Nature And Landscapes:

Nature and Landscape Allen Carlson, 2009 The roots of environmental aesthetics reach back to the ideas of eighteenth century thinkers who found nature an ideal source of aesthetic experience Today having blossomed into a significant subfield of aesthetics environmental aesthetics studies and encourages the appreciation of not just natural environments but also human made and human modified landscapes Nature and Landscape is an important introduction to this rapidly growing area of aesthetic understanding and appreciation Allen Carlson begins by tracing the development of the field's historical background and then surveys contemporary positions on the aesthetics of nature such as scientific cognitivism which holds that certain kinds of scientific knowledge are necessary for a full appreciation of natural environments Carlson next turns to environments that have been created or changed by humans and the dilemmas that are posed by the appreciation of such landscapes He examines how to aesthetically appreciate a variety of urban and rural landscapes and concludes with a discussion of whether there is in general a correct way to aesthetically experience the environment

Landscape Perspectives Marc Antrop, Veerle Van Eetvelde, 2018-01-09 Climb a mountain and experience the landscape Try to grasp its holistic nature Do not climb alone but with others and share your experience Be sure the ways of seeing the landscape will be very different We experience the landscape with all senses as a complex dynamic and hierarchically structured whole The landscape is tangible out there and simultaneously a mental reality Several perspectives are obvious because of language culture and background Many disciplines developed to study the landscape focussing on specific interest groups and applications Gradually the holistic way of seeing became lost This book explores the different perspectives on the landscape in relation to its holistic nature We start from its multiple linguistic meanings and a comprehensive overview of the development of landscape research from its geographical origins to the wide variety of today's specialised disciplines and interest groups Understanding the different perspectives on the landscapes and bringing them together is essential in transdisciplinary approaches where the landscape is the integrating concept

On Landscapes Susan Herrington, 2013-12-19 There is no escaping landscape it's everywhere and part of everyone's life Landscapes have received much less attention in aesthetics than those arts we can choose to ignore such as painting or music but they can tell us a lot about the ethical and aesthetic values of the societies that produce them Drawing on examples from a wide range of landscapes from around the world and throughout history Susan Herrington considers the ways landscapes can affect our emotions our imaginations and our understanding of the passage of time On Landscapes reveals the design work involved in even the most naturalistic of landscapes and the ways in which contemporary landscapes

are turning the challenges of the industrial past into opportunities for the future Inviting us to thoughtfully see and experience the landscapes that we encounter in our daily lives On Landscapes demonstrates that art is all around us

Nature's Ideological Landscape Kenneth Olwig, 2021-09-23 Originally published in 1984 Nature s Ideological Language examines the common ideological roots of environmental reclamation and nature preservation In the general context of European British and American historical experience the Jutland heaths of Denmark are taken as a concrete example for a general critique of European and American policy concerning the use of landscape Two sets of

contradictions are highlighted ideological and practical between development and preservation and those between scientific historical aesthetic and recreational motivation for preservation The book is based on a study of the Jutland heath from 1750 to the present focusing on the Danish perception of the area as expressed in literary art and in economic journals topographies and government reports Against this background the development of the modern conception of nature is traced and its ideological implications and planning consequences discussed As a study of humanistic geography this book will be of interest to geographers conservationists and planners *Nature, Landscape, and Building for Sustainability* William S. Saunders, 2008 The complexity and scale of the environmental problems confronting humanity today provoke a wide range of responses from indifference to anger to creativity Among a growing number of architects landscape architects and planners however these problems have inspired a new vision sustainability to guide their practices In *Nature Landscape and Building for Sustainability* a diverse group of contributors considers the concept of sustainability both philosophically and practically Some take a broad view of the divisions between nature and humanity exploring the incomprehensible scale of human intervention in the natural world the relationship between how we feel about nature and what we do about it and the commodification of the natural world Other essays focus on sustainable design practices sustainability's roots in the American conservation tradition its utility as a framework for future design practice and the necessity of moving beyond demonstration projects into the mainstream Together these essays suggest that the gap between the promise and reality of sustainable design although significant can be bridged through diligence and practice Contributors D Michelle Addington Yale U John Beardsley Harvard Graduate School of Design Albert Borgmann U of Montana Missoula Peter Buchanan Peter Del Tredici Harvard Graduate School of Design Robert France Harvard Graduate School of Design Susannah Hagan U of East London Kristina Hill U of Virginia Catherine Howett U of Georgia Niall Kirkwood Harvard Graduate School of Design Lucy R Lippard Bill McKibbin Michael Pollan Rossana Vaccarino Vaccarino Associates St Thomas William S Saunders is editor of Harvard Design Magazine and assistant dean for external relations at Harvard University's Graduate School of Design He is editor of five previous Harvard Design Magazine Readers published by the University of Minnesota Press Robert L Thayer Jr is emeritus professor of landscape architecture and founder of the landscape architecture program at the University of California Davis National and Regional Approaches for Ecological Networks in Europe R. Landscapes Maggie Roe,Ken Taylor,2014-01-21 While historical and protected landscapes have been well studied for years the cultural significance of ordinary landscapes is now increasingly recognised This groundbreaking book discusses how contemporary cultural landscapes can be and are created and recognised The book challenges common concepts of cultural landscapes as protected or special landscapes that include significant buildings or features Using case studies from around the world it questions the usual measures of judgement related to cultural landscapes and instead focuses on landscapes that are created planned or simply evolve as a result of changing human cultures management policy and practice Each contribution analyses the geographical and human background of the landscape and policies and management strategies that impact upon it and defines the meanings of cultural landscape in its particular context Taken together they establish a new paradigm in the study of landscapes in all forms
