Greenland provides extensive and richly illustrated area specific knowledge about Greenland's nature and landscape history culture society and businesses as well as its towns and settlements. A total of 87 mainly Greenlandic researchers and experts have contributed with their knowledge to this book about the most essential topics from Cape Morris Jesup to Uummannarsuaq Cape Farewell and from Qaanaaq to Danmarkshavn. Covering almost 2.5 million km<sup>2</sup> and with a population of around 56 000, Greenland is the world's largest island and most sparsely populated area. Gain an insight into the history of geological formations and read about the ice sheet which as a result of melting and global warming is now the subject of increased international interest. Understand the background of the marvelous icebergs at Qeqertarsuup Tunua and take the dog sled or snowmobile to the small remote and self-sufficient settlements. Take a tour of the capital of Nuuk and the other towns on the southern part of the west coast. This was where Danish-Norwegian missionary Hans Egede first set foot in 1721 and from where the Danish colonization began which had a severe impact on Inuit culture. Read about modernization endeavors, the calls for secession, the influence of the rock band Sume and the referendums in 1979 and 2008 that led to Greenlandic self-government. Learn about the traditional culture featuring elements such as the drum dance which has seen renewed interest and has been included on UNESCO's World Heritage List of Intangible Cultural Heritage. Greenland covers all the essentials. From the most common to the most special.

**The 1972 World Heritage Convention**, 2023-10-02

Almost fifty years have passed since the adoption of the Convention Concerning the Protection of the World Cultural and Natural Heritage, the UNESCO World Heritage Convention. With its 194 States Parties, it is the most widely ratified convention within the family of UNESCO treaties on the protection of cultural heritage. The success of this Convention and its almost universal acceptance by the international community of states is due to the great appeal that recognising certain properties as world heritage has for national governments. Since the publication of the first Commentary, new problems have arisen in the management of world heritage sites. It has become increasingly difficult to properly monitor the conservation of the ever growing mass of sites inscribed in the World Heritage List and to resolve disputes over the formal designation of contested world heritage properties, a problem that has led to the withdrawal of the United States and Israel from UNESCO. New frontiers are now being explored for the expansion of the world heritage idea over marine areas beyond national jurisdiction and the monopoly of the State in the identification, delineation and presentation of world heritage properties is being increasingly challenged in the name of indigenous peoples' rights and by local communities claiming ownership over contested cultural sites. At the same time, the regime of world heritage protection has infiltrated other areas of international law, especially international economic law, investment

arbitration and the area of international criminal law This second edition critically examines the World Heritage Convention against this dynamic evolution of international heritage law to help academics lawyers diplomats and officials interpret and apply the norms of the Convention after half a century of uninterrupted implementing practice by State Parties and Treaty Bodies

**On the Nature of Ecological Paradox** Michael Charles Tobias, Jane Gray Morrison, 2021-05-18 This work is a large powerfully illustrated interdisciplinary natural sciences volume the first of its kind to examine the critically important nature of ecological paradox through an abundance of lenses the biological sciences taxonomy archaeology geopolitical history comparative ethics literature philosophy the history of science human geography population ecology epistemology anthropology demographics and futurism The ecological paradox suggests that the human biological and from an insular perspective successful struggle to exist has come at the price of isolating *H sapiens* from life sustaining ecosystem services and far too much of the biodiversity with which we find ourselves at crisis level odds It is a paradox dating back thousands of years implicating millennia of human machinations that have been utterly ruinous to biological baselines Those metrics are examined from numerous multidisciplinary approaches in this thoroughly original work which aids readers particularly natural history students who aspire to grasp the far reaching dimensions of the Anthropocene as it affects every facet of human experience past present and future and the rest of planetary sentience With a Preface by Dr Gerald Wayne Clough former Secretary of the Smithsonian Institution and President Emeritus of the Georgia Institute of Technology Foreword by Robert Gillespie President of the non profit Population Communication

