Ward], Francis Beckford Ward, 1866 **Symmetry as a Developmental Principle in Nature and Art** Werner Hahn, 1998 Looking beyond the boundaries of various disciplines the author demonstrates that symmetry is a fascinating phenomenon which provides endless stimulation and challenges He explains that it is possible to readapt art to the sciences and vice versa by means of an evolutionary concept of symmetry Many pictorial examples are included to enable the reader to fully understand the issues discussed Based on the artistic evidence that the author has collected he proposes that the new ars evolutoria can function as an example for the sciences The book is divided into three distinct parts each one focusing on a special issue In Part I the phenomenon of symmetry including its discovery and meaning is reviewed The author looks closely at how Vitruvius Polyclitus Democritus Plato Aristotle Plotinus Augustine Alberti Leonardo da Vinci and Durer viewed symmetry This is followed by an explanation on how the concept of symmetry developed The author further discusses symmetry as it appears in art and science as well as in the modern age Later he expounds the view of symmetry as an evolutionary concept which can lead to a new unity of science In Part II he covers the points of contact between the form developing process in nature and art He deals with biological questions in particular evolution The collection of new and precise data on perception and knowledge with regard to the postulated reality of symmetry leads to further development of the evolutionary theory of symmetry in Part III The author traces the enormous treasure of observations made in nature and culture back to a few underlying structural principles He demonstrates symmetry as a far reaching leading structuring causal element of evolution as the idea lying behind nature and culture Numerous controllable reproducible double mirror experiments on a new stereoscopic vision verify a symmetrization theory of perception *The Nature of Paleolithic Art* R. N. Alexander,2023-11-22 A secular redescription of teleology the study of purpose As 20th century geneticist J B S Haldane famously quipped Teleology is like a mistress to the biologist he dare not be seen with her in public but cannot live without her Teleology is the study of the purposes of nature As a scientific discipline it began its celebrated decline in the 17th century with the birth of modern empiricism and continued to plummet apace the rise of the Enlightenment Darwinism and quantum mechanics Those who continued to think nature could be purposeful were primarily spiritualists artists or madmen who credited the guidance of gods muses or fate But could a wholesale rejection of teleology be an overreaction Is there something in the idea as Haldane implies that we need Drawing on her experiences as a complexity theorist novelist and art theorist Victoria N Alexander examines the history and practices of teleology the study of purpose in nature as well as in human behavior She takes us inside paradoxically purposeful self organizing entities which somehow make themselves without having selves yet to do the making and she shows us how poetic like relationships things coincidentally like each other or metaphoric and things coincidentally near each other or metonymic help form organization where there was none before She suggests that it is these chance language like processes that result in emergent design and selfhood thereby offering an alternative to postmodern theories that have unfairly snubbed the purposeful artist Alexander claims that what has been missing from the general discussion of purposefulness is a theory of creativity without which there can be no purposeful action only robotic execution of inherited design Thus revising while reviving teleology she offers us a secular non essentialist conception of selfhood as an achievement that can be more than a momentary stay against the second law
