Man Who Found The Missing Link The The Extraordinary Life Of Eugene Dubois:

The Man who Found the Missing Link Pat Shipman, 2002 **The Man who Found the Missing Link** Pat Shipman, 2001 Pat Shipman's latest book is a scientific biography written like a novel. It tells the story of one of the greatest scientists at the turn of the century, a Dutchman called Eugene Dubois, now largely forgotten, but the man whose discovery of the missing link altered our view of human origins. Through force of personality, intellect, and luck, Dubois pulled off one of the most amazing scientific coups of all time. As a young man, he decided that the most important contribution a man could make to science would be to find the missing link, the extinct form that exemplifies the evolutionary connection between humans and apes. It would be the proof of Darwinian evolution, then still controversial. He deduced where the missing link should be and found the fossil, now known as *Homo erectus*, in Java in 1891. Shipman uses a fascinating range of letters, diaries, and photographs from Dubois' personal collection, friends, and enemies to create a story-driven account of how Dubois' life and career exploded across the world in the 1890s. This man's passion and scientific genius engulfed him, and his friends' lives in a chain reaction of inspiration and betrayal that orbited around his precious fossils for forty years. **The Man who Found the Missing Link** Pat Shipman, 2002 Born eighteen months after the first Neanderthal skeleton was found and a year before Charles Darwin published *The Origin of Species*, Eugene Dubois vowed to discover a powerful truth in Darwin's deceptively simple ideas. There is a link, he declared, as yet unknown between apes and Man. It takes a brilliant writer to elucidate a brilliant mind, and Pat Shipman shines as never before. **The Man Who Found the Missing Link** is an irresistible tale of adventure, scientific daring, and a strange and enduring love, and it is true. **Strickberger's Evolution** Brian Hall, Benedikt Hallgrímsson, 2008 Thoroughly updated and reorganized, Strickberger's *Evolution*, Fourth Edition, presents biology students with a basic introduction to prevailing knowledge and ideas about evolution, discussing how, why, and where the world and its organisms changed throughout history. Keeping consistent with Strickberger's engaging writing style, the authors carefully unfold a broad range of philosophical and historical topics that frame the theories of today, including cosmological and geological evolution and its impact on life, the origins of life on earth, the development of molecular pathways from genetic systems to organismic morphology and function, the evolutionary history of organisms from microbes to animals, and the numerous molecular and populational concepts that explain the earth's dynamic evolution. **Quaternary Palaeontology and Archaeology of Sumatra** Julien Louys, Paul C.H. Albers, Alexandra A.E. van der Geer, 2024-04-04 The Indonesian island of Sumatra is part of a chain of islands making up Sunda and the Malay Archipelago. Sumatra is one of the largest islands in the world, housing unique and globally important tropical rainforests, a diverse array of rare plants and magnificent animals, and a population of 60 million who speak a range of Austronesian languages. As beautifully exemplified in this volume, Sumatra is a place which preserves a distinct and long-term human history, studies of which began in earnest with Eugene Dubois's explorations in the 1880s to find our ancestral missing link. Archaeological investigation of megaliths and historic

empires carry on to this day A range of topics are explored here including palaeontological study of fossil mammals and their environments the routes that Homo erectus took during their wanderings across Indonesia and the growth and development of societies and empires in more recent periods This exemplary volume presents a revised view of the history of palaeontological and archaeological research as well as new ground breaking field research laying the foundation for future research on the biological and cultural evolution of one of the most majestic islands of the world Professor Michael Petraglia Director of the Australian Research Centre for Human Evolution Griffith University The Palaeolithic Settlement of Asia Robin Dennell,2008-12-15 This book provides the first analysis and synthesis of the evidence of the earliest inhabitants of Asia before the appearance of modern humans 100 000 years ago Asia has received far less attention than Africa and Europe in the search for human origins but is no longer considered of marginal importance Indeed a global understanding of human origins cannot be properly understood without a detailed consideration of the largest continent In this study Robin Dennell examines a variety of sources including the archaeological evidence the fossil hominin record and the environmental and climatic background from Southwest Central South and Southeast Asia as well as China He presents an authoritative and comprehensive framework for investigations of Asia s oldest societies challenges many long standing assumptions about its earliest inhabitants and places Asia centrally in the discussions of human evolution in the past two million years

