary re negotiation of the values of privacy information sharing and connectedness with transparency as moral imperative not genetics Instead of an unambiguously discernible geneticisation the findings on donor non anonymity and parental openness display a pattern of transparentization In ensemble a shift of authority becomes evident more minute in Germany than in Britain towards concerned groups parents by donation and policy makers away from a sometimes high handed reproductive medical profession

The Cancer Within Cristina A. Pop, 2022-05-13 The *Cancer Within* examines

cervical cancer in Romania as a point of entry into an anthropological reflection on contemporary health care Cervical cancer prevention reveals the inner workings of emerging post communist medicine which aligns the state and the market public and private health care providers policy makers and ordinary women Fashioned by patriarchal relations lived religion and the historical trauma of pronatalism Romanian women s responses to reproductive medicine and cervical cancer prevention are complicated by neoliberal reforms to medical care Cervical cancer prevention and especially the HPV vaccination provided Romanians a legitimate instance to express their conflicting views of post communist medicine What sets Romania apart is that pronatalism patriarchy lived religion medical reforms and moral contestation of preventive medicine bring into line systemic contingencies that expose the historical social and cultural trajectories of cervical cancer

Making and Unmaking Public Health in Africa Ruth J. Prince, Rebecca Marsland, 2013-11-15 Africa has emerged as a prime arena of global health interventions that focus on particular diseases and health emergencies These are framed increasingly in terms of international concerns about security human rights and humanitarian crisis This presents a stark contrast to the 1960s and 70s when many newly independent African governments pursued the vision of public health for all of comprehensive health care services directed by the state with support from foreign donors These initiatives often failed undermined by international politics structural adjustment and neoliberal policies and by African states themselves Yet their traces remain in contemporary expectations of and yearnings for a more robust public health This volume explores how medical professionals and patients government officials and ordinary citizens approach questions of public health as they navigate contemporary landscapes of NGOs and transnational projects faltering state services and expanding privatization Its contributors analyze the relations between the public and the private providers of public health from the state to new global biopolitical formations of political institutions markets human populations and health Tensions and ambiguities animate these complex relationships suggesting that the question of what public health actually is in Africa cannot be taken for granted Offering historical and ethnographic analyses the volume develops an anthropology of public health in Africa Contributors Hannah Brown P Wenzel Geissler Murray Last Rebecca Marsland Lotte Meinert Benson A Mulemi Ruth J Prince No mi Tousignant and Susan Reynolds Whyte

Hoover masterfully weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can prevail. Narrating The New Predictive Genetics Ethics Ethnography And Science : Taylor Jenkins Reids "The Seven Husbands of Evelyn Hugo" This spellbinding historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reids compelling storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Narrating The New Predictive Genetics Ethics Ethnography And Science : Delia Owens "Where the Crawdads Sing" This evocative coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens weaves a tale of resilience, survival, and the transformative power of nature, entrancing readers with its evocative prose and mesmerizing setting. These top-selling novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of compelling stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a exceptional and gripping novel that will keep you guessing until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
