Natural Minimal Surfaces Via Theory And Computation:

Global Analysis of Minimal Surfaces Ulrich Dierkes, Stefan Hildebrandt, Anthony Tromba, 2010-08-16 Many properties of minimal surfaces are of a global nature and this is already true for the results treated in the first two volumes of the treatise Part I of the present book can be viewed as an extension of these results For instance the first two chapters deal with existence regularity and uniqueness theorems for minimal surfaces with partially free boundaries Here one of the main features is the possibility of edge crawling along free parts of the boundary The third chapter deals with a priori estimates for minimal surfaces in higher dimensions and for minimizers of singular integrals related to the area functional In particular far reaching Bernstein theorems are derived The second part of the book contains what one might justly call a global theory of minimal surfaces as envisioned by Smale First the Douglas problem is treated anew by using Teichmüller theory Secondly various index theorems for minimal theorems are derived and their consequences for the space of solutions to Plateau's problem are discussed Finally a topological approach to minimal surfaces via Fredholm vector fields in the spirit of Smale is presented

Minimal Surfaces Ulrich Dierkes, Stefan Hildebrandt, Friedrich Sauvigny, 2010-08-16 Minimal Surfaces is the first volume of a three volume treatise on minimal surfaces Grundlehren Nr 339 341 Each volume can be read and studied independently of the others The central theme is boundary value problems for minimal surfaces The treatise is a substantially revised and extended version of the monograph Minimal Surfaces I II Grundlehren Nr 295 this is done in the context of stable H surfaces i.e. of stable surfaces of prescribed mean curvature H especially of cmc surfaces $H = \text{const}$ and leads to curvature estimates for stable immersed cmc surfaces and to Nitsche's uniqueness theorem and Tomi's finiteness result In addition a theory of unstable solutions of Plateau's problems is developed which is based on Courant's mountain pass lemma Furthermore Dirichlet's problem for nonparametric H surfaces is solved using the solution of Plateau's problem for H surfaces and the pertinent estimates

Regularity of Minimal Surfaces Ulrich Dierkes, Stefan Hildebrandt, Anthony Tromba, 2010-08-16 Regularity of Minimal Surfaces begins with a survey of minimal surfaces with free boundaries Following this the basic results concerning the boundary behaviour of minimal surfaces and H surfaces with fixed or free boundaries are studied In particular the asymptotic expansions at interior and boundary branch points are derived leading to general Gauss Bonnet formulas Furthermore gradient estimates and asymptotic expansions for minimal surfaces with only piecewise smooth boundaries are obtained One of the main features of free boundary value problems for minimal surfaces is that for principal reasons it is impossible to derive a priori estimates Therefore regularity proofs for non minimizers have to be based on indirect reasoning using monotonicity formulas This is followed by a long chapter discussing geometric properties of minimal and H surfaces such as enclosure theorems and isoperimetric inequalities leading to the discussion of obstacle problems and of Plateau's problem for H surfaces in a Riemannian manifold A natural generalization of the isoperimetric problem is the so called thread problem dealing with minimal surfaces whose boundary consists of a fixed arc of given length

Existence and regularity of solutions are discussed The final chapter on branch points presents a new approach to the theorem that area minimizing solutions of Plateau's problem have no interior branch points *Minimal Surfaces II* Ulrich Dierkes, Stefan Hildebrandt, Albrecht Küster, Ortwin Wohlrab, 2013-03-14 *Minimal Surfaces I* is an introduction to the field of minimal surfaces and a presentation of the classical theory as well as of parts of the modern development centered around boundary value problems Part II deals with the boundary behaviour of minimal surfaces Part I is particularly apt for students who want to enter this interesting area of analysis and differential geometry which during the last 25 years of mathematical research has been very active and productive Surveys of various subareas will lead the student to the current frontiers of knowledge and can also be useful to the researcher The lecturer can easily base courses of one or two semesters on differential geometry on Vol 1 as many topics are worked out in great detail Numerous computer generated illustrations of old and new minimal surfaces are included to support intuition and imagination Part 2 leads the reader up to the regularity theory for nonlinear elliptic boundary value problems illustrated by a particular and fascinating topic There is no comparably comprehensive treatment of the problem of boundary regularity of minimal surfaces available in book form This long awaited book is a timely and welcome addition to the mathematical literature **Numerical Methods and Applications** Ivan Lirkov, Svetozar Margenov, Zahari Zlatev, 2003 **Differential Geometry: Partial Differential Equations on Manifolds** Robert Everist Greene, Shing-Tung Yau, 1993 The first of three parts comprising Volume 54 the proceedings of the Summer Research Institute on Differential Geometry held at the University of California Los Angeles July 1990 ISBN for the set is 0 8218 1493 1 Part 1 begins with a problem list by S T Yau successor to his 1980 list Sem **Minimal Surfaces: Boundary regularity** Ulrich Dierkes, 1992 *Video Collections and Multimedia in ARL Libraries* C. López, 2021-03-10 This monograph offers the first systematic treatment of the theory of minimal surfaces in Euclidean spaces by complex analytic methods many of which have been developed in recent decades as

part of the theory of Oka manifolds the h principle in complex analysis It places particular emphasis on the study of the global theory of minimal surfaces with a given complex structure Advanced methods of holomorphic approximation interpolation and homotopy classification of manifold valued maps along with elements of convex integration theory are implemented for the first time in the theory of minimal surfaces The text also presents newly developed methods for constructing minimal surfaces in minimally convex domains of \mathbb{R}^n based on the Riemann Hilbert boundary value problem adapted to minimal surfaces and holomorphic null curves These methods also provide major advances in the classical Calabi Yau problem yielding in particular minimal surfaces with the conformal structure of any given bordered Riemann surface Offering new directions in the field and several challenging open problems the primary audience of the book are researchers including postdocs and PhD students in differential geometry and complex analysis Although not primarily intended as a textbook two introductory chapters surveying background material and the classical theory of minimal surfaces also make it suitable for preparing Masters or PhD level courses
