The Nature of Concepts Philip Van Looke,2012-10-12 The Nature of Concepts examines a central issue for all the main disciplines in cognitive science how the human mind creates and passes on to other human minds a concept An excellent cross disciplinary collection with contributors including Steven Pinker Andy Clarke and Henry Plotkin

The Nature of Concepts Philip Van Looke,2012-10-12 The Nature of Concepts examines a central issue for all the main disciplines in cognitive science how the human mind creates and passes on to other human minds a concept An excellent cross disciplinary collection with contributors including Steven Pinker Andy Clarke and Henry Plotkin

The Architecture of Concepts Peter de Bolla,2013-12-02 The Architecture of Concepts proposes a radically new way of understanding the history of ideas Taking as its example human rights it develops a distinctive kind of conceptual analysis that enables us to see with precision how the concept of human rights was formed in the eighteenth century The first chapter outlines an innovative account of concepts as cultural entities The second develops an original methodology for recovering the historical formation of the concept of human rights based on data extracted from digital archives This enables us to track the construction of conceptual architectures over time Having established the architecture of the concept of human rights the book then examines two key moments in its historical formation the First Continental Congress in 1775 and the publication of Tom Paine s Rights of Man in 1792 Arguing that we have yet to fully understand or appreciate the consequences of the eighteenth century invention of the concept rights of man the final chapter addresses our problematic contemporary attempts to leverage human rights as the most efficacious way of achieving universal equality

Travelling Concepts for the Study of Culture Birgit Neumann,Ansgar Nünning,2012-10-01 Bringing together innovative and internationally renowned experts this volume provides concise presentations of the main concepts and cutting edge research fields in the study of culture rather than the infinite multitude of possible themes More specifically the volume outlines different models for the study of culture explores avenues for interdisciplinary exchange assesses key concepts and traces their travels across various disciplinary historical and national contexts To trace the travelling of concepts means to map both their transfer from one discipline approach or culture of research to another and also to identify the transformations which emerge through these processes of transfer The volume serves to show that working with travelling concepts provides a unique strategy for research and research design which can open up a wide range of promising perspectives for interdisciplinary exchange It offers an exemplary overview of an interdisciplinary and international approach to the travelling concepts that organize structure and shape the study of culture In doing so the volume serves to initiate a dialogue that exceeds disciplinary and national boundaries and introduces a self reflexive dimension to the field thus affording a recognition of how deeply disciplinary premises and nation specific research traditions affect different approaches in the study of culture

Shared Representations Sukhvinder S. Obhi,Emily S. Cross,2016-11-17 A collection of cutting edge contributions on the idea of shared representations information sharing

between the brains of those involved *Concise Encyclopedia of Philosophy of Language and Linguistics* Alex Barber, Robert J Stainton, 2010-04-06 The application of philosophy to language study and language study to philosophy has experienced demonstrable intellectual growth and diversification in recent decades *Concise Encyclopedia of Philosophy of Language and Linguistics* comprehensively analyzes and evaluates many of the most interesting facets of this vibrant field An edited collection of articles taken from the award winning *Encyclopedia of Language and Linguistics* Second Edition this volume acts as a single stop desk reference resource for the field comprising contributions from the foremost scholars of philosophy of linguistics in their various interdisciplinary specializations From Plato's *Cratylus* to Semantic and Epistemic Holism this fascinating work authoritatively unpacks the diverse and multi layered concepts of meaning expression identity truth and countless other themes and subjects straddling the linguistic philosophical meridian in 175 articles and over 900 pages Authoritative review of this dynamic field placed in an interdisciplinary context Approximately 175 articles by leaders in the field Compact and affordable single volume format **Conception and Characteristics of Expert Mathematics**

Teachers in China Xinrong Yang, 2013-08-23 The superior performance of East Asian students in recent international studies of mathematics achievement has attracted the attention of educators and policy makers worldwide Xinrong Yang focuses on exploring how an expert mathematics teacher is conceptualized by mathematics educators in China and the characteristics that expert mathematics teachers share The author adopts a sociocultural theory and a prototypical view of conception in this study of teacher expertise and shows that some of the roles expected to be played by expert mathematics teachers in China such as being at the same time a researcher a mentor an expert in examination and an exemplary model are quite different from the roles expected of an expert teacher in Western cultures In addition some characteristics of expert mathematics teachers the author identifies are different from those reported in previous studies Examples include the expert mathematics teachers contemporary constructivist oriented beliefs about mathematics and its learning and teaching and their ability to teach with flexibility balance and coherence Mirror Neuron Systems Jaime A. Pineda, 2009-03-01 The

