Hall,1977 **Lunar Impact** R. Cargill Hall,2013-01-17 America s first successful attempt at unmanned lunar exploration
Project Ranger culminated in close up television images of the moon s surface Sponsored by NASA and executed by the Jet
Propulsion Lab the project ran from 1959 to 1965 and produced management techniques flight operating procedures and
technology employed by later space missions This official NASA publication presents the complete history of the nine Project
Ranger missions Author R Cargill Hall the historian of the Jet Propulsion Laboratory offers an authoritative account of the
evolution and operations of the continuing program of unmanned exploration of deep space More than 100 photographs
depict key personnel and illustrate rockets and a range of other equipment Nine helpful appendixes feature a fascinating
array of source documents 19th Natural Philosophy Alliance Proceedings Greg Volk,2012-07-14 The Natural Philosophy
Alliance NPA sponsors regular international conferences for presenting high quality papers discussing aspects of philosophy
in the sciences Many papers offer challenges to accepted orthodoxy in the sciences especially in physics Everything from the
micro physics of quantum mechanics to the macro physics of cosmology is entertained Though the main interest of the NPA
is in challenging orthodoxy in the sciences it will also feature papers defending such orthodoxy Our ultimate propose is to
enable participants to articulate their own understanding of the truth All papers are reviewed by society officers and
sometimes by other members before presentation in conferences and they are edit sometimes very significantly prior to
publication in the Proceedings of the NPA **The Lunar Surface Layer** John W. Salisbury,Peter E. Glaser,2013-09-17 The
Lunar Surface Layer Materials and Characteristics focuses on the characteristics nature and materials located in the lunar
surface layer including lunar soil mechanics water vapor adsorption and soil behavior The selection first elaborates on soil
mechanics considerations in the testing of lunar soil models an experimental study in lunar soil mechanics and gravity effects
on soil behavior Discussions focus on cohesion in lunar soils gravity effect on dynamic shear strength of soils porosity soil
bearing strength lunar effects soil cohesion in the lunar environment gradation structure and contact characteristics and
statics and dynamics The book then examines the investigation of soil adhesion under high vacuum water vapor adsorption
behavior of kaolinite after high vacuum storage and sonic velocity and shear strength of possible lunar surface materials
Concerns cover shear strength sonic velocity experimental apparatus and calibration The manuscript takes a look at the
consideration of properties of simulated lunar soil with possible stabilization techniques feasibility of remote compositional

mapping of the lunar surface thermal emission characteristics of mineral dusts and thermal properties of postulated lunar surface materials The selection is highly recommended for researchers wanting to study the lunar surface layer

Meteorological and Geoastrophysical Abstracts ,1967 Current Aspects of Exobiology G. Mamikunian,M. H. Briggs,2013-10-02 Current Aspects of Exobiology covers the philosophical aspects scientific approach and related research problems in exobiology Most of the chapters are presented at the Current Research in Exobiology Symposium held at the Jet Propulsion Laboratory on February 26 28 1963 This book is composed of 10 chapters and begins with an overview of the nature and occurrence of extraterrestrial living matter The next chapters survey certain line of evidence concerning extraterrestrial life including investigation of organo chemical evolution organic remains in meteorites microorganisms of Middle Precambrian Age and the survival capabilities and the performance of earth organisms in simulated extraterrestrial environments These topics are followed by discussions on the interesting issues on the possibility of a primordial lunar life and the possibilities of life on mars A chapter considers the various scientific efforts to detect life outside earth including experiments on small unmanned biological laboratories to the surfaces of the planets Another chapter looks into the possibility of the accidental introduction of terrestrial microorganisms to other planets during the course of space exploration by unmanned spacecraft The concluding chapters explore the potential of radio search for other intelligent species in space Exobiologists and researchers in the related fields of exobiology who are interested in extraterrestrial life will find this book invaluable *Who Owns the Moon?* Virgiliu Pop,2008-11-16 This work investigates the permissibility and viability of property rights on the celestial bodies particularly the extraterrestrial aspects of land and mineral resources ownership In lay

terms it aims to find an answer to the question Who owns the Moon The first chapter critically analyses and dismantles with legal arguments the issue of sale of extraterrestrial real estate after having perused some of the trivial claims of celestial bodies ownership The only consequence these claims have on the plane of space law is to highlight the need for a better regulation of extraterrestrial landed property rights Next the book addresses the apparent silence of the law in the field of extraterrestrial landed property scrutinizing whether the factual situation on the extraterrestrial realms calls for legal regulations The sources of law are examined in their dual dimension that is the facts that have caused and shaped the law of extraterrestrial real estate and the norms which express this law It is found that the norms and rules regarding property rights in the celestial realms are rather limited failing to define basic concepts such as celestial body **Geophysical Abstracts** ,1964

Treatise on Geochemistry ,2013-10-19 This extensively updated new edition of the widely acclaimed Treatise on Geochemistry has increased its coverage beyond the wide range of geochemical subject areas in the first edition with five new volumes which include the history of the atmosphere geochemistry of mineral deposits archaeology and anthropology organic geochemistry and analytical geochemistry In addition the original Volume 1 on Meteorites Comets and Planets was expanded into two separate volumes dealing with meteorites and planets respectively These additions increased the number of volumes in the Treatise from 9 to 15 with the index appendices volume remaining as the last volume Volume 16 Each of the original volumes was scrutinized by the appropriate volume editors with respect to necessary revisions as well as additions and deletions As a result 27% were republished without major changes 66% were revised and 126 new chapters were added In a many faceted field such as Geochemistry explaining and understanding how one sub field relates to another is key Instructors will find the complete overviews with extensive cross referencing useful additions to their course packs and students will benefit from the contextual organization of the subject matter Six new volumes added and 66% updated from 1st edition The Editors of this work have taken every measure to include the many suggestions received from readers and ensure comprehensiveness of coverage and added value in this 2nd edition The esteemed Board of Volume Editors and Editors in Chief worked cohesively to ensure a uniform and consistent approach to the content which is an amazing accomplishment for a 15 volume work 16 volumes including index volume
