Nature And History:

The Natural History of America American Museum of Natural History, 2008-11-15 **Ancient Natural History** Roger French, 2005-08-08 Ancient Natural History surveys the ways in which people in the ancient world thought about nature The writings of Aristotle Theophrastus Strabo Pliny are examined as well as the popular beliefs of their contemporaries Roger French finds that the same natural historical material was used to serve the purposes of both the Greek philosopher and the Christian allegorist or of a taxonomist like Theophrastus and a collector of curiosities like Pliny He argues convincingly that the motives of ancient writers on nature were rarely scientific and indeed that there was not really any science at all in the ancient world This book will make fascinating reading for students academics and anyone who is interested in the history of science or in the ancient history of ideas *Magazine of Natural History* John Claudius Loudon, Edward Charlesworth, John Denson, 1830 **Magazine of Natural History**, 1830 *The Wiltshire Archaeological and Natural History Magazine*, 1874 Includes proceedings of the annual general meetings of the Wiltshire Archaeological and Natural History Society **A Natural History of Natural Theology** Helen De Cruz, Johan De Smedt, 2014-12-19 An examination of the cognitive foundations of intuitions about the existence and attributes of God Questions about the existence and attributes of God form the subject matter of natural theology which seeks to gain knowledge of the divine by relying on reason and experience of the world Arguments in natural theology rely largely on intuitions and inferences that seem natural to us occurring spontaneously at the sight of a beautiful landscape perhaps or in wonderment at the complexity of the cosmos even to a nonphilosopher In this book Helen De Cruz and Johan De Smedt examine the cognitive origins of arguments in natural theology They find that although natural theological arguments can be very sophisticated they are rooted in everyday intuitions about purpose causation agency and morality Using evidence and theories from disciplines including the cognitive science of religion evolutionary ethics evolutionary aesthetics and the cognitive science of testimony they show that these intuitions emerge early in development and are a stable part of human cognition De Cruz and De Smedt analyze the cognitive underpinnings of five well known arguments for the existence of God the argument from design the cosmological argument the moral argument the argument from beauty and the argument from miracles Finally they consider whether the cognitive origins of these natural theological arguments should affect their rationality **Photography, Natural History and the Nineteenth-Century Museum** Kathleen Davidson, 2017-12-02 The Victorian era heralded an age of transformation in which momentous changes in the field of natural history coincided with the rise of new visual technologies Concurrently different parts of the British Empire began to more actively claim their right to being acknowledged as indispensable contributors to knowledge and the progress of empire This book addresses the complex relationship between natural history and photography from the 1850s to the 1880s in Britain and its colonies Australia New Zealand and to a lesser extent India Coinciding with the rise of the modern museum photography's arrival was timely and it

rapidly became an essential technology for recording and publicising rare objects and valuable collections. Also during this period the medium assumed a more significant role in the professional practices and reputations of naturalists than has been previously recognized and it figured increasingly within the expanding specialized networks that were central to the production and dissemination of new knowledge. In an interrogation that ranges from the first forays into museum photography and early attempts to document collecting expeditions to the importance of traditional and photographic portraiture for the recognition of scientific discoveries, this book not only recasts the parameters of what we actually identify as natural history photography in the Victorian era but also how we understand the very structure of empire in relation to this genre at that time.

The Analyst: A Quarterly Journal of Science, Literature, Natural History, and the Fine Arts William Holl, 2025-08-03. Reprint of the original first published in 1837. The Antigonus publishing house specialises in the publication of reprints of historical books. We make sure that these works are made available to the public in good condition in order to preserve their cultural heritage.

The art of experimental natural history Dana Jalobeanu, 2015. Francis Bacon introduced his contemporaries to a new way of investigating nature. He called it natural and experimental history. Despite its rather traditional name, Bacon's natural and experimental history was a new discipline; it comprised new ideas, new practices, and new models of collaborative research. This new discipline was in many ways a surprisingly successful project. It provided early modern naturalists with tools, methods, and models for both investigating nature and writing about their subject. It also offered a set of norms and values for guiding research. And yet this new discipline was not a science of nature; it was more like an art. This book aims to trace the emergence, evolution, and reception of Francis Bacon's art of experimental natural history.

Natural History Societies and Civic Culture in Victorian Scotland Diarmid A Finnegan, 2015-10-06. The relationship between science and civil society is essential to our understanding of cultural change during the Victorian era. Finnegan's study looks at the shifting nature of this process during the nineteenth century using Scotland as the focus for his argument.

A History of the Earth and Animated Nature Oliver Goldsmith, 1881. Natural History Dioramas Sue Dale Tunnicliffe, Annette Scheersoi, 2014-12-05. This book brings together in a unique perspective aspects of natural history dioramas: their history, construction, and rationale; interpretation and educational importance from a number of different countries from the west coast of the USA across Europe to China. It describes the journey of dioramas from their inception through development to visions of their future. A complementary journey is that of visitors and their individual sense-making and construction of their understanding from their own starting points, often interacting with others, e.g. teachers, peers, parents, as well as media, e.g. labels. Dioramas have been hitherto a rather neglected area of museum exhibits, but a renaissance is beginning for them and their educational importance in contributing to people's understanding of the natural world. This volume showcases how dioramas can reach a wide audience and increase access to biological knowledge.