aim of this book is to bring together social scientists cognitive scientists psychologists neuroscientists neuropsychologists and others to promote a dialogue about the variety of processes involved in social cognition as well as the relevance of mirroring neural systems to those processes Social cognition is a broad discipline that encompasses many issues not yet adequately addressed by neurobiologists Yet it is a strong belief that framing these issues in terms of the neural basis of social cognition especially within an evolutionary perspective can be a very fruitful strategy This book includes some of the leading thinkers in the nascent field of mirroring processes and reflects the authors attempts to till common ground from a variety of perspectives The book raises contrary views and addresses some of the most vexing yet core questions in the field providing the basis for extended discussion among interested readers and laying down guidelines for future research It has been argued that interaction with members of one's own social group enhances cognitive development in primates and

especially humans Barrett Henzi 2005 Byrne and Whiten 1988 Donald 1991 and others have speculated that abilities such as cooperation deception and imitation led to increasingly complex social interactions among primates resulting in a tremendous expansion of the cerebral cortex The evolutionary significance of an imitation capability in primates is matched by its ontological consequences *Concise Encyclopedia of Semantics* Keith Allan, 2010-04-06 *Concise Encyclopedia of Semantics* is a comprehensive new reference work aiming to systematically describe all aspects of the study of meaning in language It synthesizes in one volume the latest scholarly positions on the construction interpretation clarification obscurity illustration amplification simplification negotiation contradiction contraction and paraphrasing of meaning and the various concepts analyses methodologies and technologies that underpin their study It examines not only semantics but the impact of semantic study on related fields such as morphology syntax and typologically oriented studies such as grammatical semantics where semantics has made a considerable contribution to our understanding of verbal categories like tense or aspect nominal categories like case or possession clausal categories like causatives comparatives or conditionals and discourse phenomena like reference and anaphora COSE also examines lexical semantics and its relation to syntax pragmatics and cognitive linguistics and the study of how logical semantics develops and thrives often in interaction with computational linguistics As a derivative volume from *Encyclopedia of Language and Linguistics* Second Edition it comprises contributions from 150 of the foremost scholars of semantics in their various specializations and draws on 20 years of development in the parent work in a compact and affordable format Principally intended for tertiary level inquiry and research this will be invaluable as a reference work for undergraduate and postgraduate students as well as academics inquiring into the study of meaning and meaning relations within languages As semantics is a centrally important and inherently cross cutting area within linguistics it will therefore be relevant not just for semantics specialists but for most linguistic audiences The first encyclopedia ever published in this fascinating and diverse field Combines the talents of the world's leading semantics specialists The latest trends in the field authoritatively reviewed and interpreted in context of related disciplines Drawn from the richest most authoritative comprehensive and internationally acclaimed reference resource in the linguistics area Compact and affordable single volume reference format **The American Archivist**, 2007 Includes sections Reviews of books and Abstracts of archive publications Western and Eastern Europe **Logique et analyse**, 2007 *Adaptive and Natural Computing Algorithms* Bernadete Ribeiro, Rudolf F. Albrecht, Andrej Dobnikar, David W. Pearson, Nigel C. Steele, 2005-12-12 The ICANNGA series of Conferences has been organised since 1993 and has a long history of promoting the principles and understanding of computational intelligence paradigms within the scientific community and is a reference for established workers in this area Starting in Innsbruck in Austria 1993 then to Ales in France 1995 Norwich in England 1997 Portoroz in Slovenia 1999 Prague in the Czech Republic 2001 and finally Roanne in France 2003 the ICANNGA series has established itself for experienced workers in the field The series has also been of value to young researchers wishing both to extend their

knowledge and experience and also to meet internationally renowned experts The 2005 Conference the seventh in the ICANNGA series will take place at the University of Coimbra in Portugal drawing on the experience of previous events and following the same general model combining technical sessions including plenary lectures by renowned scientists with tutorials

Strickberger's Evolution Brian Keith Hall, Benedikt Hallgrímsson, Monroe W. Strickberger, 2014 The fifth Edition of Strickberger's Evolution is updated with the latest data and updates from the field The authors took care to carefully modify the chapter order in an effort to provide a more clear and student friendly presentation of course material The original scope and theme of this popular text remains as it continues to present an overview of prevailing evidence and theories about evolution by discussing how the world and its organisms arose and changed over time New boxed features concentrating on modern and exciting research in the field are included throughout the text New and Key Features of the Fifth Edition New Full color design and art program Maintains the student friendly engaging writing style for which it is known A reorganized chapter order provides a more clear and accessible presentation of course material Chapters on the evolution of biodiversity are now found on the text's website Access to the companion website is included with every new copy of the text New boxed features highlight new and exciting research in the field

