Carl Jay Bajema

Natural Selection Heredity:

Darwinism's Struggle for Survival Jean Gayon, 1998-08-06 A rich and wide ranging philosophical interpretation of the history of theoretical Darwinism **Natural Selection and Heredity** Philip MacDonald Sheppard, 1975 Natural Selection, Heredity, and Eugenics Sir Ronald Aylmer Fisher, Leonard Darwin, 1983 This selection of R A Fisher's unpublished papers and his correspondence with Charles Darwin's son Leonard and other important contemporaries elucidates much of what influenced him in writing one of the landmarks of twentieth century biology The Genetical Theory of Natural Selection Also reflected in the correspondence are Fisher's interests in research of blood groups the effects of inbreeding and the importance of geographical variation in disease patterns **Natural Selection and Heredity** Philip M. Sheppard, 1967

Natural Selection and Genetic Drift Joshua Richardson, 2016 Natural selection is the process which being the most important factor of evolution promotes rising of adaptability and prevents destructive consequences of all other processes The concept of natural selection is a discordant problem of evolutionary human genetics Despite popularity of a hypothesis of neutral evolution the majority of scientists consider that selection has played main role in evolution of species and has generated all biological diversity of human populations This book presents research on natural selection and genetic drift The author of the first chapter provides an all embracing macroevolutionary perspective on the processes of the evolution of life and culture on earth The author investigates a complementary form of natural selection that diverges from the traditional form in that it is acting independently of the external environment The next chapter discusses natural selection and diabetes mellitus The last chapter examines how the genetic drift among native people from South American the Gran Chaco region affects interleukin 1 receptor antagonist variation **Natural Selection and Heredity** P. M. Sheppard, 1959

Weismann's Theory of Heredity George John Romanes, 1891 *Heredity Explored* Staffan Müller-Wille, Christina Brandt, 2016-07-08 This book examines the wide range of scientific and social arenas in which the concept of inheritance gained relevance in the late nineteenth and early twentieth centuries Although genetics emerged as a scientific discipline during this period the idea of inheritance also played a role in a variety of medical agricultural industrial and political contexts The book which follows an earlier collection *Heredity Produced* covering the period 1500 to 1870 addresses heredity in national debates over identity kinship and reproduction biopolitical conceptions of heredity degeneration and gender agro industrial contexts for newly emerging genetic rationality heredity and medical research and the genealogical constructs and experimental systems of genetics that turned heredity into a representable and manipulable object Taken together the essays in *Heredity Explored* show that a history of heredity includes much more than the history of genetics and that knowledge of heredity was always more than the knowledge formulated as Mendelism It was the broader public discourse of heredity in all its contexts that made modern genetics possible **The Structure of Biological Theories** Paul Thompson, 1989-01-01 The central thesis of this book is that the semantic conception is a logical methodologically and

heuristically richer and more accurate account of scientific theorizing and in particular of theorizing in evolutionary biology than the more widely adhered to syntactic conception In this book the author outlines both the conceptions indicating the significant problems with the syntactic conception explains and criticizes two influential syntactic conception accounts of the structure of evolutionary theorizing Thompson also argues that the semantic conception provides a richer and more accurate understanding than the syntactic conception of sociobiological explanation of the testability of sociobiology and of the role of culture and cognition in evolutionary explanations of human behavior An Introduction to Population Genetics Theory J.F. Crow, 2017-01-01 This text book originally published in 1970 presents the field of population genetics starting with elementary concepts and leading the reader well into the field It is concerned mainly with population genetics in a strict sense and deals primarily with natural populations and less fully with the rather similar problems that arise in breeding live stock and cultivated plants The emphasis is on the behavior of genes and population attributes under natural selection where the most important measure is Darwinian fitness This text is intended for graduate students and advanced undergraduates in genetics and population biology This book steers a middle course between completely verbal biological arguments and the rigor of the mathematician The first two thirds of the book do not require advanced mathematical background An ordinary knowledge of calculus will suffice The latter parts of the book which deal with population stochastically use more advanced methods Natural Selection in Human Populations Carl Jay Bajema, 1977 *Essays upon heredity and kindred biological problems v. 1, 1891* August Weismann, 1891 **The Journal of Heredity**, 1917 The journal discusses articles on gene action regulation and transmission in both plant and animal species including the genetic aspects of botany cytogenetics and evolution zoology and molecular and developmental biology **"The" Fortnightly Review**, 1895 The Fortnightly, 1895 *Classified Catalogue* Carnegie Library of Pittsburgh, 1920 *Classified Catalogue of the Carnegie Library of Pittsburgh* Carnegie Library of Pittsburgh, 1920 *Inheritance and Evolution* Denise Walker, 2009-09-30 This series is an introduction to key scientific principles and processes This volume introduces the reader to the development of species on planet Earth Find out how characteristics are inherited and explore the evidence surrounding natural selection evolution and extinction *The origin of species* Charles Darwin, 1945 **Classified Catalogue of the Carnegie Library of Pittsburgh, 1912-1916** Carnegie Library of Pittsburgh, 1920
