sides to choosing names the topics are intriguingly nonstandard First rate John Allen Paulos author of *Innumeracy* A science and technology journalist and essayist whose work has appeared in multiple anthologies Brian Hayes now presents a selection of his most memorable pieces including the National Magazine Award winning *Clock of Ages* in this enjoyable volume In addition Hayes embellishes the collection with an overall scene setting preface reconfigured illustrations and a refreshingly self critical Afterthoughts section appended to each essay You don t have to be a geek to appreciate Hayes s lively self effacing style The first essay explains how clockmakers developed the gears and linkages that enabled fabled medieval clocks to reach remarkable accuracy as well as predict the day Easter would fall on Other essays celebrate the notion of random numbers and why they are so hard to achieve Numerical analysis also plays a role in economic models based on the kinetic theory of gases or simplified markets involving iterations of buying and selling Hayes goes on to explain how statistics have been applied to compute which quarrels from interpersonal to world wars are the deadliest surprising results here Challenging but rewarding for anyone intrigued by numbers Kirkus Reviews As much as any book I can name *Group Theory in the Bedroom* conveys to a general audience the playfulness involved in doing mathematics how questions arise as a form of play how our first attempts at answering questions usually seem naive in hindsight but are crucial for finding eventual solutions and how a good solution just feels right David Austin Notices of the AMS [Fortschritte der Chemie organischer Naturstoffe / Progress in the Chemistry of Organic Natural Products, Vol. 93](#) Mahendra Sahai,Edda Gössinger,Marta Luzhetska,Johannes Härle,Sajeli A. Begum,Anil B. Ray,2010-06-17 Lignans by convention are a group of natural products that are formed by linking two phenylpropanoid units C C units by oxidative coupling Most importantly in 6 3 a lignan two C C units are bound through the central carbon of their side chains 6 3 0 i e the 8 and 8 positions 1 2 The occurrence of C C dimers linked at sites other 6 3 0 than the 8 8 positions is also known and these compounds have been termed neolignans 3 4 As these two groups of compounds have close structural as well as biosynthetic relationships they are often associated together and incorporated under the general term lignan 5 The diverse structural categorization of true lignans and of a few neolignans is presented in Fig 1 Through the years several review articles or books covering different facets of lignans including their ch istry 6 7 biogenesis 8 synthesis 9 and biological activities 10 have been published Enduring research for the investigation of secondary metabolites of plants has evidenced some compounds that are biogenetically related to true lignans or neolignans but bear some features not discerned in conventional lignans These compounds or groups of compounds have been termed as non conventional lignans and include coumarinolignans avonolignans and stilbenolignans The non conventional lignans like the conventional ones have two C C units linked 6 3 together but have additional structural features to place them also under the category of coumarins avonoids or stilbenes
