attempting to mimic nature by synthesizing complex natural products from raw material is a challenge that is fraught with pitfalls To tackle this unique but potentially rewarding task researchers can rely on well established reactions and methods of practice or apply their own synthesis methods to verify their potential Whatever the goal and its complexity there are multiple ways of achieving it We must now establish a strategic and effective plan that requires the minimum number of steps but lends itself to widespread use This book is structured around the study of a dozen target products butyrolactone macrolide indole compound cyclobutanic terpene spiro and polycyclic derivatives etc For each product the different disconnections are presented and the associated syntheses are analyzed step by step The key reactions are described explicitly followed by diagrams showing the range of impact of certain transformations This set of data alone is conducive to understanding syntheses and indulging in this difficult but worthwhile activity