**Nipisat - a Saqqaq Culture Site in Sisimiut, Central West Greenland** Anne Birgitte Gotfredsen, Tinna Møbjerg, 2004 From 1989 to 1994 more than 200 m<sup>2</sup> were excavated at the Saqqaq site of Nipisat situated on a small island 15 km south of Sisimiut The excellent preservation conditions for organic material and the fact that some of the stone artefacts were not previously known from the Saqqaq Culture were the main reasons for the excavation More than 70 000 bone fragments 20 000 flakes and 1 000 artefacts were recovered A total of 33 dates making this site one of the best dated in the entire Arctic reveal that Nipisat was occupied continuously for nearly 1 500 years Although protruding bedrock disturbed the stratigraphy and several lenses of crushed shells interrupted the layers three different chronological phases could be identified Phase 1 is dated by eight 14C dates ranging from 2020 to 1740 BC cal Phase 2 partly overlaps but is mainly younger than phase 1 and dated by five 14C dates to 1860 1325 BC cal Phase 3 is dated by 16 14C dates to 1310 810 BC cal One date was very young 520 BC cal and problematic because of extreme oscillations of the 14C curve From phase 1 there is a mid passage structure with a box hearth A ring of flagstones surrounds the structure From phase 2 there is a well defined box hearth There was no clear outline of a tent ring surrounding the hearth which could be due to later disturbances in phase 3 No dwelling structures were recognised from phase 3 Instead several sherds of soapstone were recorded indicating the use of blubber for light or cooking From phase 1 and 2 the tool types are well known from other Saqqaq sites in Greenland and Arctic Canada e g small harpoon endblades

projectile points knife blades scrapers burins etc and needles flint flakers harpoon heads wedges etc But from phase 3 previously unknown types were recorded A new tool kit for sea mammal hunting is seen in the very sturdy harpoon or lance head made of antler In addition there are many different kinds of barbed leisters or spears New types of bevelled harpoon heads bevelled knife blades and bevelled projectile points all made of killiaq silicified slate were also registered The faunal assemblage of Nipisat yielded 28 823 identified bone fragments representing at least 42 species of fish birds and mammals The fish remains comprising c 2% of the faunal material consisted nearly entirely 98% of fairly large sized cod The bird remains comprise c 47% of the material and derive from at least 24 bird species Gulls are the dominant group c 54% of the bird remains followed by eider ducks spp 24% and spp 13% presumably barnacle geese while auks were found in lower frequencies The most spectacular finds however were skeletal remains of subadult great auks from the oldest phase A total of 60 presumed whooper swan remains constitute the hitherto largest northernmost and oldest occurrence in Greenland At least 14 mammalian species were identified revealing a surprisingly large proportion of caribou 51% of the mammal remains for a coastal site Seals accounted for 45% with the common seal as the absolutely dominant component Other marine mammals were walrus and harbour porpoise which played an important but minor role Polar bear hunting was documented by the presence of four fragments from the youngest phase Saqqaq people were accompanied by fairly large and robust dogs Nipisat the first larger Saqqaq site to be excavated from the Open Water Area was a coastal site and through all occupation phases the game animals of the surrounding waters and fjords were hunted For more than a millennium the site was visited briefly from time to time at least during spring summer and early autumn Staging geese were captured during spring In June and July the breeding birds were exploited for their eggs and easily accessible young as documented by large numbers of juvenile gull bones in particular The common seal hunting specialised on immature individuals caught primarily during their first summer on the breeding grounds The inhabitants at Nipisat also hunted caribou on the mainland The age structure and sex distribution of the caribou remains primarily reflect stalking Selected body parts especially the fore and hind legs and the heads were transported to the island for raw material meat filleting and further processing for marrow extraction and fat rendering The exploitation of fauna through the entire occupation period was remarkably constant with respect to choice of game animal and the selected age groups Although eiders were more abundant in phase 1 36% than in phase 3 17% while gulls increased from 43 to 61% in the same time period The same trend was found valid for geese which increased over time while the importance of auks decreased Harbour porpoise seem to have decreased while walrus increased in relative importance through time Caribou seem to be of greater importance in phase 3 with 55% compared to 45% in phase 1 The slight shift in preferred resources may be explained by fluctuating abundance and availability of the game species combined with the development of new hunting tools Based on the new investigations in the Sisimiut District the gap between Saqqaq and Dorset Culture in Central West Greenland has been diminished Although resource exploitation at the site seems to have

been very stable through all three phases there are aspects of cultural change bridging the transition from Saqqaq to Dorset Cultures The introduction of bevelled tools sturdy harpoon or lance heads and the abandonment of the bow and arrow in phase 3 show cultural affiliation with Dorset technology This is also true in terms of lithic raw material preference the introduction of soapstone artefacts and the absence of dwelling structures with a well defined box hearth At the same time it looks like the central occupation area for the Saqqaq Culture shifted southwards from the Qeqertarsuup Tunua area towards Sisimiut and Nuuk

