**Natural Resources, Renewable Energy, and Governance** Tii Njivukuh Nchofoung,Nathanael Ojong,2022 Based on data for 48 African countries for the period 2000 2020 we analyse the effects of natural resources on renewable energy development and the mediating effects of governance on that relationship For this purpose the Ordinary Least Squares method was used to develop a baseline regression model and the Generalized Method of Moments GMM approach was used for the dynamic model regression Quantile regression was used for robustness checking across the various distributions of renewable energy First we find that natural resources enhance renewable energy development in Africa and that the results are robust across alternative specifications of natural resources and governance except for forest resources which have a negative effect on renewable energy development When robustness is checked through a quantile regression analysis the results show that the positive effect depends on the conditional distribution of natural resources and the type of natural resource under consideration The negative effect of total natural resources becomes weaker as we move towards higher quantiles Second governance interacts with natural resource rents to generate positive effects across different governance specifications and natural resources except for coal rent We thereby derive some relevant implications for renewable energy financing in African countries

**Environmental Chemistry** Dr Sateesh Kumar Beepala, 2024-09-01 I am delighted to introduce the previous edition of Environmental Chemistry book for III B Sc Semester V Chemistry students from all universities in Andhra Pradesh. This book is precisely created in compliance with the most recent APSCHE syllabus which takes effect in the academic year 2023-24. With many years of teaching expertise I have come to understand the difficulties that students confront when learning the language and content of the curriculum. To solve these issues I made a concentrated effort to produce a streamlined textbook that is both accessible and thorough. This textbook is divided into five units: Introduction of Environment, Air pollution, Water pollution, Chemical Toxicology and Ecosystem, Bio Diversity. The primary features of the textbook are: 1. Adherence to the APSCHE Upcoming NEP 2020 Syllabus, 2. Write in Clear and Simple Language, 3. Diagrams are intended to be simple and easily repeatable for improved learning and retention, 4. Additional MCQs are extremely useful for students preparing for competitive exams. Finally, it is my genuine goal that this book will be a beneficial resource for students, allowing them to easily and confidently grasp the ideas of Environmental Chemistry.

*Ireland's Green Opportunity* Peter Brennan, 2017-01-04 Ireland's Green Opportunity: Driving Investment in a Low Carbon Economy provides the first ever overview of the green economy from an Irish perspective. It identifies business opportunities in all the main sub-sectors that comprise the green economy. Looks at export opportunities and trends in the UK, US and other major markets. Is an information source for project promoters, investors and employees. Covers the key policies that are driving the low carbon agenda. For example, the science, economics and politics of climate change are covered by way of background, as are issues such as sustainability and the EU's low carbon strategy. Ireland will be responding to these game-changing issues over the coming period. Ireland's Green Opportunity is therefore designed to help stimulate debate about our low carbon strategy while raising awareness about the business opportunities that will arise domestically and in export markets. Peer reviewed by eight of Ireland's leading experts in climate change and the green economy, this groundbreaking book will be of interest to students, businesspeople and policymakers.
