is an area of management concerned with overseeing designing and controlling the process of production and redesigning
business operations in the production of goods or services It involves the responsibility of ensuring that business operations
are efficient in terms of using as few resources as needed and effective in terms of meeting customer requirements It is
concerned with managing the process that converts inputs in the forms of raw materials labor and energy into outputs in the
form of goods and or services The relationship of operations management to senior management in commercial contexts can
be compared to the relationship of line officers to highest level senior officers in military science The highest level officers
shape the strategy and revise it over time while the line officers make tactical decisions in support of carrying out the
strategy In business as in military affairs the boundaries between levels are not always distinct tactical information
dynamically informs strategy and individual people often move between roles over time Contents 1 Introduction 8 1 1 What is
