**Louis S.B. Leakey** Martin Pickford,1997 This text offers evidence to suggest that many of the established theories and ideas regarding East African geology and anthropology are fundamentally flawed It also offers solutions to safeguard future research and discoveries in these areas

**Rethinking Evolution in the Museum** Monique Scott,2007-11-19 Rethinking Evolution in the Museum explores the ways diverse natural history museum audiences imagine their evolutionary heritage In particular the book considers how the meanings constructed by audiences of museum exhibitions are a product of dynamic interplay between museum iconography and powerful images museum visitors bring with them to the museum In doing so the book illustrates how the preconceived images held by museum audiences about anthropology Africa and the museum itself strongly impact the human origins exhibition experience Although museological theory has come increasingly to recognize that museum audiences make meaning in exhibitions or make their own complex interpretations of museum exhibitions few scholars have explicitly asked how Rethinking Evolution in the Museum however provides a rare window into visitor perceptions at four world class museums the Natural History Museum and Horniman Museum in London the National Museums of Kenya in Nairobi and the American Museum of Natural History in New York Through rigorous and novel mixed methods quantitative and qualitative covering nearly 500 museum visitors this innovative study shows that audiences of human origins exhibitions interpret evolution exhibitions through a profoundly complex convergence of personal political intellectual emotional and cultural interpretive strategies This book also reveals that natural history museum visitors often respond to museum exhibitions similarly because they use common cultural tools picked up from globalized popular media circulating outside of the museum One tool of particular interest is the notion that human evolution has proceeded linearly from a bestial African prehistory to a civilized European present Despite critical growths in anthropological science and museum displays the outdated Victorian progress motif lingers persistently in popular media and the popular imagination Rethinking Evolution in the Museum sheds light on our relationship with natural history museums and will be crucial to those people interested in understanding the connection between the visitor the museum and media culture outside of the museum context

The Cancer Chronicles George Johnson,2013-08-27 When the woman he loved was diagnosed with a metastatic cancer science writer George Johnson embarked on a journey to learn everything he could about the disease and the people who dedicate their lives to understanding and combating it What he discovered is a revolution under way an explosion of new ideas about what cancer really is and where it comes from In a provocative and intellectually vibrant exploration he takes us on an adventure through the history and recent advances of cancer research that will challenge everything you thought you knew about the disease Deftly excavating and illuminating decades of investigation and analysis he reveals what we know and don't know about cancer showing why a cure remains such a slippery concept We follow him as he combs through the realms of epidemiology clinical trials laboratory experiments and scientific hypotheses rooted in every discipline from

evolutionary biology to game theory and physics. Cogently extracting fact from a towering canon of myth and hype, he describes tumors that evolve like alien creatures inside the body, paleo oncologists who uncover petrified tumors clinging to the skeletons of dinosaurs and ancient human ancestors, and the surprising reversals in science's comprehension of the causes of cancer with the foods we eat and environmental toxins playing a lesser role. Perhaps most fascinating of all is how cancer borrows natural processes involved in the healing of a wound or the unfolding of a human embryo and turns them jujitsu like against the body. Throughout his pursuit, Johnson clarifies the human experience of cancer with elegiac grace, bearing witness to the punishing gauntlet of consultations, surgeries, targeted therapies, and other treatments. He finds compassion, solace, and community among a vast network of patients and professionals committed to the fight and wrestles to comprehend the cruel randomness cancer metes out in his own family. For anyone whose life has been affected by cancer and has found themselves asking why, this book provides a new understanding. In good company with the works of Atul Gawande, Siddhartha Mukherjee, and Abraham Verghese, *The Cancer Chronicles* is endlessly surprising and as radiant in its prose as it is authoritative in its eye-opening science.

**The First Human** Ann Gibbons, 2007-04-10 In this dynamic account, award-winning science writer Ann Gibbons chronicles an extraordinary quest to answer the most primal of questions: When and where was the dawn of humankind? Following four intensely competitive international teams of scientists in a heated race to find the missing link, the fossil of the earliest human ancestor, Gibbons ventures to Africa where she encounters a fascinating array of fossil hunters: Tim White, the irreverent Californian who discovered the partial skeleton of a primate that lived 4.4 million years ago in Ethiopia; French paleontologist Michel Brunet who uncovers a skull in Chad that could date the beginnings of humankind to seven million years ago; and two other groups, one led by zoologist Meave Leakey, the other by British geologist Martin Pickford and his French paleontologist partner Brigitte Senut, who enter the race with landmark discoveries of their own. Through scrupulous research and vivid first-person reporting, *The First Human* reveals the perils and the promises of fossil hunting on a grand competitive scale.

