Suresh Makvana, Ankit Patel, 2019-03-21 **Learning, Motivation, and Their Physiological Mechanisms** Neal E. Miller, 2017-07-28 Neal E Miller's pioneering work in experimental psychology has earned him worldwide respect. This second in a two volume collection of his work brings together forty three of Miller's most important and representative essays on learning, motivation and their physiological mechanisms. They were selected on the basis of their current relevance and their historical significance at the time they were published. In order to emphasize the main themes, essays on a given topic have been grouped together. **Learning, Motivation, and Their Physiological Mechanisms** begins when the author first discovered the thrill of designing and executing experiments to get clear cut answers concerning the behavior of children and of rats. The first study was one of the earliest ones on the behavioral effects of the recently synthesized male hormone testosterone. The second was one of the earliest studies demonstrating the value of using a variety of behavioral techniques to investigate the motivational effects of a physiological intervention. The next studies investigated the satisfying and rewarding effects of food or water in the stomach versus in the mouth and the thirst inducing and reducing effects of hyper and hypotonic solutions respectively injected into the brain. The last study describes a technique devised for extending the analysis of the mechanism of hunger to the effects of humoral factors in the blood. The study is completed with an examination of trial and error learning that was motivated by direct electrical stimulation of the brain and rewarded by the termination of such stimulation. Other studies show that the stimulation via such electrodes not only elicits eating but also has the principal motivational characteristics of normal hunger. The conclusion deals with a series of experiments that overthrows strong traditional beliefs by proving that glandular and visceral responses mediated by the autonomic nervous system are subject to instrumental learning which can be **Neural Mechanisms of Goal-Directed Behavior and Learning** Richard B. Thompson, 2012-12-02 **Neural Mechanisms of Goal Directed Behavior and Learning** provides information pertinent to the neuronal mechanisms of motivation and learning. This text then examines the behavioral investigations that are directed at delineating the role of contiguity and determining the possible mechanisms of reinforcement in classical defense and reward conditioning. Other chapters consider the homeostatic regulation of various functions such as nutrition, temperature, respiration, blood pressure and fluid and electrolyte balance. This book discusses as well the effects of experimental treatments on memory. The final chapter deals with the relationship between perception and memory. **The Economic Analysis of Substance Use and Abuse** Frank J. Chaloupka, Michael Grossman, Warren K.