**Encyclopedia of the Arctic** Mark Nuttall, 2005-09-23 With detailed essays on the Arctic s environment wildlife climate history exploration resources economics politics indigenous cultures and languages conservation initiatives and more this Encyclopedia is the only major work and comprehensive reference on this vast complex changing and increasingly important part of the globe Including 305 maps This Encyclopedia is not only an interdisciplinary work of reference for all those involved in teaching or researching Arctic issues but a fascinating and comprehensive resource for residents of the Arctic and all those concerned with global environmental issues sustainability science and human interactions with the environment

**The Politics of Sustainability in the Arctic** Ulrik Pram Gad, Jeppe Strandbjerg, 2018-10-04 The Politics of Sustainability in the Arctic argues that sustainability is a political concept because it defines and shapes competing visions of the future In current Arctic affairs prominent stakeholders agree that development needs to be sustainable but there is no agreement over what it is that needs to be sustained In original conservationist discourse the environment was the sole referent object of sustainability however as sustainability discourses have expanded the concept has been linked to an increasing number of referent objects such as society economy culture and identity This book sets out a theoretical framework for understanding and analysing sustainability as a political concept and provides a comprehensive empirical investigation of Arctic sustainability discourses Presenting a range of case studies from Greenland Norway Canada Russia Iceland and Alaska the chapters in this volume analyse the concept of sustainability and how actors are employing and contesting this concept in specific regions within the Arctic In doing so the book demonstrates how sustainability is being given new meanings in the postcolonial Arctic and what the political implications are for postcoloniality nature and development more broadly Beyond those interested in the Arctic this book will also be of great value to students and scholars of sustainability sustainable development and identity and environmental politics

**The Law of the Sea and the Polar Regions** Erik J. Molenaar, Alex G. Oude Elferink, Donald R. Rothwell, 2013-08-15 The Law of the Sea and the Polar Regions Interactions between Global and Regional Regimes analyzes of the contemporary law of the sea and related areas of international law in Antarctica and the Arctic with a particular focus upon the interaction of global and regional regimes The global component of the international law of the sea principally the United Nations Convention on the Law of the Sea applies to the entire marine domain in both polar regions but explicitly requires regional implementation or acknowledges its usefulness This volume critically examines regional regimes for the Arctic and Antarctic on science

maritime security fisheries and shipping by means of common research questions thus enabling an overall synthesis and identification of trends differences and similarities

### **The Shaping of Greenland's Resource Spaces** Mark

Nuttall,2023-08-07 The book examines ideas about the making and shaping of Greenland s society environment and resource spaces It discusses how Greenland s resources have been extracted at different points in its history shows how acquiring knowledge of subsurface environments has been crucial for matters of securitisation and explores how the country is being imagined as an emerging frontier with vast mineral reserves The book delves into the history and contemporary practice of geological exploration and considers the politics and corporate activities that frame discussion about extractive industries and resource zones It touches upon resource policies the nature of social and environmental assessments and permitting processes while the environmental and social effects of extractive industries are considered alongside an assessment of the status of current and planned resource projects In its exploration of the nature and place of territory and the subterranean in political and economic narratives the book shows how the making of Greenland has and continues to be bound up with the shaping of resource spaces and with ambitions to extract resources from them Yet the book shows that plans for extractive industries remain controversial It concludes by considering the prospects for future development and debates on conservation and Indigenous rights with reflections on how and where Greenland is positioned in the geopolitics of environmental governance and geo security in the Arctic This book will be of great interest to students and scholars of environmental anthropology geography resource management extractive industries environmental governance international relations geopolitics Arctic studies and sustainable development