Conceptual Structures: From Information to Intelligence Madalina Croitoru, Sébastien Ferré, Dickson Lukose, 2010-07-30 The 18 International Conference on Conceptual Structures ICCS 2010 was the latest in a series of annual conferences that have been held in Europe, Asia and North America since 1993 The focus of the conference has been the representation and analysis of conceptual knowledge for research and practical application ICCS brings together researchers and practitioners in information and computer sciences as well as social science to explore novel ways that conceptual structures can be deployed Arising from the research on knowledge representation and reasoning with conceptual graphs over the years ICCS has broadened its scope to include variations from a wider range of theories and related practices among them other forms of graph based reasoning systems like RDF or existential graphs formal concept analysis Semantic Web technologies ontologies concept mapping and more Accordingly ICCS represents a family of approaches related to conceptual structures that build on the successes with techniques derived from artificial intelligence knowledge representation and reasoning applied mathematics and lattice theory computational linguistics conceptual modeling and designed grammatic reasoning and logic intelligent systems and knowledge management The ICCS 2010 theme From Information to Intelligence hints at unveiling the reasoning capabilities of conceptual structures Indeed improvements in storage capacity and performance of computing infrastructure have also affected the nature of knowledge representation and reasoning KRR systems shifting their focus toward

representational power and execution performance Therefore KRR research is now faced with a challenge of developing knowledge representation and reasoning structures optimized for such reasonings

Evolutionary Processes in the Natural History of Religion Hansjörg Hemminger, 2021-09-22 The study of religion by the humanities and social sciences has become receptive for an evolutionary perspective Some proposals model the evolution of religion in Darwinian terms or construct a synergy between biological and non Darwinian processes The results however have not yet become truly interdisciplinary The biological theory of evolution in form of the Extended Evolutionary Synthesis EES is only sparsely represented in theories published so far by scholars of religion Therefore this book reverses the line of view and asks how their results assort with evolutionary biology How can the subject area religion integrated into behavioral biology How is theory building affected by the asymmetry between the scarce empirical knowledge of prehistoric religion and the body of knowledge about extant and historic religions How does hominin evolution in general relate to the evolution of religion Are there evolutionary pre adaptations Subsequent versions of evolutionary biology from the original Darwinism to EES are used in interdisciplinary constructs Can they be integrated into a comprehensive theory The biological concept most often used is co evolution in form of a gene culture co evolution However the term denotes a process different from biological co evolution Important EES concepts do not appear in present models of religious evolution e g neutral evolution evolutionary drift evolutionary constraints etc How to include them into an interdisciplinary approach Does the cognitive science of religion CSR harmonize with behavioral biology and the brain sciences Religion as part of human culture is supported by a complex multi level behavioral system How can it be modeled scientifically The book addresses graduate students and researchers concerned about the scientific study of religion and biologist interested in interdisciplinary theory building in the field

Evolution and Development Alan C. Love, 2024-03-07 The intersection of development and evolution has always harbored conceptual issues but many of these are on display in contemporary evolutionary developmental biology evo devo These issues include 1 the precise constitution of evo devo with its focus on both the evolution of development and the developmental basis of evolution and how it fits within evolutionary theory 2 the nature of evo devo model systems that comprise the material of comparative and experimental research 3 the puzzle of how to understand the widely used notion of conserved mechanisms 4 the definition of evolutionary novelties and expectations for how to explain them and 5 the demand of interdisciplinary collaboration that derives from investigating complex phenomena at key moments in the history of life such as the fin limb transition This Element treats these conceptual issues with close attention to both empirical detail and scientific practice to offer new perspectives on evolution and development This title is also available as Open Access on Cambridge Core

Knowledge Representation and

Relation Nets Aletta E. Geldenhuys, Hendrik O. van Rooyen, Franz Stetter, 2012-12-06 Knowledge Representation and Relation Nets introduces a fresh approach to knowledge representation that can be used to organize study material in a convenient teachable and learnable form The method extends and formalizes concept mapping by developing knowledge representation as a structure of concepts and the relationships among them Such a formal description of analogy results in a controlled method of modeling new knowledge in terms of existing knowledge in teaching and learning situations and its applications result in a consistent and well organized approach to problem solving Additionally strategies for the presentation of study material to learners arise naturally in this representation While the theory of relation nets is dealt with in detail in part of this book the reader need not master the formal mathematics in order to apply the theory to this method of knowledge representation To assist the reader each chapter starts with a brief summary and the main ideas are illustrated by examples The reader is also given an intuitive view of the formal notions used in the applications by means of diagrams informal descriptions and simple sets of construction rules Knowledge Representation and Relation Nets is an excellent source for teachers courseware designers and researchers in knowledge representation cognitive science theories of learning the psychology of education and structural modeling Nature and History Ignazio Masulli, 2019-06-07 Originally published in 1990 Nature and History examines how Darwin s theory of evolution has been expanded by scholars and researchers to include virtually every scientific discipline The book presents a morphological analysis of historical and social sciences sciences which have traditionally have been viewed as too random in their progressions to conform to a model Through the evaluation of empirical and factual evidence the book builds a case for an evolutionary paradigm which encompasses both natural and social sciences and presents the form s adaptiveness in working historical models