Milestones in Archaeology Tim Murray,2007-04-13 This engaging work uses key discoveries events people techniques and controversies to give the general reader a rich history of archaeology from its beginnings in the 16th century to the present The history of archaeology leads from the musty collections of dilettante antiquarians to high tech science The book identifies three major developmental periods Birth of Archaeology 16th 18th centuries Archaeology of Origins and Empires 19th century and World Archaeology 20th century An introductory essay acquaints the reader with the essence of the science for each period The short entries comprising the balance of the book expand on the themes introduced in the essays Organized around personalities techniques controversies and conflicts the encyclopedia brings to life the history of archaeology It broadens the general reader s knowledge by detailing the professional significance of widely known discoveries while introducing to wider knowledge obscure but important moments in archaeology Archaeology is replete with the visionaries and swashbucklers of popular myth it is also filled with careful and dedicated scientists An Ape's view of Human Evolution Peter Andrews,2015 This book brings together ecology evolution genetics anatomy and geology to provide a new perspective on human evolution from the apes viewpoint Dissent with Modification: Human Origins, Palaeolithic Archaeology and Evolutionary Anthropology in Britain 1859-1901 John McNabb,2012-04-21 The major themes of this study include the development of Palaeolithic archaeology its relationship with the study of human physical anthropology in Britain and to a lesser extent on the Continent links between these and the study of race and racial origins links with geological developments in climate and glacial studies *The World Before Us* Tom Higham,2021-08-24 A fascinating investigation of

the origin of humans based on incredible new discoveries and advanced scientific technology Fifty thousand years ago Homo sapiens was not the only species of humans in the world There were also Neanderthals in what is now Europe the Near East and parts of Eurasia Hobbbits H floresiensis on the island of Flores in Indonesia Denisovans in Siberia and eastern Eurasia and H luzonensis in the Philippines Tom Higham investigates what we know about these other human species and explores what can be learned from the genetic links between them and us He also looks at whether H erectus may have survived into the period when our ancestors first moved into Southeast Asia Filled with thrilling tales of recent scientific discoveries this book offers an engaging synopsis of our current understanding of human origins and raises new and interesting possibilities particularly concerning what contact if any these other species might have had with us prior to their extinction The Story of the Human Body Daniel E. Lieberman,2014-07-01 A landmark book of popular science that gives us a lucid and engaging account of how the human body evolved over millions of years with charts and line drawings throughout Fascinating A readable introduction to the whole field and great on the making of our physicality Nature In this book Daniel E Lieberman illuminates the major transformations that contributed to key adaptations to the body the rise of bipedalism the shift to a non fruit based diet the advent of hunting and gathering and how cultural changes like the Agricultural and Industrial Revolutions have impacted us physically He shows how the increasing disparity between the jumble of adaptations in our Stone Age bodies and advancements in the modern world is occasioning a paradox greater longevity but increased chronic disease And finally provocatively he advocates the use of evolutionary information to help nudge push and sometimes even compel us to create a more salubrious environment and pursue better lifestyles From Distant Tales Dominik Bonatz,John Miksic,J. David Neidel,2009-03-26 This is the most comprehensive book devoted to Sumatra in more than half a century It summarizes earlier studies and provides a huge amount of new knowledge for the first time in readily accessible form Sumatra is one of the world s largest islands rich in flora and fauna minerals and timber and located at the midpoint of the maritime route between China and India These are ideal conditions for the creation of a fascinating history Sumatra has played a major role in world trade for 2 000 years but its culture and archaeology have been surprisingly neglected This volume sets out to remedy this defect With chapters on history archaeology anthropology folklore and religion the authors focus particular attention on the relations between the coastal peoples who are best known to outsiders and the hinterlands where most of the important resources lie The list of authors includes most of the principal living authorities on Sumatra Their cumulative experience consists of many years on all parts of the island The book is copiously illustrated and includes a comprehensive bibliography for those who wish to pursue further study of the wide range of topics covered The Crucible of Language Vyvyan Evans,2015-02-16 From the barbed childish taunt on the school playground to the eloquent sophistry of a lawyer prising open a legal loophole in a court of law meaning arises each time we use language to communicate with one another How we use language to convey ideas make requests ask a favour and express anger love or dismay is of the utmost

importance indeed linguistic meaning can be a matter of life and death In *The Crucible of Language* Vyvyan Evans explains what we know and what we do when we communicate using language he shows how linguistic meaning arises where it comes from and the way language enables us to convey the meanings that can move us to tears bore us to death or make us dizzy with delight Meaning is he argues one of the final frontiers in the mapping of the human mind **Through Eugène**

Dubois' Eyes Paulinus Cornelis Hendricus Albers, John De Vos, 2010 Eugène Dubois the man who found the missing link between apes and humans intended to write a book about his finds in Indonesia He never finished it In this current volume the outlines of Dubois book are reconstructed Recently discovered correspondence with his intended publisher shed new light on the troublesome character of Dubois and his inability to communicate with the scientific establishment This volume also discloses the vast amount of photographic material that is part of the Dubois Collection at Naturalis the National Museum of Natural History in Leiden the Netherlands As Pat Shipman summarizes it in her preface what this book offers it is more more images more letters more details more insight into the workings of a brilliant but unquestionably difficult man of science We shall not see Dubois like again so it is doubly fortunate that Albers and de Vos have uncovered so much about his life

