Nature Technology And The Sacred:

Nature, Technology and the Sacred Bronislaw Szerszynski, 2008-04-15 This provocative and timely book argues that contemporary ideas and practices concerning nature and technology remain closely bound up with religious ways of thinking and acting Using examples from North America Europe and elsewhere it reinterprets a range of secular phenomena in terms of their conditioning by a complex series of transformations of the sacred in Western history The contemporary practices of environmental politics technological risk behaviour alternative medicine vegetarianism and ethical consumption take on new significance as sites of struggle between different sacral orderings Nature Technology and the Sacred introduces a radically new direction for today's critical discourse concerning nature and technology one that reinstates it as a moment within the ongoing religious history of the West

Evil in Modern Myth and Ritual Richard Stivers, 2020-04-28 Richard Stivers concern is with the social construction of evil that is with how modern societies in a partly unconscious way create evil as a category of the sacred and how symbols myths and rituals of evil are related to this He is interested moreover in how modern societies provoke individuals to commit evil actions This fascinating and stimulating book is the first attempt to work out in detail how the concepts of the sacred symbol myth and ritual form a cultural configuration in modern technological societies and not just in traditional societies

The Re-Enchantment of the West, Vol 2 Christopher Partridge, 2006-04-20 The Re Enchantment of the West challenges those theories that predict widespread secularization beyond traditional institutional religiosity Spiritualities are emerging that are not only quite different from the those forms of religion that are in decline but are often defined over against them and articulated and passed on in ways quite different from those of traditional religion In particular it is argued that such contemporary Western spirituality is fed by a constantly replenished reservoir of ideas practices and methodologies which is here termed occulture Moreover such occultural ideas both feed into and are resourced by popular culture Indeed popular occulture is a key feature of the re enchantment of the West Demonstrating the significance and ubiquity of these ideas this book examines for example healthcare and nursing contemporary environmentalism psychedelia and drug use the Internet and cyberspirituality belief in UFOs and extraterrestrial life demonology and the contemporary fascination with the figure of Satan the heavy metal

Philosophy of Technology Maarten Verkerk, Jan

Hoogland, Jan van der Stoep, Marc de Vries, 2015-09-16 Philosophy of Technology An introduction for technology and business students is an accessible guide to technology's changes their ubiquitousness and the many questions these raise Designed for those with no philosophical background in mind it is ideal for technology and engineering students or specialists who want to learn to think critically about how their work influences society and our daily lives The technological business environment and daily experiences are the starting point of the book and the authors reflect upon these practices from a philosophical point of view The text goes on to present a critical analysis of the subject including development manufacturing sales and marketing and the use of technological products and services The abstract ideas are made easier to grasp with a story telling approach a vivid history of the discipline and colourful portraits of the core thinkers in this domain as well as four case studies drawing from various engineering disciplines to demonstrate how philosophy can and should influence technology in practice The first comprehensive introduction to this vibrant young sub discipline in over 20 years this is an ideal textbook for students of technology and engineering beginning a course or project in the philosophy of their subject *The Oxford Handbook of Religion and Ecology* Roger S. Gottlieb, 2006-11-09 Ecologically oriented visions of God the Sacred the Earth and human beings The proposed handbook will serve as the definitive overview of these exciting new developments Divided into three main sections the books essays will reflect the three dominant dimensions of the field Part I will explore

Reordering Nature Celia Deane-Drummond, Bronislaw Szerszynski, Robin Grove-White, 2003-02-01 In this book experts in the environment theology and science argue that the challenge posed to society by biotechnology lies not only in terms of risk benefit analysis of individual genetic technologies and interventions but also has implications for the way we think about human identity and our relationship to the natural world Such a profound they would suggest religious challenge requires a response that is genuinely interdisciplinary in nature a conversation that draws as much on expertise in theology and philosophy as on the natural sciences and risk assessment techniques They argue that an adequate response must also be sociologically informed in at least two ways First it must draw on contemporary sociological insights about contemporary cultural change the complex role of expert knowledge in modern complex society and the specific social dynamics of contemporary technological risks Secondly it must endeavour to pay sensitive attention to the voice of the lay public in the current controversy over the new genetics This book attempts to realise such an aim as a contribution not just to academic scholarship but also to the public debate about biotechnology and its regulation Thus the collection includes contributions from scholars in a range of intellectual domains indeed many of the chapters themselves draw on more than one discipline in new and challenging ways The book invites the reader to enter into this conversation in a creative way and come to appreciate more fully the many sided nature of the debate Nature Technology Emile H. Ishida, Ryuzo

