makes an interesting and worthwhile contribution to the ever expanding body of literature on sustainable development and therefore is to be recommended Karen Scott Journal of Environmental Law this is an essential text for the study of sustainability and institutional change an invaluable professional development text for the practitioner and a text to ponder slowly in all its complexities for an academic study of sustainability Kate Crowley Australian Journal of Environmental Management Does the road to sustainable development run through institutional reform or better yet institutional learning In this well argued book Robin Connor and Stephen Dovers draw on a range of case studies to demonstrate the critical role that institutions play in determining the course of human environment relations Oran R Young University of California Santa Barbara US Connor and Dovers correctly argue that achieving sustainability is a long term process In this context they analyze broad institutional innovations toward sustainability to date from Europe to New Zealand from sustainability councils to property rights to suggest how the historical process might be improved and accelerated This is among the most constructive efforts I have read Richard B Norgaard University of California Berkeley US It is clear that the transition to ecologically sustainable patterns of development requires significant institutional change yet we face a paradox Although institutions are the primary means of driving reform they are themselves a root cause of unsustainable development and a barrier to positive change This volume moves beyond the current debate by advancing our understanding of the nature of institutional change the features of more appropriate institutional settings and the manner in which change can be enabled Institutional Change for Sustainable Development presents a flexible accessible yet robust conceptual framework for comprehending institutional dimensions of sustainability emphasising the complexity of institutional systems and highlighting the interdependence between policy learning and institutional change This framework is applied and developed through the analysis of five significant arenas of institutional and policy change environmental policy in the EU New Zealand s landmark

Resource Management Act strategic environmental assessment emerging National Councils for Sustainable Development and transformative property rights instruments From these explorations key principles for institutional change are identified including the institutional accommodation of a sustainability discourse the interdependence of normative and institutional change reiteration and learning integration in policy and practice subsidiarity and legal change Institutional Change for Sustainable Development will be of interest to researchers policymakers and practitioners concerned with sustainability resource management and environmental policy Natural Resource Management and Institutional Change Joginder Singh Negi,2012

Games for triggering collective change in natural resource management: A conceptual framework and insights from four cases from India Falk, Thomas,Zhang, Wei,Meinzen-Dick, Ruth Suseela,Bartels, Lara,2021-01-20 As resource users interact and impose externalities onto each other institutions are needed to coordinate resource use create trust and provide incentives for sustainable management Coordinated collective action can play a key role in enabling communities to manage natural resources more sustainably But when such collective action is not present what can be done to foster it There is growing awareness that the governance of natural resources has to be adapted to the specific context Interventions are often implemented at small scale and the potential to scale up facilitation intensive approaches is limited Moreover sustainable resource management frequently fails to emerge or breaks down after the project ends To date researchers have typically used behavioral games to study cooperation patterns of communities Recently games have been adapted as learning and stakeholder engagement tools to improve management of the commons strengthen self regulation of resource use and enhance constructive interactions among resource users Combining games with other interventions and tools and facilitated discussions has been proposed as a promising approach to improve collective action institutions through experiential learning a classic approach in education This paper reviews existing literature and synthesizes lessons learned from a series of studies testing the use of behavioral games for institutional capacity development in India We conclude that while games alone will not be the solution to all natural resource management challenges games can provide a structured and therefore replicable approach for influencing behavior They can also improve system understanding raise awareness influence norms facilitate dialogue train for crisis response and increase legitimacy of decisions
