The Natural Radiation Environment John Allan Stewart Adams, Wayne M. Lowder, 1964 The interplay between man and each environmental factor and that between the various factors themselves are fascination in their great intricacy and delicate balance

The Natural Radiation Environment Jacob Kastner, 1968 Natural Radiation Exposure in the United States Donald T. Oakley, 1972 The Natural Radiation Environment VII J.P. McLaughlin, E.S. Simopoulos, F. Steinhäusler, 2005-03-30 The Natural Radiation Environment Symposium NRE VII the Seventh in the NRE series which commenced forty years ago in 1963 at Rice University Texas was held in Rhodes Greece in May 2002 During the intervening four decades the research work presented at these NRE Symposia has contributed to a deeper understanding of natural radiation and in particular of its contribution to human radiation exposures It is clear from the quality and diversity of the 143 papers in this volume of Radioactivity in the Environment series that the study of the natural radiation environment is an active and continually expanding field of research The papers in this volume fall into a number of main and topical research areas namely the measurement and behaviour of natural radionuclides in the environment cosmic radiation measurement and dosimetry the external penetrating radiation field at ground level TENR Technologically Enhanced Natural Radiation and NORM Naturally Occurring Radioactive Materials studies assessment of the health effects of radon regulatory aspects of natural radiation exposures In these papers the results of many new surveys of natural radionuclide levels in the environment and of improved methods of detection are described While some of the natural radiation sources investigated are unmodified by human activity many accounts are given here of exposures to natural sources which have been enhanced by technology Such TENR and NORM exposures are shown to range from activities such as mining oil and gas exploitation the use of industrial by products as building materials to space travel to name but a few In several cases quite high doses to some individuals are shown to occur Accounts are given here of methods to prevent and reduce exposures to such sources

Evaluation of Guidelines for Exposures to Technologically Enhanced Naturally Occurring Radioactive Materials National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Evaluation of EPA Guidelines for Exposure to Naturally Occurring Radioactive Materials, 1999-02-25 Naturally occurring radionuclides are found throughout the earth's crust and they form part of the natural background of radiation to which all humans are exposed Many human activities such as mining and milling of ores extraction of petroleum products use of groundwater for domestic purposes and living in houses alter the natural background of radiation either by moving naturally occurring radionuclides from inaccessible locations to locations where humans are present or by concentrating the radionuclides in the exposure environment Such alterations of the natural environment can increase sometimes substantially radiation exposures of the public Exposures of the public to naturally occurring radioactive materials NORM that result from human activities that alter the natural environment can be subjected to regulatory control at least to some degree The regulation of public exposures to such technologically enhanced naturally occurring radioactive materials TENORM by the US Environmental Protection Agency EPA and other regulatory and advisory organizations is the subject of this study by the National Research Council's Committee on the Evaluation of EPA Guidelines for Exposures to Naturally Occurring Radioactive Materials

Radon, 1993 **The Natural Radiation Environment** Jacob Kastner, 1968 *Man-Made and Natural Radioactivity in Environmental Pollution and Radiochronology* Richard Tykva, Dieter Berg, 2013-03-14 Radioactivity can be detected at different levels in almost all objects all over the world including the human body This omnipresence of naturally occurring radioactivity is of immediate and crucial concern to

people who work in the nuclear industry to state and local authorities responsible for environmental protection and control of nuclear weapons and to researchers as physics e g interaction in scientific and technological disciplines such of radiation with matter chemistry e g management of radioactive wastes biology Ce g radiation bioeffects and risks ecology e g remediation of environmental pollution electronics e g measurement instruments etc Unlike other environmental pollutants such as heavy metals and pesticides some other scientific disciplines for example archaeology hydrology and geology profit by the environmental radionuclides using methods based on their application in radiochronology The basic goal of this book is to examine the complex state of radioactivity in the environment including its sources and applications In principle there are two sources of environmental radioactivity namely man made and natural The authors of this book set out to analyze mainly empiric al aspects of the activities of both groups On one hand a detailed analysis of the sources releasing radionuclides into the environment by human activities should while describing environmental pollution and its dangers contribute to its decrease in the future
