Topics in Operator Theory Systems and Networks Dym, Gohberg, 2013-11-22 This volume contains the proceedings of the Workshop on applications of linear operator theory to systems and networks which was held at the Weizmann Institute of Science in the third week of June 1983 just before the MTNS Conference in Beersheva For a long time these subjects were studied independently by mathematical analysts and electrical engineers Nevertheless in spite of the lack of communication these two groups often developed parallel theories though in different languages at different levels of generality and typically quite different motivations In the last several years each side has become aware of the work of the other and there is a seemingly ever increasing involvement of the abstract theories of factorization extension and interpolation of operators and operator matrix valued functions to the design and analysis of systems and networks Moreover the problems encountered in electrical engineering have generated new mathematical problems new approaches and useful new formulations The papers contained in this volume constitute a more than representative selection of the presented talks and discussion at the workshop and hopefully will also serve to give a reasonably accurate picture of the problems which are under active study today and the techniques which are used to deal with them
