LOOKING AT INNOVATION: TWO APPROACHES TO EDUCATIONAL RESEARCH

P. Sheldrake and S. Berry

(N.F.E.R. Publishing Co. Ltd., 1975)

ROY WILKIE, *Strathclyde University*

There are at least three good reasons for reading this book. It is the first major report of research carried out by the Anabaz Project, part of the Nuffield Foundation's Group for Research and Innovation in Higher Education. Here are two case studies of the introduction of new courses into traditional vocational disciplines: behavioural sciences introduced into the third year of the curriculum of the Edinburgh Medical School and a 'background' course for second-year students in the Department of Electronic and Electric Engineering at Birmingham.

As there seems to be a trend in British universities and polytechnics towards developing such "broadening" courses, the authors' findings are important:

"... two important criteria which the students applied emerge. In the first case, a background course might be acceptable if it could be shown to have relevance to the rest of the student's studies in the department, or his work when he left. Alternatively, students wanted courses that fitted their wider interests. This second criteria implied that students required greater freedom to choose subjects and, more important, that the courses be taught with the same expertise as the rest of their courses in the Department. In addition, there was also a vague call for relevance to the 'outside world' " (pp. 112-3)

"... the fate of 'background' courses is not just a matter of context and orientation, important though this is, but also is subject to the more general interests of the students and staff, and even their maturity and identification with the professional" (p. 127)

Secondly, this report should also be read by organization theorists concerned both with problems of change and with understanding the university as an organization. The authors point out that as well as questions of academic content and philosophy involved in the case studies, there was "a consideration of university politics and university finance". The analogy of political negotiation over conquered territory used to illuminate the behaviour of the working party at Edinburgh demonstrates that this consideration was a realistic one.

Thirdly, the research itself has methodological interest. The Edinburgh researcher deliberately intervened in the situation, the Birmingham one acted the more traditional role of trying to have little impact on the course and its development. The problems of involvement and detachment, prescription and analysis are raised here in their behaviour and their understanding that "there is no simple version of reality". It is a pity that only seven pages of a postscript relate to this fundamental issue. All in all, a stimulating little book.

Additionally, the book covers various research types and designs, including experimental, survey, correlational, narrative, action research and mixed methods designs. Ensuring readers are well equipped to choose the most appropriate methodology for their research needs leads to more robust and impactful studies in their respective fields.

Educational Research and Innovation Inspired by Technology, Driven by Pedagogy: A Systemic Approach to Technology-Based School Innovations OECD, 2010-10-04. This report highlights key issues to facilitate understanding of how a systemic approach to technology-based school innovations can contribute to quality education for all while promoting a more equal and effective education system.

Resources in Education, 1996-04. Understanding and Evaluating Qualitative Educational Research Marilyn Lichtman, 2011. When learning how to read, analyze and design one's own research, it is useful to review examples of similar research. *Understanding and Evaluating Qualitative Educational Research* uses published research articles to teach students how to understand and evaluate qualitative research in education. Each example within a category of qualitative research (ethnography, grounded theory, phenomenology, case study, action research, narrative and mixed methods) is accompanied by commentary from the editor regarding why the particular approach was used and how and why the various aspects of the example relate back to the approach taken. This commentary guides students in learning how to read, analyze and create their own qualitative research studies. Included in the text is a series of Issues and Concepts that are at the forefront of the changing field. This text gives students in qualitative educational research a well-rounded and practical look at what qualitative research is, along with how to read, analyze and design studies themselves.

Enhancing the Value of Teacher Education Research, 2024-01-22. This book invites us to critically reflect on the value of research in and for teacher education. It explores the nature and role of teacher education research and identifies ways to enhance its value for policy and practice. It gathers together studies that deploy a wide range of methodologies, including small-scale practitioner-focused research and large-scale empirical studies, considering the value of both approaches for the development of teacher education research that is meaningful for practice but also valid and relevant for policy. The studies collected in this book were undertaken in different countries and put forward powerful messages for teacher education research in the 21st century. The ultimate objective is to contribute to the generation of a knowledge base for teacher education, identifying strategies and acknowledging challenges. The various arguments presented here can be utilised by teacher education policymakers, practitioners and researchers wishing to enhance the role of teacher education research in their own countries and contexts.
