environmental studies law and related fields      Reforming Law and Economy for a Sustainable Earth Paul Anderson, 2014-09-19 Few concerns preoccupy contemporary progressive thought as much as the issue of how to achieve a sustainable human society The problems impeding this goal include those of how to arrest induced global environmental change GEC persistent disagreements about the contribution of economic activities to GEC and further differences in views on how these activities can be reformed in order to reduce the rate of change and thus to mitigate threats to much life on Earth Reforming Law and Economy for a Sustainable Earth aims to help resolve these problems in two ways Since addressing GEC will require global coordination the book first clarifies the conditions necessary to achieve this effectively Paul Anderson explores these conditions with the aid of a sustained analysis of key concepts in influential disciplines particularly in social and political theory and law relating to the transition to a sustainable economy Second Anderson tackles the problem of how to arrest GEC by incisively evaluating two leading theoretical positions in terms of their capacity to support the conditions required for effective global coordination From this basis the book offers an extensive critique of the idea that global environmental problems can be solved within the framework of global capitalism It also critically reviews and advances the proposition that global sustainability can be achieved only by changing the capitalist form of organizing the economy Enriched by a genuinely interdisciplinary approach the originality of Reforming Law and Economy for a Sustainable Earth lies in the manner it combines a rigorous analysis of the requirements for global sustainability with decisive conclusions as to what are and what are not viable means of fulfilling those requirements The book advances research on sustainability within key disciplines among them political theory law and social science by offering a timely and insightful statement about the global environmental predicament in the 21st century      A Vision for the U.S. Forest Service Roger A. Sedjo, 2015-09-25 Originally published in 2000 this title is a collection of engaging nontechnical contributions of scholars policymakers and forestry officials providing broad reflections on the agency's past and future contemporary perspectives about the use and stewardship of public lands and insightful analyses about the science involved in the practice of scientific management The authors offer challenging ideas for evaluating the performance of the U S Forest Service reshaping its mission enhancing its effectiveness improving internal morale and increasing public participation in the agency It is a valuable resource for policymakers professional foresters and any student interested in Environmental Studies      **General Technical Report PNW-GTR**, 1995      *Free Market Environmentalism* Terry L. Anderson, 2019-03-04 Although there is in the United States a clear national consensus supporting the protection of the environment advocates often profoundly disagree about the policies best designed to achieve this end The traditional answer has been that government must intervene through legislation and regulation of behavior to preserve environmental values Th      **A London Bibliography of the Social Sciences**, 1931 Vols 1 4 include material to June 1 1929      *Property Law and Economics* Boudewijn Bouckaert, 2010-01-01 This book contains illuminating and carefully written literature reviews on the central topics of the

economics of property rights and institutions As a bonus it includes two fascinating chapters on topics off the beaten path slavery and new types of property rights in environmental goods This book will be indispensable for students and experienced scholars alike Eric Posner University of Chicago Law School US This study covers property law and property rights providing a full summary and comprehensive bibliography of the existing law together with discussion from an economic perspective on the most important aspects of property law Leading experts have brought together their knowledge and insight on a full range of issues including comparative property law and the history of property law to create a truly autonomous interdisciplinary resource This essential reference work will strongly appeal to scholars and students enrolled in academic programmes of law and economics Academic lawyers involved in research and teaching of private common law practicing lawyers in the field of real estate law as well as economists involved in researching development economics and transition economics will also find this an invaluable resource *Energy Abstracts for Policy Analysis* ,1985 **American Book**

**Publishing Record** ,1984-04 Environmental Governance and Common Pool Resources Michael Faure,Peter Mascini,Jing Liu,2017-09-07 This book analyses the drivers of specific common pool resource problems particularly in fisheries and forestry examining the way in which private and public regulation have intervened to fight the common pool resource problem by contributing to the establishment and maintenance of property rights It focuses on the various forms of regulation that have been put in place to protect fisheries and forestry over the past decades both from a theoretical as well as from a policy perspective comparing the concrete interaction of legal and policy instruments in eight separate jurisdictions

Regulation and Economic Analysis R.L. Gordon,2013-03-09 Regulation and Economic Analysis A Critique Over Two Centuries argues that long experience with the practice of regulation creates a broad anti intervention consensus among economists This consensus is based on comparison of real intervention to real markets rather than an ideological preconception It is shown that economic theory can support all possible positions on intervention Much theory is too abstract to support any policy position many arguments about how intervention might help contain qualifications expressing doubts about whether the potential can be realized many theories illustrate the drawbacks of intervention The vast literature on these issues concentrates either on specific cases or polemics that exaggerate both sides of the argument Regulation and Economic Analysis seeks to show the depth of the discontent develop interpretations of economic theory that follow from skepticism about statism and provide selected illustrations The discussion begins with examination of general equilibrium theory and proceeds to discuss market failure with stress on monopoly and particularly what is deemed excessive concern with predatory behavior International trade issues transaction costs property rights economic theories of government the role of special institutions such as contracts the defects of macroeconomic and equity arguments for regulating individual markets environmental economics and the defects of public land management policies are examined *Environmental Philosophy* Christopher Belshaw,2014-12-18 This introduction to the philosophy of the environment examines current

debates on how we should think about the natural world and our place within it The subject is examined from a determinedly analytic philosophical perspective focusing on questions of value but taking in attendant issues in epistemology and metaphysics as well The book begins by considering the nature extent and origin of the environmental problems with which we need to be concerned Chapters go on to consider familiar strategies for dealing with environmental problems and then consider what sort of things are of direct moral concern examining in turn at animals non sentient life forms natural but non living things and deep ecology The final part of the book investigates notions of value natural beauty and the place of human beings in the scheme of things
