Brooks, Domenic J. Maglieri, 1959 **The Aerodynamic Design of Wings with Cambered Span Having Minimum Induced Drag** Clarence D. Cone (Jr.), 1963 The basic aerodynamic relations needed for the design of wings with cambered span having a minimum induced drag at specified flight conditions are developed for wings of arbitrary spanwise camber Procedures are also developed for determining the physical wing form required to obtain the maximum value of lift drag ratio at cruise when the wing spanwise camber line and section profiles are specified by optimizing the wing chord and twist distributions with respect to both profile and induced drags The application of the design procedure is illustrated by determining the physical wing form for a circular arc spanwise camber line The efficiency of this cambered wing is compared with that of an equal span flat wing of elliptical planform which satisfies the same set of flight operating conditions as does the cambered wing The wing pitching moment equations for optimally loaded cambered span wings at design flight conditions are also developed for use in trim analyses on complete aircraft designs Page 1 **Lift and Drag Characteristics at Subsonic Speeds and at a Mach Number of 1.9 of a Lifting Circular Cylinder with a Fineness Ratio of 10** Vernard E. American aircraft as the DC 3 X 1 and 747 Recognizing the impact individuals have had on the development of the field he conveys not only a history of aircraft technology but also a collective biography of the scientists engineers and designers who created the airplanes From da Vinci whose understanding of what it took to fly was three centuries too early for practical use to the invention of the airplane by the Wright brothers Hansen explores the technological matrix from which aeronautical engineering emerged He skillfully guides the reader through the development of such critical aerodynamic concepts as streamlining flutter laminar flow airfoils the mythical sound barrier variable sweep wing supersonic cruise blended body and much more Hansen s explanation of how vocabulary and specifications were developed to fill the gap between the perceptions of pilots and the system of engineers will fascinate all those interested in how human beings have used aerodynamics to move among and even beyond birds on the wing *Technical Publications Announcements with Indexes* United States.
