Management Of Tritium At Nuclear Facilities Technical Reports Series International Atomic Energy Agency:

Management of Tritium at Nuclear Facilities International Atomic Energy Agency, 1984 **International Control of Tritium for Nuclear Nonproliferation and Disarmament** Martin B. Kalinowski, 2004-03-29 Tritium is used by all nuclear weapons states to increase the explosive yield of atomic bombs and to miniaturize them However this radioactive material has not yet been put under appropriate international control comparable to the nuclear safeguards applied for plutonium and uranium It is a neglected material in efforts to control the spread and Technical Reports Series ,2004 Experience in the Management of Radioactive Waste After Nuclear Accidents: A Basis for Preplanning IAEA, 2022-11-22 Major accidents at a nuclear power plant or fuel cycle facility are rare but can produce large quantities of radioactive waste with widely varying characteristics that can be difficult to manage Large volumes of radioactive waste can also be generated by accidents at military installations or by the mishandling high activity sealed radiation sources In the case of a major accident radioactive waste volumes may quickly overwhelm existing national management and disposal infrastructure Appropriate disposal facilities might not be available to match the amounts or characteristics of the wastes This publication is developed to support Member States efforts towards improved preparedness related to the management of radioactive waste in the event of a nuclear or radiological accident It builds on experiences gained following historic accidents to develop lessons learned which planners in governmental agencies and nuclear facilities are encouraged to consider in preplanning activities

Management of Abnormal Radioactive Wastes at Nuclear Power Plants International Atomic Energy Agency, 1989 This report discusses the management of abnormal wastes at nuclear facilities It is intended to give guidance to nuclear power plant operators on the technical means available to enable abnormal wastes to be managed safely and to provide assistance in the selection of appropriate technologies and processes that can be used for abnormal situations In addition subjects such as pre planning and provisions for abnormal waste management decision making on the management of abnormal wastes and adequate waste characterization are also discussed **Handbook of Membrane Separations** Anil K. Pabby, Syed S.H. their attendant risks as well as on the analysis of costs of clean up and waste management This allows for decommissioning either soon after permanent shutdown or perhaps a long time later the latter course allowing for radioactivity levels to drop in any activated or contaminated components It is crucial for clear processes and best practices to be applied in decommissioning such installations and sites particular where any significant health and environmental risks exist This book critically reviews the nuclear decommissioning processes and technologies applicable to nuclear power plants and other civilian nuclear facilities Part one focuses on the fundamental planning issues in starting a nuclear decommissioning process from principles and safety regulations to financing and project management Part two covers the execution phase of nuclear decommissioning projects detailing processes and technologies such as dismantling decontamination and radioactive waste management as well as environmental remediation site clearance and reuse Finally part three details international experience in the decommissioning of nuclear applications including the main nuclear reactor types and nuclear fuel cycle facilities as well as small nuclear facilities and legacy nuclear waste sites Critically reviews nuclear decommissioning processes and technologies applicable to nuclear power plants and other civilian nuclear facilities Discusses the fundamental planning issues in starting a nuclear decommissioning process Considers the execution phase of nuclear decommissioning projects including dismantling decontamination and radioactive waste management as well as environmental remediation site clearance and reuse *Three Mile Island, Radioactive Waste Disposal Resulting from Mar.1979 Accident, Unit 2* ,1981
