What Is Life? Ed Regis, 2008-04-01 In 1944 the Nobel Prize winning physicist Erwin Schrödinger published a groundbreaking little book called What Is Life In fewer than one hundred pages he argued that life was not a mysterious or inexplicable phenomenon as many people believed but a scientific process like any other ultimately explainable by the laws of physics and chemistry Today more than sixty years later members of a new generation of scientists are attempting to create life from the ground up Science has moved forward in leaps and bounds since Schrödinger's time but our understanding of what does and does not constitute life has only grown more complex An era that has already seen computer chip implanted human brains genetically engineered organisms genetically modified foods cloned mammals and brain dead humans kept alive by machines is one that

demands fresh thinking about the concept of life While a segment of our national debate remains stubbornly mired in moral quandaries over abortion euthanasia and other right to life issues the science writer Ed Regis demonstrates how science can and does provide us with a detailed understanding of the nature of life Written in a lively and accessible style and synthesizing a wide range of contemporary research What Is Life is a brief and illuminating contribution to an age old debate

Life in Nature James Hinton,2025-08-19 Reprint of the original first published in 1875 The Antigonos publishing house specialises in the publication of reprints of historical books We make sure that these works are made available to the public in good condition in order to preserve their cultural heritage **The Nature of Order, Book One: The Phenomenon of Life** Christopher Alexander,2020-03-30 Christopher Alexander s series of ground breaking books including A Pattern Language and The Timeless Way of Building have pointed to fundamental truths of the way we build revealing what gives life and beauty and true functionality to our buildings and towns Now in The Nature of Order Alexander explores the properties of life itself highlighting a set of well defined structures present in all order and in all life from micro organisms and mountain ranges to good houses and vibrant communities In The Phenomenon of Life the first volume in this

four volume masterwork Alexander proposes a scientific view of the world in which all space matter has perceptible degrees of life and sets this understanding of order as an intellectual basis for a new architecture With this view as a foundation we can ask precise questions about what must be done to create more life in our world whether in a room a humble doorknob a neighbourhood or even in a vast region He introduces the concept of living structure basing it upon his theories of centers and of wholeness and defines the fifteen properties from which according to his observations all wholeness is built Alexander argues that living structure is at once both personal and structural Taken as a whole the four books create a sweeping new conception of the nature of things which is both objective and structural hence part of science and also personal in that it shows how and why things have the power to touch the human heart A step has been taken through which these two domains the domain of geometrical structure and the feeling it creates kept separate during four centuries of scientific thought from 1600 to 2000 have finally been united

Who Wrote the Book of Life? Lily E. Kay, 2000 This is a detailed history of one of the most important and dramatic episodes in modern science recounted from the novel vantage point of the dawn of the information age and its impact on representations of nature heredity and society Drawing on archives published sources and interviews the author situates work on the genetic code 1953-70 within the history of life science the rise of communication technosciences cybernetics information theory and computers the intersection of molecular biology with cryptanalysis and linguistics and the social history of postwar Europe and the United States Kay draws out the historical specificity in the process by which the central biological problem of DNA based protein synthesis came to be metaphorically represented as an information code and a writing technology and consequently as a book of life This molecular writing and reading is part of the cultural production of the Nuclear Age its power amplified by the centuries old theistic resonance of the book of life metaphor Yet as the author points out these are just metaphors analogies not ontologies Necessary and productive as they have been they have their epistemological limitations Deploying analyses of language cryptology and information theory the author persuasively argues that technically speaking the genetic code is not a code DNA is not a language and the genome is not an information system objections voiced by experts as early as the 1950s Thus her historical reconstruction and analyses also serve as a critique of the new genomic biopower Genomic textuality has become a fact of life a metaphor literalized she claims as human genome projects promise new levels of control over life through the meta level of information control of the word the DNA sequences and its editing and rewriting But the author shows how the humbling limits of these scriptural metaphors also pose a challenge to the textual and material mastery of the genomic book of life

Theology, Science and Life Carmody Grey, 2023-01-26 Offering a bold intervention in the ongoing debate about the relationship between theology and science *Theology Science and Life* proposes that the strong demarcation between the two spheres is unsustainable theology occurs within and not outside what we call science and science occurs within and not outside theology The book applies this in a

penetrating way to the most topical contentious and philosophically charged science of late modernity biology Rejecting the easy dualism of expressions such as theology and science theology or science modern biology is examined so as to illuminate the nature of both In making this argument the book achieves two further things It is the first major English language reception and application of the thought of philosopher Hans Jonas in theology and it makes a decisive contribution to the unfolding reception of Radical Orthodoxy one of the most influential schools in contemporary Anglophone theology

Deleuze & Fascism Brad Evans, Julian Reid, 2013-05-29 This edited volume deploys Deleuzian thinking to re theorize fascism as a mutable problem in changing orders of power relations dependent on hitherto misunderstood social and political conditions of formation The book provides a theoretically distinct approach to the problem of fascism and its relations with liberalism and modernity in both historical and contemporary contexts It serves as a seminal intervention into the debate over the causes and consequences of contemporary wars and global political conflicts as well as functioning as an accessible guide to the theoretical utilities of Deleuzian thought for International Relations IR in a manner that is very much lacking in current debates about IR Covering a wide array of topics this volume will provide a set of original contributions focussed in particular upon the contemporary nature of war the increased priorities afforded to the security imperative the changing designs of bio political regimes fascist aesthetics nihilistic tendencies and the modernist logic of finitude the politics of suicide the specific desires upon which fascism draws and of course the recurring pursuit of power An important contribution to the field this work will be of great interest to students and scholars of international relations fascism and international relations theory

J. M. Coetzee's Politics of Life and Late Modernism in the Contemporary Novel Marc Farrant, 2024-03-05 Surveying the full breadth of J M Coetzee s career as both academic and novelist this book argues for the necessity of rethinking his profound indebtedness to literary modernism in terms of a politics of life Isolating a particular strain of late modernism epitomised by Kafka and Beckett Farrant claims that Coetzee s writings consistently demonstrate an agonistic engagement with the concept of life that involves an entanglement of politics and ethics which supersedes the singular theoretical frameworks often applied to Coetzee such as postcolonialism posthumanism and animal studies Running throughout his engagement with questions of modernity and colonialism storytelling and life writing human and non human life religion and post Enlightenment subjectivity Coetzee s politics of life yield a new literary cosmopolitanism for the twenty first century a powerful commentary on our interrelatedness that emphasises finitude and contingency as fundamental to the way we live together
