N-Dimensional Quasiconformal (QCf) Mappings Petru Caraman,1974 *n-dimensional quasi-conformal QCf mappings (Homeomorfisme cvasiconforme n-dimensionale, engl.- Rev., enl. and transl. from the Romanian by the author.)* Petru Caraman,1974 n-dimensional quasiconformal (qcf) mappings Petru Caraman,1974 *Quasiconformal Space Mappings* Matti Vuorinen,2006-11-14 This volume is a collection of surveys on function theory in euclidean n dimensional spaces centered around the theme of quasiconformal space mappings These surveys cover or are related to several topics including inequalities for conformal invariants and extremal length distortion theorems L p theory of quasiconformal maps nonlinear potential theory variational calculus value distribution theory of quasiregular maps topological properties of discrete open mappings the action of quasiconformal maps in special classes of domains and global injectivity theorems The present volume is the first collection of surveys on Quasiconformal Space Mappings since the origin of the theory in 1960 and this collection provides in compact form access to a wide spectrum of recent results due to well known specialists CONTENTS G D Anderson M K Vamanamurthy M Vuorinen Conformal invariants quasiconformal maps and special functions F W Gehring Topics in quasiconformal mappings T Iwaniec L p theory of quasiregular mappings O Martio Partial differential equations and quasiregular mappings Yu G Reshetnyak On functional classes invariant relative to homothetics S Rickman Picard s theorem and defect relation for quasiconformal mappings U Srebro Topological properties of quasiregular mappings J V is l Domains and maps V A Zorich The global homeomorphism theorem for space quasiconformal mappings its development and related open problems Encyclopaedia of Mathematics Michiel Hazewinkel,2012-12-06 This ENCYCLOPAEDIA OF MA THEMA TICS aims to be a reference work for all parts of mathe matics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivi sion has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science en gineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques *Harmonic Quasiconformal Mappings and Hyperbolic Type Metrics* Vesna Todorčević,2019-07-24 The book presents a

research area in geometric function theory concerned with harmonic quasiconformal mappings and hyperbolic type metrics defined on planar and multidimensional domains The classes of quasiconformal and quasiregular mappings are well established areas of study in this field as these classes are natural and fruitful generalizations of the class of analytic functions in the planar case The book contains many concrete examples as well as detailed proofs and explanations of motivations behind given results gradually bringing the reader to the forefront of current research in the area This monograph was written for a wide readership from graduate students of mathematical analysis to researchers working in this or related areas of mathematics who want to learn the tools or work on open problems listed in various parts of the book

Conformal Geometry and Quasiregular Mappings Matti Vuorinen,2006-11-15 This book is an introduction to the theory of spatial quasiregular mappings intended for the uninitiated reader At the same time the book also addresses specialists in classical analysis and in particular geometric function theory The text leads the reader to the frontier of current research and covers some most recent developments in the subject previously scatterd through the literature A major role in this monograph is played by certain conformal invariants which are solutions of extremal problems related to extremal lengths of curve families These invariants are then applied to prove sharp distortion theorems for quasiregular mappings One of these extremal problems of conformal geometry generalizes a classical two dimensional problem of O Teichm ller The novel feature of the exposition is the way in which conformal invariants are applied and the sharp results obtained should be of considerable interest even in the two dimensional particular case This book combines the features of a textbook and of a research monograph it is the first introduction to the subject available in English contains nearly a hundred exercises a survey of the subject as well as an extensive bibliography and finally a list of open problems   Complex Analysis and Dynamical Systems IV Mark L'vovich Agranovskiĭ,2011 The papers in this volume cover a wide variety of topics in the geometric theory of functions of one and several complex variables including univalent functions conformal and quasiconformal mappings and dynamics in infinite dimensional spaces In addition there are several articles dealing with various aspects of Lie groups control theory and optimization Taken together the articles provide the reader with a panorama of activity in complex analysis and quasiconformal mappings drawn by a number of leading figures in the field The companion volume Contemporary Mathematics Volume 554 is devoted to general relativity geometry and PDE

