Moody, 2013-03-15 In this engaging introductory dialogue Todd Moody maps the spectrum of philosophical arguments and counterarguments for the existence of God Structuring colloquial conversations along classical lines he presents a lively and accessible discussion of issues that are central to both theist and atheist thinking including the burden of proof the first cause a necessary being the natural order suffering miracles experience as knowledge and rationality without proof The second edition is a significant and comprehensive revision Moody broadens and deepens the conversation by addressing additional arguments such as the problem of animal suffering the moral argument intelligent design and human exceptionalism The discussion of the cosmological argument is updated to reflect recent work on the Kalam Cosmological Argument A short preface explains the scope of the work and the purpose of the dialogue form Suggested further readings of contemporary and classical sources are also included

Nature's Laboratory Elizabeth Grennan Browning, 2022-11-15 The untold history of how Chicago served as an important site of innovation in environmental thought as America transitioned to modern industrial capitalism In *Nature's Laboratory* Elizabeth Grennan Browning argues that Chicago a city characterized by rapid growth severe labor unrest and its position as a gateway to the West offers the clearest lens for analyzing the history of the intellectual divide between countryside and city in the United States at the end of the nineteenth century By examining both the material and intellectual underpinnings of Gilded Age and Progressive Era environmental theories Browning shows how Chicago served as an urban laboratory where public intellectuals and industrial workers experimented with various strains of environmental thinking to resolve conflicts between capital and labor between citizens and their governments and between immigrants and long term residents Chicago she argues became the taproot of two intellectual strands of American environmentalism both emerging in the late nineteenth century first the conservation movement and the discipline of ecology and second the sociological and anthropological study of human societies as natural communities where human behavior was shaped in part by environmental conditions Integrating environmental labor and intellectual history *Nature's Laboratory* turns to the workplace to explore the surprising ways in which the natural environment and ideas about nature made their way into factories and offices places that appeared the most removed from

the natural world within the modernizing city As industrialization urbanization and immigration transformed Chicago into a microcosm of the nation s transition to modern industrial capitalism environmental thought became a protean tool that everyone from anarchists and industrial workers to social scientists and business managers looked to in order to stake their claims within the democratic capitalist order Across political and class divides Chicagoans puzzled over what relationship the city should have with nature in order to advance as a modern nation Browning shows how historical understandings of the complex interconnections between human nature and the natural world both reinforced and empowered resistance against the stratification of social and political power in the city

Buddhist Philosophy William Edelglass, Jay Garfield, 2009-04-21 The Buddhist philosophical tradition is vast internally diverse and comprises texts written in a variety of canonical languages It is hence often difficult for those with training in Western philosophy who wish to approach this tradition for the first time to know where to start and difficult for those who wish to introduce and teach courses in Buddhist philosophy to find suitable textbooks that adequately represent the diversity of the

tradition expose students to important primary texts in reliable translations that contextualize those texts and that foreground specifically philosophical issues Buddhist Philosophy fills that lacuna It collects important philosophical texts from each major Buddhist tradition Each text is translated and introduced by a recognized authority in Buddhist studies Each introduction sets the text in context and introduces the philosophical issues it addresses and arguments it presents providing a useful and authoritative guide to reading and to teaching the text The volume is organized into topical sections that reflect the way that Western philosophers think about the structure of the discipline and each section is introduced by an essay explaining Buddhist approaches to that subject matter and the place of the texts collected in that section in the enterprise This volume is an ideal single text for an intermediate or advanced course in Buddhist philosophy and makes this tradition immediately accessible to the philosopher or student versed in Western philosophy coming to Buddhism for the first time It is also ideal for the scholar or student of Buddhist studies who is interested specifically in the philosophical dimensions of the Buddhist tradition

Forester ... ,1913 Man at Nature's Pinnacle Moses Ekebuisi,2025-02-06 The novel was inspired by a combination of the scientific and mystical experience of the author It is about the importance and significance of man s interrelationships with animals and plants as demonstrated in ancient Europe Through the mystical experience of the chief character in the novel the mysteries of nature and the role and position of man in nature were revealed The novel unveils how all life is interconnected It reveals the validity of the concepts held by the ancients in their religion With their mystical insight they perceived all the creations on the earth and in the sky including the sun as authentic symbols of the eternal power and divine nature of God They perceived the fact that all life is interconnected and that no life exists in isolation independent of the others and that a change in one lifeform cannot be fully understood without considering the simultaneous changes in the others This concept is held in the Buddhist religion It is present in the theory by Gaia the ancient Greek earth goddess and in the Bible The concept has been proven valid by modern science Based on this idea the ancients venerated nature and the sun The evidence of this is seen in the ancient Greek cult of the earth goddess in the ancient Egyptian cult of the sun god in the Stonehenge in England and the Newgrange in Ireland and their connection with the solstice Based on these facts the novel was set in the Prehistoric Age in Europe It was the period when the ancient people lived in the land in which the research was carried out It was also the period they practised their religion and when man s mystical insight was intact The chief character in the novel is Ward a farmer Through his occupation and mystical experience he revealed the mysteries of nature the importance and significance of interrelationships of organisms and the position and role of man in nature that man is at nature s pinnacle where he is designed to be to sustain and be sustained