**Human Evolution** Brian Regal, 2004-11-23 A fascinating and wide-ranging look at the controversies surrounding the search for the origins of the human species. Written for those new to the subject, *Human Evolution: A Guide to the Debates* presents the remarkable history of our understanding of human origins as it developed from the 1800s to the present. Most works on this topic focus narrowly on one individual theory or debate. In contrast, *Human Evolution* draws from a wide range of sources to offer a fully rounded portrait of the entire field. The chapters of the book follow a basic chronological order, covering the issues, personalities, and discoveries that are central to the questions and controversies surrounding human evolution. The coverage draws from a wide range of associated topics and examines not only controversies of a religious nature but also those that have little to do with religion, allowing readers to weigh the information, come to their own conclusions, and even begin their own debates.

**Palaeontology in Public** Chris Manias, 2025-01-21 Since the establishment of concepts of deep time in the late eighteenth and early nineteenth centuries,

palaeontology has been one of the most high profile sciences Dinosaurs mammoths human ancestors and other lost creatures from Earth s history are some of the most prominent icons of science and are essential for our understanding of nature and time Palaeontology and its practitioners have had a huge impact on public understandings of science despite their often precarious and unsteady position within scientific institutions and networks Palaeontology in Public considers the connections between palaeontology and public culture across the past two centuries In so doing it explores how these public dimensions have been crucial to the development of palaeontology and indeed how they conditioned wider views of science nature the environment time and the world The book provides a history of vertebrate palaeontology through a series of compelling case studies Dinosaurs feature of course including Spinosaurus Winsor McCay s Gertie the Dinosaur and the creatures of Jurassic Park and The Lost World But there are also the small mammals of the Mesozoic South American Glyptodons and human ancestors like Neanderthals and Australopithecines This book shows how palaeontology is defined by its relationship with public audiences and how this connection is central to our vision of the past and future of the Earth and its inhabitants Praise for Palaeontology in Public Surely there is a one way traffic from science to the media In this remarkable collection of papers Chris Manias and the authors explore palaeontological themes from the origin of life to interpretations of human culture through dinosaurs of course and many other fossil taxa Michael J Benton OBE FRS FRSE University of Bristol Palaeontology is a strange science at times arcane yet so accessible that many children dream of hunting for dinosaurs among sun beaten badlands Palaeontology in Public digs into the overlap of these two realms and offers a much needed exploration of how prehistoric beings emerge from stone and enter our collective imagination Riley Black author of Last Days of the Dinosaurs and When the Earth Was Green In this sweeping multi authored compilation reviews consider how ancient animals have been presented to the public for good or for ill From Lucy the australopithecine to Gertie the dinosaur and Jurassic Park never before has so much scholarly content on palaeontology s popularisation been amassed in a single volume Darren Naish vertebrate palaeontologist and author

**New Geospatial Approaches to the Anthropological Sciences** Robert L. Anemone, Glenn C. Conroy, 2018-07-15 Spatial analysis reaches across all the subdisciplines of anthropology A cultural anthropologist for example can use such analysis to trace the extent of distinctive cultural practices an archaeologist can use it to understand the organization of ancient irrigation systems a primatologist to quantify the density of primate nesting sites a paleoanthropologist to explore vast fossil bearing landscapes Arguing that geospatial analysis holds great promise for much anthropological inquiry the contributors have designed this volume to show how the powerful tools of GIScience can be used to benefit a variety of research programs This volume brings together scholars who are currently applying state of the art tools techniques and methods of geographical information sciences GIScience to diverse data sets of anthropological interest Their questions crosscut the typical silos that so often limit scholarly communication among anthropologists and instead recognize a deep structural similarity between the kinds of

