**The North American Perching and Dabbling Ducks** Paul Johnsgard, 2017-03 This volume the fourth in a series of books that collectively update and expand P A Johnsgard's 1975 *The Waterfowl of North America* summarizes research findings on this economically and ecologically important group of waterfowl The volume includes the mostly tropical perching duck tribe Cairinini of which two species the muscovy duck and

the wood duck are representatives Both species are adapted for foraging on the water surface mostly on plant materials but typically perch in trees and nest in elevated tree cavities or other elevated recesses This volume also includes the dabbling or surface feeding duck tribe Anatini a large assemblage of duck species that mainly forage on the water surface but nest on the ground or only very rarely in elevated locations Of this tribe 12 species that regularly breed in North America are included among them such familiar species as mallards wigeons pintails and teal Descriptive accounts of the distributions populations ecologies social sexual behaviors and breeding biology of all these species are provided together with distribution maps Five additional Eurasian and West Indian species have been reported several times in North America these have been included with more abbreviated accounts but all 17 species are illustrated by drawings photographs or both The text includes about 84 000 words and contains more than 1 000 references There are also 12 distribution maps 21 drawings 28 photographic plates and 58 anatomical or behavioral sketches

The Ecology and Management of Breeding Waterfowl ,1992      **The North American Sea Ducks** Paul Johnsgard,2016-11-09 The 21 species of sea ducks are one of the larger subgroups Tribe Mergini of the waterfowl family Anatidae and the 16 species one historically extinct that are native to North America represent the largest number to be found on any continent and also the largest number of endemic sea duck species native to any continent Although generally not important as game birds the sea ducks include some economically important birds such as the eiders the basis for the Arctic eiderdown industry and a historically important food source for some Native American cultures They also include what is probably the most northerly breeding species of all waterfowl and an icon of Arctic bird life the long tailed duck The sea ducks also include species having some of the most complex and diverse pair forming postural and acoustic displays of all waterfowl goldeneyes and bufflehead and some of the deepest diving species of all waterfowl scoters and long tailed duck Sea ducks are highly prone to population disasters caused by oil spills and other water contaminants and like other seabirds are among the first bird groups that are being affected by current global warming trends in polar regions This book is an effort to summarize succinctly our current knowledge of sea duck biology and to provide a convenient survey of the vast technical literature on the group with over 900 literature references It also includes 90 000 words of text more than 40 percent of which is new 15 updated range maps 11 black white and 20 color photographs over 30 ink drawings and nearly 150 sketches Lastly the North American sea ducks include the now extinct Labrador duck the only northern hemisphere waterfowl species to have gone extinct in modern times I have gratefully reprinted a Labrador duck watercolor by Sir Peter Scott Considering recent population crashes in other sea ducks such as the Steller s eider and spectacled eider it should also offer a sobering reminder of the fragility of our natural world and its inhabitants including us

**Waterfowl Management Handbook** Jan Louise Eldridge,1990      **The North American Whistling-Ducks, Pochards, and Stiffetails** Paul Johnsgard,2017-03-24 Although the 12 species representing three waterfowl tribes described in this volume are not closely related they fortuitously provide an instructive example of adaptive

evolutionary radiation within the much larger waterfowl lineage the family Anatidae especially as to their divergent morphologies life histories and social behaviors The whistling ducks *Dendrocygna* with three known North American species are notable for their permanent pair bonds extended biparental family care and strong social cohesion In contrast males of the five typical pochards of North American diving ducks *Aythya* establish monogamous pair bonds that are maintained only long enough to assure that the female's eggs are fertilized The endpoint of this behavioral gradient promiscuity or polygyny exists among at least some of the typical stiff-tails *Oxyura* Such diverse reproductive strategies have exerted powerful evolutionary influences on interspecies variations in sexual dimorphism sexual behavior anatomy ecology and other traits This volume includes more than 63 000 words plus some 200 maps photos drawings and sketches and nearly 650 literature citations It is the last of five volumes that describe all 55 waterfowl species that have been historically documented in North America collectively the volumes total over 300 000 words with nearly 3 000 literature citations and more than 600 maps photos drawings and sketches **Ducks, Geese, and Swans: Species accounts (Cairina to Mergus)** Janet Kear, 2005
