Sustainable Natural Resource Management in the Himalayan Region Roshan Man Bajracharya,Bishal K. Sitaula,Smriti Gurung,Nani Raut,2021 The greater Himalayan region stretching from Afghanistan in the west to Myanmar in the east is home to about a quarter of a billion people who greatly depend on available natural resources for their survival and livelihoods The ever increasing population pressure and changing climate have grave implications for the sustenance of human health and habitation in the foreseeable future The region is confronted with numerous challenges related to forest degradation land productivity disaster risk water management biodiversity loss erratic climatic patterns as well as socio political capacity The limits of arable land have essentially been reached while the need for enhancing production to sustain human nutritive requirements and livelihoods continues to increase Hence the intensification of agriculture has become a necessity rather than a choice Yet producing greater numbers of crops and quantities of food fiber and other materials on the same parcel of land runs the risk of degrading the soil fertility productivity and overall quality Therefore means to achieve this without irreversibly damaging

the soil and land resource base have become imperative To this end agro forestry agro silvi pastoral systems and the adoption of a variety of regenerative crops soil and water management and conservation practices offer the potential to deliver multiple benefits without sacrificing the very resource upon which the human population depends The need for ecologically sound and sustainable management of natural resources in the Himalayan region as well as the adaptation of local communities to the impacts of climate change and measures for its mitigation cannot be over emphasized This book presents findings on approaches to sustainable land management and the intensification of agriculture and animal husbandry related to soil organic matter management and carbon sequestration for multiple benefits and the agroforestry as a crop diversification strategy with livelihood and climate mitigation adaptation benefits along with other aspects of forest biodiversity and water resources management The book deals with technical socio economic policy and biodiversity issues related to the sustainable use and management of natural resources namely forests soil land water crops animal husbandry and diversity of flora fauna as well as disaster risk and vulnerability of communities in the Himalayan region There is a continuing need to study and research approaches for harmonizing human needs and lifestyles with natural ecosystems and processes so that both may co exist in a mutually beneficial manner *Geoenvironmental Hazards in Himalaya* Bindhy Wasini Pandey,2002

Wildlife in the Himalayan Foothills P. C. Towards Sustainable Livelihoods and Ecosystems in Mountain Regions Vishwambhar Prasad Sati,2013-12-21 Sustainable livelihoods and ecosystems are far reaching and burning issues in the wake of high growth of population low production and per ha yield of crops and depletion of biodiversity resources Mountainous regions of the world are facing the menace of poverty food insecurity and malnutrition Further tremendous growth in population and slow pace of development have together forced most of the population to live below poverty line Traditionally depending upon cultivating subsistence crops for food requirement the people living in mountainous region are unable to produce sufficient food grains to run their livelihood smoothly The Himalayas is one of the world s biodiversity hotspots and has an abundance of natural resources land water and forest life sustaining factors The geo environmental conditions climate and landscape further enhance the possibility of sustainable livelihoods through eco tourism harnessing water resources and utilizing forests and their products sustainably Diversifying agricultural practices through cultivating cash and cereal crops and enhancing livelihood options through extensive use of timber and non timber based forestry products can help to eradicate poverty and provide food security This book consists of an introduction and nine chapters covering geo environmental setting socio economy and population profile sustainable livelihoods diversification and enhancement livelihood analysis development of tourism and hydroelectricity case studies mountain ecosystems sustainable mountain development and also presents a conclusion

Impact of Climate Change on Water and Health Velma I. Grover,2012-12-18 Since the hydrological cycle

is so intricately linked to the climate system any change in climate impacts the water cycle in terms of change in precipitation patterns melting of snow and ice increased evaporation increased atmospheric water vapor and changes in soil moisture and run off Consequently climate change could result in floods in some areas and droughts in others resulting in varying availability and the quality of water affects the quality of life food security and also health security This book examines the impact of climate change on water as well as health **Natural Resource Management** B.W. Pandey (ed. By),2005-01-01 *The Resilience of Traditional Knowledge Systems for a Sustainable Future* Anwesha Borthakur,Pardeep Singh,2024-11-29 This book is an effort to draw attention to the resilience of traditional knowledge systems for a sustainable future in the Himalayas with a particular focus on agriculture and food practices Through examples from the region it underscores the importance of these practices in navigating contemporary global environmental challenges The Himalayan region known for its socio cultural diversity and unique agricultural ecology emerges as a major hotspot of climate change Therefore acknowledging and recognizing the lived experiences of the locals along with their traditional knowledge associated with agriculture and food systems becomes imperative for devising adaptation and mitigation strategies amidst the unfolding environmental and climate crisis Drawing upon insights from local communities and experts deeply rooted in the Himalayan context this book not only documents traditional agricultural and food systems but also sheds light on the pressing anthropogenic challenges threatening their sustainability We believe that research and documentation of traditional knowledge practices of the local and indigenous communities are essential for tackling the current and projected global environmental challenges This book advocates for a holistic approach to addressing both current and future global environmental challenges It serves as a timely call to action for researchers policymakers and practitioners alike

Himalaya: Mountains of Destiny Suresh Chand Rai,2025-09-30 This book highlights the different ways of seeing and engaging with the natural world and underscores the need to acknowledge and honour the ways that indigenous peoples have done for generations Mountain regions occupy about one fourth of the Earth s terrestrial surface and they are home to almost one tenth of the global population and offer goods and services to more than half of humanity Consequently they received attention at the highest level during the 1992 United Nations Conference on Environment and Development UNCED in Rio de Janeiro s Earth Summit Mountain environments are crucial to the survival of global ecosystems many of them are experiencing degradation in terms of accelerated soil erosion landslides and rapid loss of habitat and genetic diversity etc Hence proper management of mountain resources and the socio economic development of the people deserves immediate action Unfortunately the capacity of mountain ecosystems to provide continued resources is threatened due to the increasing stress of human impact at the global level in general and the Himalayan region in particular The Himalaya a highly complex and diversified mountain system in terms of bio physical attributes is considered a life support system for millions of people in the uplands and many more in lowland areas of India It acts as a climate regulator for much of Asia and is globally

recognized for its sacred spiritual and philosophical values The richness and uniqueness of bio physical and socio cultural diversity and the rich heritage of Indigenous Knowledge and Practices IKP have earned the Himalaya global recognition Being young and geotectonically active this system remains inherently unstable fragile and prone to natural disasters Also the vulnerability of this mountain chain to human induced disturbances is now well established Therefore being a special and sensitive system and more importantly due to its life support values the Himalaya deserve special attention It requires conservation and development interventions in a sustainable manner which do not ignore the imperatives of mountain specificities Thus calls for evolving new paradigms of long term conservation and sustainable development that help restore a complex balance between economic interests and ecological imperatives in the region and country in general Understanding that the Himalaya are important for the Ecological Security of the region there is a need for its conservation in the 21st century The present book proposal has been decided to document the Himalayan priorities to achieve sustainable development goals The book is consisting of four sections which will deal with the different dimensions of the Himalaya The present book is conceptualized with an idea to collect case studies on various aspects and applications of conservation measures to value their knowledge and wisdom and to achieve sustainable development goals SDGs