Handbook of Complex Analysis Reiner Kuhnau,2004-12-09 Geometric Function Theory is that part of Complex Analysis which covers the theory of conformal and quasiconformal mappings Beginning with the classical Riemann mapping theorem there is a lot of existence theorems for canonical conformal mappings On the other side there is an extensive theory of qualitative properties of conformal and quasiconformal mappings concerning mainly a prior estimates so called distortion theorems including the Bieberbach conjecture with the proof of the Branges Here a starting point was the classical Scharz lemma and then Koebe s distortion theorem There are several connections to mathematical physics because of the relations

to potential theory in the plane The Handbook of Geometric Function Theory contains also an article about constructive methods and further a Bibliography including applications eg to electroxtatic problems heat conduction potential flows in the plane A collection of independent survey articles in the field of GeometricFunction Theory Existence theorems and qualitative properties of conformal and quasiconformal mappings A bibliography including many hints to applications in electrostatics heat conduction potential flows in the plane   Combinatorial Image Analysis Ralf Reulke,2006-06-09 This volume constitutes the refereed proceedings of the 11th International Workshop on Combinatorial Image Analysis IWCIA 2006 held in Berlin June 2006 The book presents 34 revised full papers together with two invited papers covering topics including combinatorial image analysis grammars and models for analysis and recognition of scenes and images combinatorial topology and geometry for images digital geometry of curves and surfaces algebraic approaches to image processing and more   **Computer Vision Approaches to Medical Image Analysis** Reinhard R. Beichel,Milan Sonka,2006-10-20 This book constitutes the thoroughly refereed post proceedings of the international workshop Computer Vision Approaches to Medical Image Analysis CVAMIA 2006 held in Graz Austria in May 2006 as a satellite event of the 9th European Conference on Computer Vision EECV 2006 The 10 revised full papers and 11 revised poster papers presented together with one invited talk were carefully reviewed and selected from 38 submissions   **Mathematical Constants** Steven R. Finch,2003-08-18 Steven Finch provides 136 essays each devoted to a mathematical constant or a class of constants from the well known to the highly exotic This book is helpful both to readers seeking information about a specific constant and to readers who desire a panoramic view of all constants coming from a particular field for example combinatorial enumeration or geometric optimization Unsolved problems appear virtually everywhere as well This work represents an outstanding scholarly attempt to bring together all significant mathematical constants in one place   *Romanian-Finnish Seminar on Complex Analysis* C. Andreian Cazacu,A. Cornea,M. Jurchescu,I. Suciu,2006-11-14   **The Geometric Vein** C. Davis,B. Grünbaum,F.A. Sherk,2012-12-06 Geometry has been defined as that part of mathematics which makes appeal to the sense of sight but this definition is thrown in doubt by the existence of great geometers who were blind or nearly so such as Leonhard Euler Sometimes it seems that geometric methods in analysis so called consist in having recourse to notions outside those apparently relevant so that geometry must be the joining of unlike strands but then what shall we say of the importance of axiomatic programmes in geometry where reference to notions outside a restricted reper tory is banned Whatever its definition geometry clearly has been more than the sum of its results more than the consequences of some few axiom sets It has been a major current in mathematics with a distinctive approach and a distinc ti v e spirit A current furthermore which has not been constant In the 1930s after a period of pervasive prominence it appeared to be in decline even passe These same years were those in which H S M Coxeter was beginning his scientific work Undeterred by the unfashionability of geometry Coxeter pursued it with devotion and inspiration By the 1950s he appeared to the broader mathematical world as a

consummate practitioner of a peculiar out of the way art Today there is no longer anything that out of the way about it Coxeter has contributed to exemplified we could almost say presided over an unanticipated and dra matic revival of geometry

Discrete Groups in Space and Uniformization Problems B. Apanasov,1991-06-30 A revised and substantially enlarged edition of the Russian book Discrete transformation groups and manifold structures published by Nauka in 1983 this volume presents a comprehensive treatment of the geometric theory of discrete groups and the associated tessellations of the underlying space Also dealt with in depth are geometric and conformal structures on manifolds with particular emphasis on hyperbolic n dimensional manifolds A detailed account of the geometric and analytic properties of geometrically finite Mobius groups in n dimensional space is given and this forms the basis of the subsequent analysis Emphasis is placed on the geometrical aspects and on the universal constraints which must be satisfied by all tessellations and structures on manifolds Annotation copyrighted by Book News Inc Portland OR   *IUMJ.* Indiana University.
