Hankins,Robert J. Silverman,2014-07-14 Thomas Hankins and Robert Silverman investigate an array of instruments from the seventeenth through the nineteenth century that seem at first to be marginal to science magnetic clocks that were said to operate by the movements of sunflower seeds magic lanterns ocular harpsichords machines that played different colored lights in harmonious mixtures Aeolian harps a form of wind chime and other instruments of natural magic designed to produce wondrous effects By looking at these and the first recording instruments the stereoscope and speaking machines the authors show that scientific instruments first made their appearance

as devices used to evoke wonder in the beholder as in works of magic and the theater The authors also demonstrate that these instruments even though they were often tricks were seen by their inventors as more than trickery In the view of Athanasius Kircher for instance the sunflower clock was not merely a hoax but an effort to demonstrate however fraudulently his truly held belief that the ability of a flower to follow the sun was due to the same cosmic magnetic influence as that which moved the planets and caused the rotation of the earth The marvels revealed in this work raise and answer questions about the connections between natural science and natural magic the meaning of demonstration the role of language and the senses in science and the connections among art music literature and natural science Originally published in 1995 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Natural Magic Renée Bergland, 2024-04-30 A captivating portrait of the poet and the scientist who shared an enchanted view of nature Emily Dickinson and Charles Darwin were born at a time when the science of studying the natural world was known as natural philosophy a pastime for poets priests and schoolgirls The world began to change in the 1830s while Darwin was exploring the Pacific aboard the Beagle and Dickinson was a student in Amherst Massachusetts Poetry and science started to grow apart and modern thinkers challenged the old orthodoxies offering thrilling new perspectives that suddenly felt radical and too dangerous for women Natural Magic intertwines the stories of these two luminary nineteenth century minds whose thought and writings captured the awesome possibilities of the new sciences and at the same time strove to preserve the magic of nature Just as Darwin's work was informed by his roots in natural philosophy and his belief in the interconnectedness of all life Dickinson's poetry was shaped by her education in botany astronomy and chemistry and by her fascination with the enchanting possibilities of Darwinian science Casting their two very different careers in an entirely fresh light Renée Bergland brings to life a time when ideas about science were rapidly evolving reshaped by poets scientists philosophers and theologians alike She paints a colorful portrait of a remarkable century that transformed how we see the natural world Illuminating and insightful Natural Magic explores how Dickinson and Darwin refused to accept the separation of art and science Today more than ever we need to reclaim their shared sense of ecological wonder

mumbo jumbo fraud and deeply serious study magic was central to the European Renaissance fascinating many of its greatest figures Brian Copenhaver s wonderful anthology will be welcomed by everyone from those with the most casual interest in the magical tradition to anyone drawn to the Renaissance and the tangled arcane roots of the scientific tradition

Of Magnetism And Gravity Through The Ages Yoshitaka Yamamoto,2017-12-28 This book seeks to understand what bring to pass the birth of modern physics by focusing upon the formation of the concept of force This would be the first book to note the important role magnetism has played in this process Indeed the force between celestial bodies before the introduction of the Isaac Newtonian gravitational force is first introduced by Johannes Kepler by analogy with the magnetic force Moreover this book by concentrating our attention on the magnetism fully describes the developments and the recognition of the force concept during the Middle Ages The detailed description of the Middle Ages and the Renaissance is a strong point of this book By discussing and emphasizing on the role accomplished by the magnetic force this book makes clear the connection between the natural magic and the modern experimental physics This book will open up a new aspect of the birth of modern physics *Semantics and Cultural Change in the British Enlightenment: New Words and Old* Carey

McIntosh,2020-05-18 Obsolete old words from seventeenth century English villages reflect the realities of working class life exhausting labor dirt bizarre foods magic horses outrageous sexism feudal duties New words first appearing in print 1650 1800 reflect a middle class culture very different from an earlier courtly culture interested in money coffee houses and self fulfillment The book contains chapters on pre industrial and middle class culture the scientific revolution and semantic change They give strong evidence that new words and the new senses of old words played a key role in the British Enlightenment its links with quantification and natural science its tendencies towards reorganization and democracy its redefinitions and revitalizations of women s roles social stereotypes the public sphere and the very concepts of individualism

sociability and civilization itself *Music, Nature and Divine Knowledge in England, 1650-1750* Tom Dixon, 2023 During a period of tumultuous change in English political religious and cultural life music signified the unspeakable presence of the divine in the world for many What was the role of music in the early modern subject's sensory experience of divinity While the English intellectuals Peter Sterry 1613-72 Richard Roach 1662-1730 William Stukeley 1687-1765 and David Hartley 1705-57 have not been remembered for their musicking this book explores how the musical reflections of these individuals expressed alternative and often uncustomary conceptions of God the world and the human psyche Music is always potentially present in their discourse emerging as a crucial form of mediation between states exoteric and esoteric material and spiritual outer and inner public and private rational and mystical Dixon shows how Sterry Roach Stukeley and Hartley's shared belief in truly universal salvation was articulated through a language of music implying a feminising influence that set these male individuals apart from contemporaries who often strictly emphasised the rational i.e. the supposedly masculine aspects of religion Musical discourse instead provided a link to a spiritual plane that brought these intellectuals closer to ultimate reality Theirs was a discourse firmly rooted in the real existence of contemporary musical practices both in terms of the forms and styles implied in the writings under discussion and the physical circumstances in which these musical genres were created and performed Through exploring ways in which the idea of music was employed in written transmission of elite ideas this book challenges conventional classifications of a seventeenth century Scientific Revolution and an eighteenth century Enlightenment defending an alternative narrative of continuity and change across a number of scholarly disciplines from seventeenth century English intellectual history and theology to musicology and the social history of music **Natural Magick - Magiae Naturalis** John Baptista Porta, 2011-12-03 There are two sorts of Magick the one is infamous and unhappy because it has to do with foul Spirits and consists of incantations and wicked curiosity and this is called Sorcery an art which all learned and good men detest neither is it able to yield an truth of reason or nature but stands merely upon fancies and imaginations such as vanish presently away and leave nothing behind them as Jamblicus writes in his book concerning the mysteries of the Egyptians The other Magick is natural which all excellent wise men do admit and embrace and worship with great applause neither is there any thing more highly esteemed or better thought of by men of learning The most noble Philosophers that ever were Pythagorus Empedocles Democritus and Plato forsook their own countries and lived abroad as exiles and banished men rather than as strangers and all to search out and to attain this knowledge and when they came home again this was the Science which they professed and this they esteemed a profound mystery They that have been most skillful in dark and hidden points of learning do call this knowledge the very highest point and the perfection of Natural Sciences inasmuch that if they could find out or devise amongst all Natural Sciences any one thing more excellent or more wonderful than another that they would still call by the name of Magick