Furukawa, 2013-12-19 The Great East Japan Earthquake which occurred on March 11 2011 reminded us that we were just

one species within the great cycle of life on earth that we were allowed to survive only because of nature and that the idea that we were somehow able to conquer nature was simply an illusion Now more than ever it is time that we confront head on the change from the underground resources type of civilization to one with a new way of life and technology that embraces a sense of nature To do so we must learn from nature the only sustainable society on earth and create technology that embraces such a view of nature We call such technology which cleverly revives nature s greatness Nature Technology Taking a casual glance at nature a nest of termites in the savanna region can be observed to maintain a steady temperature of 30 C despite the fact that the outside air temperature ranges from 50 C during the day to nearly 0 C at night There are countless numbers of open pores just several billionths of a meter nanometer wide in the earth of the nest which serve to regulate the temperature and humidity In fact all kinds of earth have these pores clay mineral with aggregated structures and air conditioners that require no electricity have been created by hardening this earth while preserving its structure a cooling floor or wall becomes the alternative to a conventional air conditioner This book provides many such examples of how Nature Technology can support a new lifestyle that is both environmentally sound and spiritually uplifting Shaping an Inclusive Energy Transition Margot P. C. Weijnen, Zofia Lukszo, Samira Farahani, 2021-06-24 This open access book makes a case for a socially inclusive energy transition and illustrates how engineering and public policy professionals can contribute to shaping an inclusive energy transition building on a socio technical systems engineering approach Accomplishing a net zero greenhouse gas emissions economy in 2050 is a daunting challenge This book explores the challenges of the energy transition from the perspectives of technological innovation public policy social values and ethics It elaborates on two particular gaps in the design of public policy interventions focused on decarbonization of the energy system and discusses how both could be remedied First the siloed organization of public administration fails to account for the many interdependencies between the energy sector the mobility system digital infrastructure and the built environment Cross sector coordination of policies and policy instruments is needed to avoid potentially adverse effects upon society and the economy which may hamper the energy transition rather than accelerate it Second energy and climate policies pay insufficient attention to the social values at stake in the energy transition In addressing these gaps this book intends to inspire decision makers engaged in the energy transition to embrace the transition as an opportunity to bring a more inclusive society into being **Owen Barfield** Michael V. Di Fuccia, 2016-10-27 In this book Michael Di Fuccia examines the theological import of Owen Barfield s poetic philosophy He argues that philosophies of immanence fail to account for creativity as is evident in the false shuttling between modernity s active construal and postmodernity s passive construal of subjectivity In both extremes subjectivity actually dissolves divesting one of any creative integrity Di Fuccia shows how in Barfield s scheme the creative subject appears instead to inhabit a middle or medial realm which upholds one s creative integrity It is in this way that Barfield s poetic philosophy gestures toward a theological vision of poesis proper wherein

creativity is envisaged as neither purely passive nor purely active but middle Creativity thus is not immanent but mediated a participation in God's primordial poesis *Nature, Technology, and Society* Victor Ferkiss, 1994-11 Traces cultural attitudes toward the environment and technology across the span of human civilization While all human societies have enlisted technologies to control nature the last hundred years have witnessed the technological exploitation and destruction of natural resources on an unprecedented scale As environmental groups and the scientific community sound the alarm about deforestation global warming and ozone depletion the obvious question arises how did we get where we are today In *Nature Technology and Society* Victor Ferkiss sets out to answer this central question arguing that we cannot escape from our present environmental predicament unless we understand the ideas which have created it Ferkiss asks the basic questions concerning humans and their relationship to the environment He traces cultural attitudes towards the environment from early mankind to the present day This fascinating book is distinctive both in its comprehensiveness and in its attempt to place side by side influential thinkers and movements with varied views on these issues **Devoted to Nature** Evan

Berry, 2015-07-21 *Devoted to Nature* explores the religious underpinnings of American environmentalism tracing the theological character of American environmental thought from its Romantic foundations to contemporary nature spirituality During the Gilded Age and the Progressive Era religious sources were central to the formation of the American environmental imagination shaping ideas about the natural world establishing practices of engagement with environments and landscapes and generating new modes of social and political interaction Building on the work of seminal environmental historians who acknowledge the environmental movement's religious roots Evan Berry offers a potent theoretical corrective to the narrative that explained the presence of religious elements in the movement well into the twentieth century In particular Berry argues that an explicitly Christian understanding of salvation underlies the movement's orientation toward the natural world Theologically derived concepts of salvation redemption and spiritual progress have not only provided the basic context for Americans' passion for nature but have also established the horizons of possibility within the national environmental imagination *Nature, Technology and Cultural Change in Twentieth-Century German Literature* A.

New Romantic Cyborgs Mark Coeckelbergh, 2017-02-24 An account of the complex relationship between technology and romanticism that links nineteenth century monsters automata and mesmerism with twenty first century technology s magic devices and romantic cyborgs Romanticism and technology are

widely assumed to be opposed to each other Romanticism understood as a reaction against rationalism and objectivity is perhaps the last thing users and developers of information and communication technology ICT think about when they engage with computer programs and electronic devices And yet as Mark Coeckelbergh argues in this book this way of thinking about technology is itself shaped by romanticism and obscures a better and deeper understanding of our relationship to technology Coeckelbergh describes the complex relationship between technology and romanticism that links nineteenth century monsters automata and mesmerism with twenty first century technology s magic devices and romantic cyborgs Coeckelbergh argues that current uses of ICT can be interpreted as attempting a marriage of Enlightenment rationalism and romanticism He describes the romantic dialectic when this new kind of material romanticism particularly in the form of the cyborg as romantic figure seems to turn into its opposite He shows that both material romanticism and the objections to it are still part of modern thinking and part of the romantic dialectic Reflecting on what he calls the end of the machine Coeckelbergh argues that to achieve a more profound critique of contemporary technologies and culture we need to explore not only different ways of thinking but also different technologies and that to accomplish the former we require the latter
