Opioid Dependence:

Opioid Dependence Abraham Wikler, 2013-06-29 A major problem in the treatment of opioid dependence has been the persistence of relapse despite detoxification and enforced prolonged abstinence from drug use with or without conventional psychotherapy and other efforts at rehabilitation Both initial addiction and subsequent relapses are usually ascribed to the quest for opioid produced euphoria in persons with character disorders This formulation is in accord with one half of the common sense pleasure pain principle but it ignores the other half namely the long lasting dysphoric consequences of repeated opioid use distressing abstinence phenomena sexual disturbances disruption of marital status unemployment enmeshment in criminal activities arrests and imprisonment In any case the pleasure pain principle is an empty tautology since it is incapable of refutation by any conceivable objective data that might seem contradictory inasmuch as it can be saved by invocation of untestable unconscious intervening variables Less tied to the pleasure pain principle is the view that relapse is due to long lasting sequelae of previous opioid addiction resulting from complex conditioning processes both operant and classical involving pharmacological environmental social and personal variables In this view relapse is not simply a re enactment of initial opioid use but is a disease sui generis a disease of its own kind The factors contributing to this disease sui generis are reviewed in this book
