Federal Register ,1998-08 *Sedimentary Basins* Gerhard Einsele,2013-06-29 The modern geological sciences are

characterized by extraordinarily rapid progress as well as by the development and application of numerous new and refined methods most of them handling an enormous amount of data available from all the continents and oceans. Given this state of affairs it seems inevitable that many students and professionals tend to become experts in relatively narrow fields and thereby are in danger of losing a broad view of current knowledge. The abundance of new books and symposium volumes testifies to this trend toward specialization. However many geologic processes are complex and result from the interaction of many seemingly unrelated individual factors. This signifies that we still need generalists who have the broad overview and are able to evaluate the great variety of factors and processes controlling a geologic system such as a sedimentary basin. In addition this also means that cooperation with other disciplines in the natural sciences and engineering is increasingly important. Modern text books providing this broad overview of the earth sciences are rare.