questions anthropologists ask the data they collect and the analytical models and paradigms they each use **The Laws of Software Process** Phillip G. Armour,2003-09-25 Within one generation software has become one of the principal sources of wealth in the world The development and use of software has grown faster than for any artifact in the history of the world Probably no topic or subject in history has accelerated in its rate of practice as software has Software development now needs to mature into a disciplined activity to overcome the difficulties that have traditionally plagued it Software developers engineers and project managers need a reference that describes the evolution of software where it has been and where it is going The Laws of Software Process A New Model for the Production and Management of Software reveals a novel and compelling structure for development that redefines the very nature and purpose of software The author explains how in the modern knowledge economy software systems are not products in the classical sense but is the modern medium for the conveyance of information Literally software is the currency of the knowledge basis of wealth in today s society From this definition flows a new assessment of the basics of software development the purpose of methods and processes a comparison of programming languages and an analysis of quality management cost estimation and project management and completion The groundbreaking perspective outlined in this book serves as an expert guide for successful planning and execution of development projects Extinctions Michael J. Benton,2023-09-28 In this vast sweep of our Earths history Michael Benton brings the deep past to life as never before Deploying the cutting edge tools in biology chemistry physics and geology that are transforming our understanding of previous environmental cataclysms including the incredible new discovery of a hitherto unknown extinction event he uncovers not only their lethal effects but also the processes that brought about such large scale destruction Beginning with the oldest extinction Benton investigates the Late Ordovician which set the evolution of the first animals on an entirely new course the late Devonian brought on by global warming the cataclysmic End Permian which wiped out over 90 per cent of all life on Earth and book ending the age of the dinosaurs the newly discovered Carnian Pluvial Event and the End Cretaceous asteroid He examines how global warming acid rain ocean acidification erupting volcanoes and meteorite impact have affected conditions on Earth the drastic consequences for global ecology and how life in turn survived adapted and evolved This expert retelling of scientific breakthroughs allows us to link long ago upheavals to our modern crises As todays climate scientists and political leaders grapple to understand these processes and our planet enters the sixth great extinction these insights from the past may hold the key to survival **El mito de Atapuerca.** Hochadel, Oliver,2013-09-12 Atapuerca ha pasado de ser un nombre casi desconocido a adquirir una resonancia triunfal las excavaciones desarrolladas en esa sierra burgalesa pueden presumir de haber encontrado la mayor acumulaci n mundial de f siles de hom nidos y entre sus logros m s relevantes se cuentan el m s antiguo el primer acto de canibalismo o el primer regalo f nebre del que hay noticia Los responsables cient ficos del proyecto han levantado alrededor del yacimiento una industria de popularizaci n del conocimiento que incluye decenas de libros de divulgaci n documentales televisivos

Ignacio de la Torre Sáinz, 2008-09-01 Muchos acontecimientos científicos han ocurrido en frica desde que Charles Darwin sugiriera en el siglo XIX que los seres humanos se hab an originado en este continente a partir de un antepasado simiesco 150 años despu s de esa propuesta pr cticamente toda la comunidad científica est de acuerdo en sostener que frica es el foco evolutivo originario para la mayor a de las especies humanas que han poblado la Tierra Desde los orígenes de los primeros primates b pedos hasta la aparición de los humanos modernos se concibe al continente africano como escenario principal de la evolución biológica y cultural de nuestra especie Este libro trata sobre buena parte de lo ocurrido en frica en los últimos millones de años de sus características geográficas y ecológicas y sus rasgos geológicos que convirtieron a frica en el escenario ideal para que se desarrollara la evolución humana y para que las evidencias de ese proceso se conservaran De la historia de las exploraciones y descubrimientos que condujo desde muy temprano a estudiar los yacimientos africanos en busca de evidencias de la evolución cultural y biológica del ser humano Y por supuesto trata de ese proceso de evolución física y cultural que se inici cuando algunos primates comenzaron a caminar sobre dos piernas y continu cuando millones de años despu s algunos de ellos empezaron a fabricar herramientas Es este un libro fundamentalmente de Arqueología y se centra por ello fundamentalmente en el periodo a partir del cual esos primates comenzaron a trabajar la piedra Fue ese un momento crítico para la historia de la humanidad y desde entonces la evolución biológica estuvo siempre mediatizada por las adaptaciones culturales Esas manifestaciones arqueológicas constituyen el eje central de este trabajo y es la descripción de las mismas la que sirve en esta obra para subrayar la importancia capital que frica ha tenido para el desarrollo del ser humano      **Man, God, and Civilization** John G. Jackson, 1990      **The Science of Human Evolution** John H.
