*Learning at NASA* Julianne G. important element of NASA's space science enterprise While several NRC studies have considered aspects of PI led missions  
in the course of other studies for NASA issues facing the PI led missions in general have not been subject to much analysis in  
those studies Nevertheless these issues are raising increasingly important questions for NASA and it requested the NRC to  
explore them as they currently affect PI led missions Among the issues NASA asked to have examined were those concerning  
cost and scheduling the selection process relationships among PI led team members and opportunities for knowledge  
transfer to new PIs This report provides a discussion of the evolution and current status of the Piled mission concept the  
ways in which certain practices have affected its performance and the steps that can carry it successfully into the future The

control processes and tools but according to *The Smart Mission* that is not the right way to run a project Human skills and  
expertise not technical tools are what make projects successful Projects run on knowledge This paradigm shifting book by  
three project management experts all of whom have decades of experience at NASA and elsewhere challenges the  
conventional wisdom on project management focusing on the human dimension learning collaboration teaming  
communication and culture The authors emphasize three themes projects are fundamentally about how teams work and learn  
together to get things done the local level not an organization's upper levels is where the action happens and projects don't  
operate in a vacuum but exist within organizations that are responsible to stakeholders Drawing on examples and case  
studies from NASA and other organizations the authors identify three project models micro macro and global and their  
different knowledge needs Successful organizations have a knowledge based culture Successful project management guides  
the interplay of knowledge projects and people
