C Pezzullo, 2013-10-31 The environment is perhaps most misunderstood as a static place somewhere out there separated from the practices of our everyday lives Given this assumption environmental movements and concerns have remained mostly marginalized or denigrated in cultural studies publications conferences and presentations Recent global developments have made changing this oversight and at times direct resistance to engaging environmental concerns a new priority This edited collection illustrates an appreciation of the dynamic palpable and significant ways the environment permeates culture and vice versa as well as a collective commitment to the ways that cultural studies has more to offer and to learn from taking environmental matters to heart Like foundational categories of identity economics and historical context this collection reminds us why the environment is and should be considered relevant to any work done in the name of cultural studies Including research from four continents and across media the authors offer insights on timely topics such as food tourism human animal relations forests queer theory indigenous rights and water This book was published as a special issue of Cultural Studies *Gardens of New Spain* William W. Dunmire, 2012-08-17 When the Spanish began colonizing the Americas in the late fifteenth and sixteenth centuries they brought with them the plants and foods of their homeland wheat melons grapes vegetables and every kind of Mediterranean fruit Missionaries and colonists introduced these plants to the native peoples of Mexico and the American Southwest where they became staple crops alongside the corn beans and squash that had traditionally sustained the original Americans This intermingling of Old and New World plants and foods was one of

the most significant fusions in the history of international cuisine and gave rise to many of the foods that we so enjoy today. *Gardens of New Spain* tells the fascinating story of the diffusion of plants, gardens, agriculture, and cuisine from late medieval Spain to the colonial frontier of Hispanic America. Beginning in the Old World, William Dunmire describes how Spain came to adopt plants and their foods from the Fertile Crescent, Asia, and Africa. Crossing the Atlantic, he first examines the agricultural scene of Pre-Columbian Mexico and the Southwest. Then he traces the spread of plants and foods introduced from the Mediterranean to Spain's settlements in Mexico, New Mexico, Arizona, Texas, and California. In lively prose, Dunmire tells stories of the settlers, missionaries, and natives who blended their growing and eating practices into regional plantways and cuisines that live on today in every corner of America.