impede the first immigration of Inuit hunting tribes Norsemen from becoming Greenland Vikings and European explorers from searching for new trade routes and eventually reaching the North Pole Every single one of them read saw and understood the Greenlandic landscape differently while projecting their hopes and dreams onto new landscapes seascapes and icescapes As will become apparent similar hopes and dreams of the early settlers and explorers continue in postcolonial times in a different set of actors among them the U S military foreign investors and an Inuit run government *Indigenous Peoples' Governance of Land and Protected Territories in the Arctic* Thora Martina Herrmann, Thibault Martin, 2015-12-22 This book addresses critical questions and analyses key issues regarding Indigenous Aboriginal Peoples and governance of land and protected areas in the Arctic It brings together contributions from scientists indigenous and non indigenous researchers local leaders and members of the policy community that document Indigenous Aboriginal approaches to governance of land and protected areas at the local regional and international level explore new territorial governance models that are emerging as part of the Indigenous Aboriginal governance within Arctic States provinces territories and regions analyse the recognition or lack thereof concerning indigenous rights to self determination in the Arctic and examine how traditional decision making arrangements and practices can be linked with governments in the process of good governance The book highlights essential lessons learned success stories and remaining issues all of which are useful to address issues of Arctic governance of land and protected areas today and which could also be relevant for future governance arrangements The Role of Customary Law in Sustainable Development Peter Orebech, Fred Bosselman, Jes Bjarup, David Callies, Martin Chanock, Hanne Petersen, 2005 For many nations a key challenge is how to achieve sustainable development without a return to centralized planning Using case studies from Greenland Hawaii and northern Norway this 2006 book examines whether bottom up systems such as customary law can play a critical role in achieving viable systems for managing natural resources Customary law consists of underlying social norms that may become the acknowledged law of the land The key to determining whether a custom constitutes customary law is whether the public acts as if the observance of the custom is legally obligated While the use of customary law does not always produce sustainability the study of customary methods of resource management can produce valuable insights into methods of managing resources in a sustainable way *Coastal World Heritage Sites* Vanda Claudino-Sales, 2018-09-07 This book presents the natural environmental and scenic richness of the world s coastal and marine areas classified by UNESCO as Natural World Heritage Sites Representing well preserved areas of exceptional significance to the planet and to humankind they include a total of 49 marine sites formed by reefs atolls and gulfs and 35 coastal sites in all oceans and all continents with exception of Antarctica They are being protected and preserved from most degrading uses for future generations as an important legacy from the past Exploring their richness this book analyzes and explains these sites in a clear understandable scientific way and is of interest to all who work in or care about the geosciences environmental sciences and biosciences *This is Greenland* , 2000

Climate, Society and Subsurface Politics in Greenland Mark Nuttall, 2017-05-18 Once imagined as a place on the very edge of the world Greenland is now viewed as being at the epicentre of climate change At the same time international attention is focused on opportunities for oil and mineral development seemingly made possible as the inland ice melts and sea ice disappears revealing geological riches and making access to remote areas easier In this book Mark Nuttall takes the reader on a journey through landscapes seascapes and icescapes of memory movement and anticipation Unravelling the entanglements of climate change indigenous sovereignty and the politics surrounding non renewable resource extraction he describes how the country is on the verge of major environmental political and social transformations as it aspires to greater autonomy and possible independence from Denmark At the heart of this is discussion about how resources and the environment are given meaning and how they have become subject to intense political and ideological struggle **Climate Society and Subsurface Politics in Greenland Under the Great Ice** is a key resource for academics practitioners and students of anthropology geography development studies political ecology and polar studies

**Mining in the Nordic Countries** Petter Hojem, 2015-07-21 The last few years have seen a lot of activity within the Nordic mining industry New mines have opened but there have also been cases of bankruptcies Heightened activity has in turn led to discussions on the role of legislation and taxation in ensuring that mining contributes to sustainable development At the same time a number of voluntary sustainability initiatives have appeared For historic reasons the Nordic countries share a lot of similarities with regards to legislation And not least with regards to environmental laws the EU has contributed to further harmonisation even among the non member states Iceland and Norway Yet important differences exist Legal revisions are sometimes the result of much publicised problems so experiences in each country plays an important role An overview of taxation also indicates both similarities and differences