Handbook of East and Southeast Asian Archaeology Junko Habu, Peter V. Lape, John W. Olsen, 2017-12-08 The Handbook of East and Southeast Asian Archaeology focuses on the material culture and lifeways of the peoples of prehistoric and early historic East and Southeast Asia their origins behavior and identities as well as their biological linguistic and cultural differences and commonalities Emphasis is placed upon the interpretation of material culture to illuminate and explain social processes and relationships as well as behavior technology patterns and mechanisms of long term change and chronology in addition to the intellectual history of archaeology as a discipline in this diverse region The Handbook augments archaeologically focused chapters contributed by regional scholars by providing histories of research and intellectual traditions and by maintaining a broadly comparative perspective Archaeologically derived data are emphasized with text based documentary information provided to complement interpretations of material culture The Handbook is not restricted to art historical or purely descriptive perspectives its geographical coverage includes the modern nation states of China Mongolia Far Eastern Russia North and South Korea Japan Taiwan Vietnam Cambodia Laos Thailand Burma Malaysia Indonesia the Philippines and East Timor

Imagining the Darwinian Revolution Ian Hesketh, 2022-06-14 This volume considers the relationship between the development of evolution and its historical representations by focusing on the so called Darwinian Revolution The very idea of the Darwinian Revolution is a historical construct devised to help explain the changing scientific and cultural landscape that was ushered in by Charles Darwin's singular contribution to natural science And yet since at least the 1980s science historians have moved away from traditional great man narratives to focus on the collective role that previously neglected figures have played in formative debates of evolutionary theory Darwin they argue was not the driving force behind the popularization of evolution in the nineteenth century This volume moves the

conversation forward by bringing Darwin back into the frame recognizing that while he was not the only important evolutionist his name and image came to signify evolution itself both in the popular imagination as well as in the work and writings of other evolutionists Together contributors explore how the history of evolution has been interpreted deployed and exploited to fashion the science behind our changing understandings of evolution from the nineteenth century to the present

Eugène Dubois and the Ape-Man from Java L.T. Theunissen,2012-12-06 Although the name Pithecanthropus is now seldom used there are few who study the origin of our species who will fail to recognise the historical place of the usage and its association with Eugene Dubois During the last thirty or forty years Australopithecus and its African context has tended to draw attention from the early work on our origins in Java It is now increasingly common to hear the term pithecanthropine used only to indicate the Asian or Far Eastern examples of Homo erectus which although probably derived from African ancestry have some features that in the opinion of some experts may justify their being considered distinctive This discussion is not within the pages that follow which deal extensively with the work of Eugene Dubois He was an extraordinary man who did as much as any person since to put the great antiquity of our ancestors firmly in the public domain Dubois became involved with the study of human origins from a medical and anatomical background as have many since The jealousies and professional pressures that we think of as a phenomenon of the post war years were clearly a major factor in deciding the future of his career

We, Hominids Frank Westerman,2022-05-12 The Dutch bestseller Nominated for Le Prix Nicolas Bouvier A masterclass in storytelling exploring who we are and where we came from Danielle Clode Gripping and brilliantly told We Hominids deftly blends personal experience with a journalist s eye for a remarkable story Mark McKenna WHO ARE WE WHY ARE WE DIFFERENT FROM ANIMALS WHAT MAKES US HUMAN In this charming thought provoking book one of Holland s greatest non fiction writers hunts down answers to humanity s most fundamental questions Who are we What makes us different from animals With an ancient skull as his starting point he travels the globe tracing the search for the first human being the missing link between humans and apes Westerman introduces us to the world of skull hunters leading experts in our fossil ancestry whose lives are just as fascinating as those of their primeval discoveries He astutely reconsiders the work of illustrious paleoanthropologists in the light of new DNA technology postcolonialism and the rise of women in this male dominated field Westerman discovers a plethora of origin hypotheses and shows how any theory of who we are and where we come from is coloured by the zeitgeist We Hominids is a compelling mixture of reportage travelogue and essay reminiscent of Bruce Chatwin or Ryszard Kapuscinski written by a brilliant storyteller and thinker

Finding Time for the Old Stone Age Anne O'Connor,2007-08-16 Finding Time for the Old Stone Age explores a century of colourful debate over the age of our earliest ancestors In the mid nineteenth century curious stone implements were found alongside the bones of extinct animals Humans were evidently more ancient than had been supposed but just how old were they There were several clocks for Stone Age or Palaeolithic time and it would prove difficult to synchronize them Conflicting timescales were drawn

from the fields of geology palaeontology anthropology and archaeology Anne O Connor draws on a wealth of lively personal correspondence to explain the nature of these arguments The trail leads from Britain to Continental Europe Africa and Asia and extends beyond the world of professors museum keepers and officers of the Geological Survey wine sellers diamond merchants papermakers and clerks also proposed timescales for the Palaeolithic This book brings their stories to light for the first time stories that offer an intriguing insight into how knowledge was built up about the ancient British past
